 103. **ANSWER** The function of the **QUESTION** is to **ANSWER** the **QUESTION**.

3

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

2. Next, gather relevant information and data. This can be done through research, consultation with experts, or by analyzing existing data sets.

3. Once the information is gathered, it is important to analyze it carefully. This involves identifying patterns, trends, and potential solutions.

4. After analysis, the next step is to develop a plan or strategy. This should take into account the available resources and the constraints of the situation.

5. The final step is to implement the plan and monitor the results. It is important to be flexible and willing to adjust the plan as needed based on the outcomes.
