- **Brief Summary:**

Seasonal influenza is an acute respiratory infection caused by influenza viruses which circulate in all parts of the world, and the cases are seen to increase during certain months globally.

Adults who are of age 65 years or older, children younger than 5 years, pregnant women, people with chronic diseases (diabetes, hypertension, airway disease and heart disease etc.) are at higher risk for severe illness, so on facing any symptoms or on confirmation should report to nearest health facility.

- **Symptoms**

| Common symptoms                                                                                                                                                      | Other symptoms may include                                                                                                                                                                  |
