POLLUTION UNDER CONTROL CERTIFICATE (PUC) SYSTEM

AI Enhanced PUC System for Secure & Accurate Vehicle Compliance

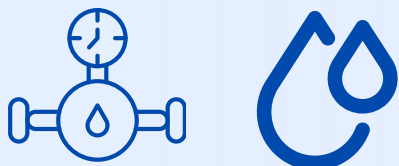

- AI driven anti spoofing module detects fake, manipulated, or reused images with high accuracy.
- Automated number plate recognition and vehicle classification using the Vahan database, significantly reducing manual errors.
- Strong data integrity controls ensure that all images and videos are captured in real time at the testing centre through continuous video analysis.
- Advanced data pattern analysis identifies fake or simulated pollution certificate issuance by detecting anomalous and suspicious activity patterns.

RAG POWERED BOT FOR FPO-ODISHA & SATHI (SEED AUTHENTICATION, TRACEABILITY & HOLISTIC INVENTORY)

Natural language based AI Assistance for Agricultural community

RAG fetches the most relevant data from databases or documents first, then uses that data to generate accurate, context-aware answers.

- Breaks down complex scheme guidelines into simple, understandable language.
- Ensures responses are accurate and sourced directly from official documents.
- Offers a conversational interface for easy and interactive query resolution.

AI BASED DOCUMENT VERIFICATION IN ADMISSION

Authentic documents, Accurate data

AI models for document verification leverage advanced technologies such as Optical Character Recognition (OCR), Machine Learning (ML), and Natural Language Processing (NLP) to enhance accuracy, speed, and security in document verification.

- Identify the authenticity of the document(s) uploaded by candidates.
- Document quality (readability) evaluation.
- Data classification and extraction from documents uploaded.
- Check duplicate/merge documents.

AI-ENHANCED INTEGRATED NATIONAL DOCUMENT VERIFICATION SYSTEM (INDOCS)

AI Powered Document Verification for Faster Services

The INDOCS platform has been designed with an AI-powered document extraction and verification system for secure and accurate processing across Transport services.

- **Automated Analysis & Field Extraction:** Advanced OCR and deep-learning models extract key fields from different documents and certificates.
- **Document Classification & Fraud Detection:** Detects document type and flags tampered, low-quality, or duplicate uploads using AI-driven checks.
- **Seamless Sarathi/Vahan Integration:** Unified backend for secure document storage, retrieval, and verification within existing workflows.
- **Fast & Reliable Digital KYC:** Speeds up Transport Service processing with accurate AI-assisted verification, reducing manual efforts.

E-MEDICLAIM- AUTOMATED, ACCURATE, AND TRUSTED MEDICAL CLAIMS SETTLEMENT

Automatic extraction of data from scanned mediclaim documents using OCR and AI, converting unstructured images and PDFs into clean, structured digital data. This structured information is then securely validated and passed to the backend system for faster and more accurate claim processing.

Document Automation

OCR-based reading of prescriptions, bills, and discharge summaries to auto-extract data and reduce manual work.

Fraud Detection

AI/ML analyzes claim patterns to detect anomalies and flag duplicate or suspicious claims.

Predictive Processing

AI predicts claim validity and expected approval amounts to speed up decisions.

Analytics & Insights

AI dashboards provide trends, bottleneck alerts, and future claim workload forecasts.
