PREFACE

Agriculture plays an important role in a most developed State like Haryana. Consequently, the consumption pattern of cultivators determines the growth of economy of the State. The Study on “Family Budget of Cultivators in Haryana” analyses the household income from different sources, household expenditure and consumption pattern of 119 selected households.

The study of selected households indicates an average annual income of ₹ 340378 per household and expenditure of ₹ 264891 leaving an annual surplus of ₹ 75487 during the agricultural year 2011- 12. The main source of household income was from farm cultivation which contributed 56.79% of the household income. A major portion i.e. 52.07% of the total expenditure was incurred on food items whereas the remaining 47.93% accounted for non-food items.

The report has been prepared by Smt. Rani, Research Officer with the assistance of Sh. Karambir Singh, Assistant Research Officer and Smt. Krishna Sharma, Jr. Scale Stenographer under the supervision of Sh. Jagdish Chander, Dy. Director and overall guidance of Sh. J.S. Dalal, Joint Director (Statistics). The useful work done by them for bringing out the report is acknowledged. Efforts have been made to improve the quality of the report. Suggestions, if any, for further improvement are welcome.

I hope, this report will prove useful to planners, policy makers, sociologists and administrators who are interested in socio-economic development of the cultivators. This report is also placed on the Departmental website which can be accessed at www.esaharyana.gov.in.

I am thankful to all the selected cultivators of Haryana for maintaining and providing the requisite information. The cooperation extended by the District Statistical Officers and their staff in furnishing the basic data and scrutiny of cultivators records for finalising the study is gratefully acknowledged.

CHAPTER -I

INTRODUCTION

1.0 General

The study on “Family Budget of Cultivators” in Haryana has been undertaken by selecting 119 cultivator households one from each Block in the State. The period of study is agricultural year 2011-12 i.e. from July 2011 to June 2012. The study aims at analysing sources of income and expenditure of the selected cultivators. An attempt has been made to find out the sources of income, pattern of domestic expenditure, dietary habits, standard of living and proportion of consumption of goods produced at farm and purchased from outside.

1.1 Objectives of the Study

The objectives of the study are as under:-

- i) To find out the extent of contribution by different sources to household income
- ii) To study the pattern of their domestic expenditure.
- iii) To find out the proportion of consumption of goods produced at farm and of those procured from outside.
- iv) To examine the dietary habits of cultivators and their overall standard of living.
- v) To study the impact of the size of holdings on income and expenditure.

1.2 Methodology

For the main study i.e. "Economics of Farming in Haryana", 238 holdings were selected, two from the each block in all the districts of the State, keeping in view the size of holdings, willingness and capability of the cultivators in maintaining the day-to-day record of their income and domestic expenditure in the prescribed format, 119 out of 238 households, one from each block was selected for conducting the study on "Family Budget of Cultivators in Haryana". The results extracted in this study are purely indicative in nature because of the small sample size.

The data is collected from selected cultivators through District Statistical Officers. The selected cultivators were imparted necessary training and ₹ 500/- per annum was given to them as an honorarium for recording the data on income and expenditure of the household in the prescribed schedules. The timely supervision was done by the staff of Headquarter and District Statistical Offices to ensure proper recording and accuracy of data.

CHAPTER-II

Sources of Income of Cultivators

2.0 General

Introduction of improved technology in the field of agriculture has encouraged the cultivators in the State to adopt latest farm practices, thus enabling them to increase their farm yield per hectare as well as income. To increase their earnings, the cultivators have also diversified their economic activities into dairy farming, poultry and other small enterprises.

2.1 Household size

The size of the family is ranged from 6 to 8 members. The average size of family was, however, 6. This simple average does not provide a true picture of household size in terms of consumption as it gives equal weightage to the children and women. Therefore, the Atwater's scale of Adult Male Unit (Appendix –II) has been applied to work out the true family size of the cultivators. Children and women do not equalize male adult and are, therefore, to be converted to adult male units in order to ascertain their real capacity to earn and spend. This conversion is universally applied in National Sample Survey and other allied surveys conducted through out the country. According to the "Atwater's Scale of Adult Male Unit of the Chinese Farm Economy by Buck", the average size of family worked out to 5. The selected households members and adult male units have also been classified according to size of holdings in Table 2.1.

