#### Geo Spatial Based Decision Support System For Panchayats

# GRAMMANCHITRA APPLICATION

V Udaya Kumar DDG Geospatial Technology & Services Division, NIC uday.kumar@nic.in

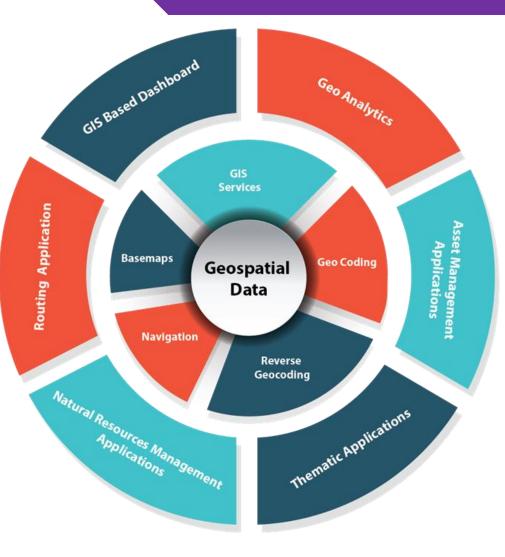

# **Geo-Spatial Framework**

- All India Basemap which is uniform and serve the navigation needs of citizen touching all villages/ habitations of India
- POI database of Govt. assets
- Provide Geo coding/ Reverse Geo coding services
- Provide a GIS framework for data update for any Govt. department on demand
- Navigation services for nearest Govt. locations

### **API Based Integration**

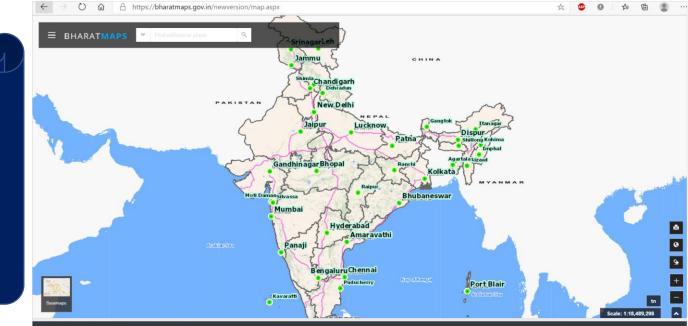

Map Service Sharing

#### **National Portal**

### **State Portal**

# **Bharat Maps**

Bharat Maps is a Multi-layered GIS platform/web service comprising of seamless country wide base maps, satellite images and hybrid maps aligned as per the global geo-spatial standards, It is an essential component of Digital India program to ensure easy, effective and economical governance.

## **GRAM PANCHAYAT FRAMEWORK**

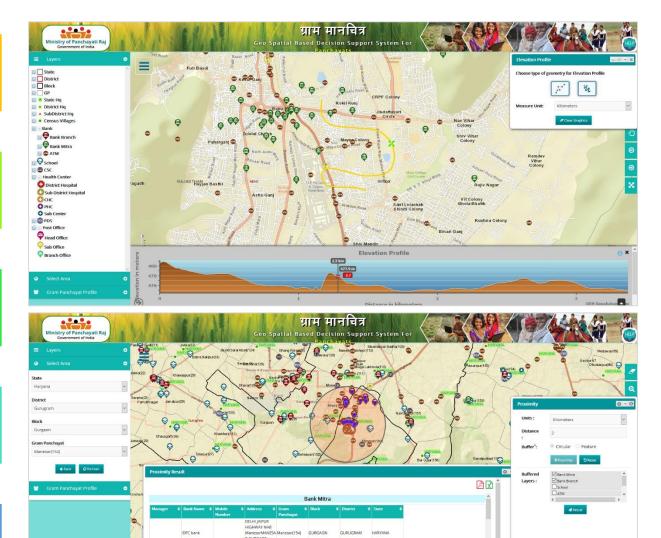

Unified Geo Spatial Platform for Gram Panchayats covering 29 sectors; providing a decision support system for Gram Panchayat Development Plan (GPDP).

Linking relevant data along with geographic data to ascertain objectivity in the planning process.

Spatial analysis tools provisioned of identification suitable site for creation of new amenities/ development work like school, Anganwadi centre etc.

"Real time" tracking of progress of work undertaken under different schemes. Work status displayed in different colors along with geotagged photos of assets on the map.

Gram Panchayat profile with details of Sarpanch, Functionaries, Panchayat office address, demographic data etc. are available.

# **Elevation Profile**

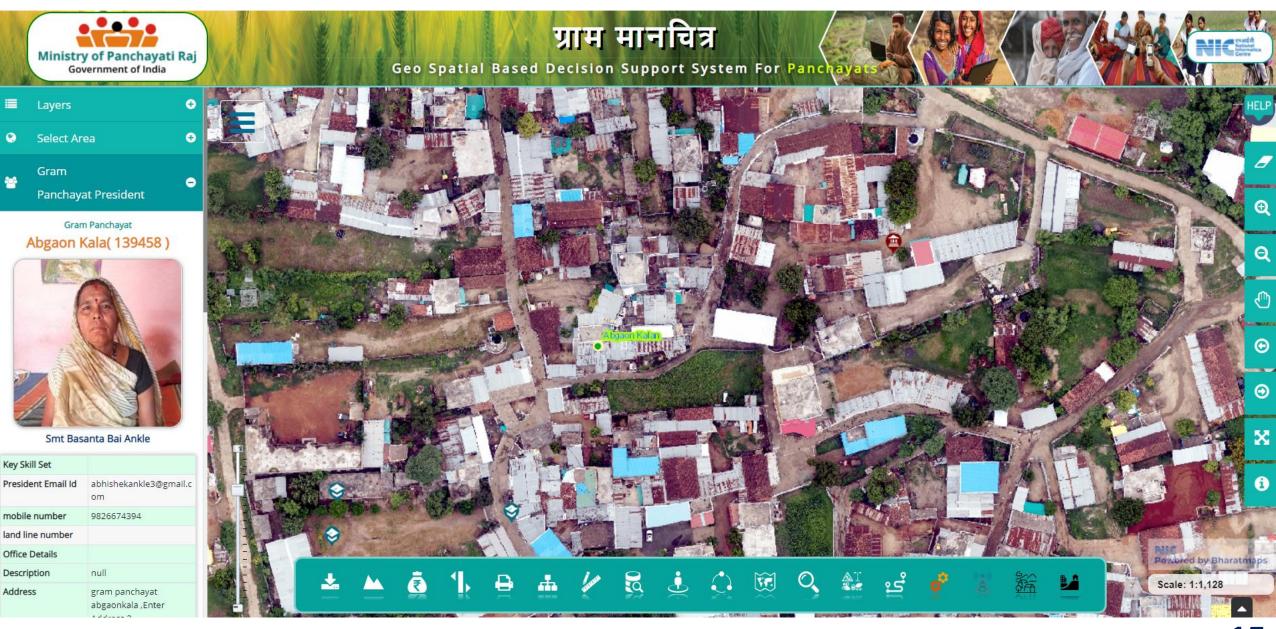

# Swipe Tool

### **Basemaps**

## **SVAMITVA Drone Data Integration**

# Street Light Analysis

- This application is aimed to address the requirement of planning for streetlight laying for any village in gram panchayat.
- The planner has facility to select various lamp types that can be used to light the street of the selected area of interest. for example)High Pressure Mercury Vapor Lamp) High Pressure sodium Vapor lamp) Low Pressure Sodium Vapor Lamp) Light Emitting Diode etc.
- Use can select the measuring units that he is comfortable with based on which planning could be performed. this is similar to a normal surveyor performing the survey of the area, before the lighting could be done.
- Based on the type of lamp selected for lighting, the light coverage is calculated automatically, and number of light pole required are provided to the planner.

# Road Analysis Tool

- This tool helps the administrators/planners/decision makers to calculate the cost of the construction of any road based on its length, width, thickness and type.
- The tool provides the facility to measure the length and width spatially as well as providing these parameters manually through key-board.
- The user has to select the type of road from the list provided.
- Once the cost per unit is given it calculates the cost of the construction for that road which helps the user for budget estimation, fund allocation, planning, etc.

# Drainage Analysis Tool

- This tool is developed to help the user to calculate the cost of a proposed drainage network.
- The user needs to select the pipe type from the list already provided. Then the path of the drainage network has to be defined spatially so that the tool uses the elevation profile feature of the application to calculate the differential elevation between the consecutive points.
- It can calculate the trenching/digging cost, number of pipes required, pipe cost and at the end the total cost for the network excluding the construction material cost.