Table 2.1 Number of households and household members according to size of holdings

| Sr.No | Size of Holdings (Hectares) | Total number of | | Average no. of Adult male unit | Average no. of members per household | Average no. of adult male unit per household |

| | | Households | Members | | | |

| Total | | 119 | 770 | 646.9 | 6.47 | 5.44 |

The above table shows that average number of members per household in 119 selected families was 6. The maximum average household size of 8 members was observed in the households belonging to the holding size group of 10.0 and above hectares whereas it was minimum of 6 members in the households pertaining to holding size group of below 2.0 hectares.

2.2 Sources of income

The income of the cultivators has been classified into following four broad categories:-

- i) Farm cultivation.
- ii) Milk and milk products.
- iii) Interest on capital investment (It includes farm equipments and machinery, farm and residential buildings, milch animals and durable household goods).
- iv) Income from miscellaneous sources such as rent received from leased out land, remittances received from outside, imputed value of fuel, wood & dung cakes, sale of farm yard manure, income from sources other than farm cultivation etc.

2.3 Net Income of selected cultivators

The source-wise annual average net income per household, per capita and per adult male unit is presented in Table 2.3.

Table 2.3 Net Income of selected cultivators

| Sr. No. | Source | Total income (All households) | Average income per | | |

Note: Figures in brackets indicate the percentages to the total.

It is observed from the above table that the main source of income of farming families during 2011-12 was farm cultivation which accounted for 56.79% of their total income. The contribution of the other three sources i.e. (i) milk and milk products (ii) capital investment and (iii) Miscellaneous was 5.91% ,14.38% and 22.92% respectively. The average annual income per family, per capita and per adult male unit has been worked out to ₹ 340378, ₹ 52604 and ₹ 62614 respectively during the year 2011-12.

2.4 Net Income from farm cultivation

The net income from farm cultivation has been worked out after taking into account the gross income and expenditure on various items of input like hired manual labour, bullock labour, seeds, fertilizers, implements & machinery, tubewells & pumping sets etc. Table 2.4 gives in brief the gross income, total expenditure and net income of selected cultivators.

2.4 (a) Income from farm cultivation and size of holdings

In order to assess the impact of size of holdings on the annual farm income of a household, the size-wise average income per household, per capita and per adult male unit have been worked out. The detail in this regard is presented in Table 2.4 (a).

Table 2.4 (a) Income from farm cultivation (Size-wise)

The above table depicts that the minimum average income per household from farm cultivation of the households belonging to the holding size group of below 2.0 hectares was ₹ 85372 whereas the maximum average income was recorded as ₹ 885093 in the size

group of 10.0 and above hectares. The average income per capita was as ₹ 14656 which is lowest in the size group of below 2.0 hectares and it was highest ₹ 110637 in the size group of 10.0 and above hectares.

2.5 Income from milch animals and milk products

The net income of all the selected households from milk and milk products and milch animals was worked out to ₹ 2395626 during agricultural year 2011-12. The following table indicates the total number of milch animals owned, milk produced and the income accrued therein.

Table 2.5 Average number of milch animals owned, milk produced and income accrued.

| 8. | Net income per household (₹) | 16000 | 19041 | 34307 | - | 20131 |

The above table shows that the cultivators normally prefer to keep buffaloes for milk production because they yield more milk as compared to cows. The cows were mainly kept for the purpose of supplying male calves to be ultimately used as bullocks in the fields.

The annual milk production of all 182 milch animals possessed by 119 households was 3223.37 quintals worth ₹ 10076081 and the milk produced per annum per family was 27.09 quintals. The net income per household per annum from milch animals after meeting out all the maintenance expenditure was ₹ 20131.

2.5 (a) Income from milk production

The total income from milk production of all the selected households has further been classified according to size of holdings to find out the correlation between the income from milk production and the size of holding pertaining to a household in the following table:-

2.6 Income from capital investment

14.38% of the annual income of the selected households was accrued from capital investment. The imputed income by way of interest @ 9% per annum from capital investment on items such as milch and draught animals, farm equipments and machinery, farm and residential buildings, cattlesheds, wells, tubewells & pumping sets and durable goods is given in Table 2.6.