# PDS Locator Tool

- This tool is developed to help the user visualize nearest Fair price shop
- The tool provides the village population and distance from the census village to reach the fair price shop
- The basemap functionality allows the user to visualize under various terrain types
- The SVAMITVA drone image provides the near real-time locational intelligence

## AMIPUR GRAMPANCHAYAT (AMBALA, HARYANA)

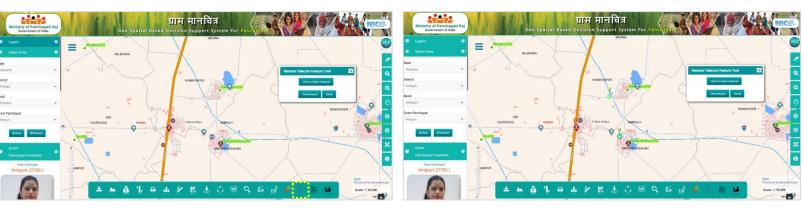

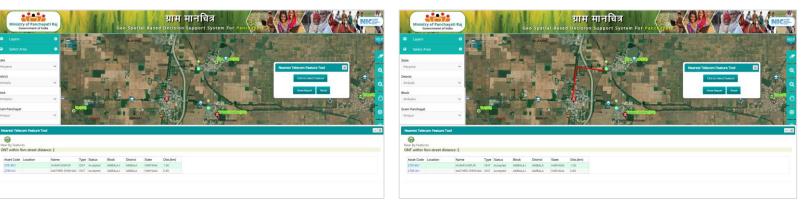

# Nearest Telecom Asset

- This tool is developed to help the user to provide the feasibility of providing telecom / internet connectivity
- Scenario
  - We have a Bank Branch as shown, which need to be provided with Telecom / Internet connectivity
  - The tool allows to select the Bank Branch
  - The Report tab shows the nearest telecom intercept device
  - It provides multiple nearest devices which can be approached for testing the feasibility
  - Select one of the device to visualize the track for navigation along with road distance

## AMIPUR GRAMPANCHAYAT (AMBALA, HARYANA)

# Service Area Tool

# MOHRI VILLAGE (AMBALA, HARYANA)

- This tool is developed to help the user search for nearby assets from the selected nearby census village
- Scenario:
  - Select the icon to invoke the service area tool
  - Provide two areas based on requirement
  - Select the asset that we plan to avail service for example ATM, Schools etc.
  - Select any census village
  - The tool automatically highlights the selected assets
  - The show report button provides a list of selected assets in tabular view for navigation

# SVAMITVA Data Analytics

- This tool is developed to help the user visualize the property parcels based on various parameters captured by state departments during drone survey
- The major parameters captured and available for visualization are as follows:
  - Ownership of Land
  - Landuse of Land under study
  - Religion of Landowner
- The tool also includes the property card associated with the land with following information:
  - Owner Land Type
  - Land Area (SQ Meters)
  - Owner Name
  - Father Name
  - Landuse etc.

### SALYAKHEDI VILLAGE

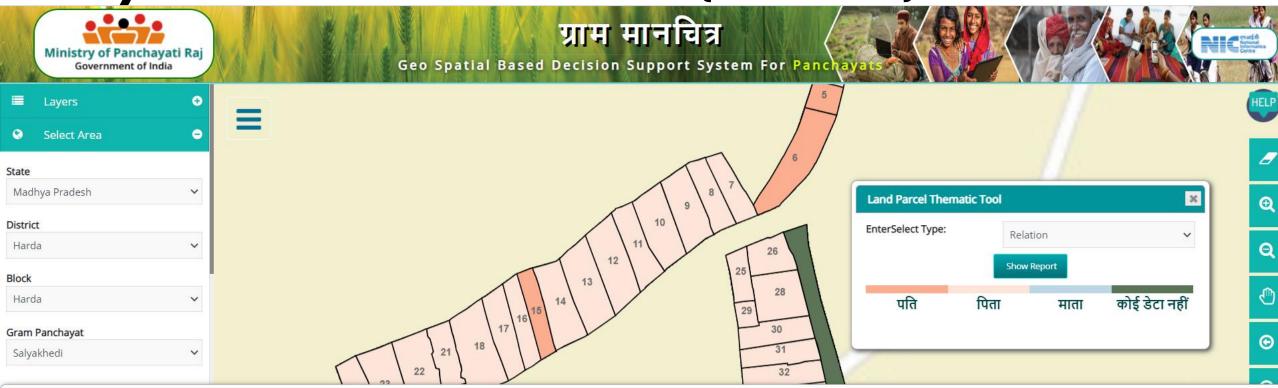

# Analytics – Land Parcel based (Ownership)

Note: The Numbers displayed on parcels are the property parcel numbers