It may also be observed that the lowest average income of ₹ 30184 per household was recorded in the size group of below 2.0 hectares and the highest of ₹ 104450 was registered in the size group of 4.0-7.5 hectares.

2.7 Income from miscellaneous sources

The contribution of miscellaneous sources to the total income of the cultivators was 22.92 percent. The income from miscellaneous sources has further been classified into nine different categories. The details are presented in Table 2.7.

| Total | | 9282412 (100.00) | 78003 |

Table 2.7 indicates that the annual total income of all the selected households from miscellaneous sources amounted to ₹ 9282412. An average annual income of a family from this source was ₹ 78003. The highest contribution of 56.31% came from remittances received from outside followed by 19.68% from pension, 9.57% from leased out land and 6.09% from fuel. The remaining contribution of 8.35 % was from rent, manure, honorarium for keeping records of farm accounts and family budgets, family labour and others.

2.7 (a) Income from miscellaneous sources according to size of holdings

In order to study the effect of size of holdings of a household on its income from miscellaneous sources, the total income from this source has further been classified in table 2.7 (a).

Table 2.7 (a) Income from miscellaneous sources (size-wise)

| Size of holdings (Hectares) | Total Income from miscell- aneous sources | Average income per | | |

| Total | 9282412 | 78003 | 12055 | 14349 |

The above table depicts that the highest annual average income of ₹ 115427 per household from miscellaneous sources was observed in the size group of 10.0 & above hectares whereas it was lowest of ₹ 36590 in the holding size group of 7.5 -10.0 hectares . However, the average income per household, per capita and per adult male unit is worked out to ₹ 78003, ₹ 12055 and ₹ 14349 respectively during the year 2011-12. There is no correlation between the size of holdings and average income per household, per capita and per adult male unit in case of miscellaneous.

2.8 Income of cultivators according to size of holdings from all sources

It is observed that the size of holdings has a significant effect on the income of the cultivators. Generally, the average income of cultivators increases due to increase in the size of holdings because farmers with large holdings follow better agricultural practices and can afford a better package of inputs. The detail of income of cultivators according to size of holdings is given in Table 2.8.

CHAPTER-III**Household Expenditure of Cultivators****3.0 General**

An attempt has been made to throw light on the expenditure made on food and non-food items, annual and daily consumption of food, input and output of milk production and overall financial position of the selected cultivators. The detailed study of the household expenditure of cultivators has been made under the eleven major heads.

3.1 Household expenditure of selected cultivators

The broad head wise household expenditure per family, per capita and per adult male unit is shown in Table 3.1.

The table also throws light on the dietary habits of cultivators and clearly establishes that Cultivators of Haryana are primarily vegetarian. Their expenditure on milk and milk products was the highest i.e. 67.55% followed by cereals 9.14%, Misc.5.83%, suger 4.39%, vegetables 4.35%. The expenditure on meat and meat products was only 0.25%. It is found that 85.19 % of the household expenditure was on cereals, pulses, milk& milk products, edible oils and sugar.

3.5 Consumption of food articles

The annual and daily consumption of various food articles like cereals, pulses, milk & milk products, edible oils, sugar etc. has also been worked out in Table 3.5 to study the dietary habits of the cultivators.

3.6 Cost of production of milk

Since 67.55% of the total expenditure on food items was incurred on milk and milk products only, hence, it has become essential to discuss in detail the cost of production of milk. The cost of milk production per quintal both for buffaloes and cows has been worked out by taking into account the various variable and fixed costs. Variable cost includes expenditure on items such as fodder, concentrates, labour (family and hired) medical care etc. and fixed cost includes interest and depreciation on capital investment made on milch animals and cattlesheds etc.

The cost per quintal and quantity of milk produced is given in the following table:-

3.8 Annual consumption of sugar, gur & shakkar

It is observed that the 4.39% of the total food expenditure was incurred on sugar, gur and shakkar. Therefore, it has become essential to work out the annual consumption of sugar per household. The following table depicts the average quantity and current value of sugar consumed per household, per capita and per adult male unit.

Table 3.8 Annual consumption of sugar

| Quantity | Purchased | | | Consumption of sugar per household | | | Consumption of sugar | |

3.13 Possession of household assets

The possession of various household assets by the selected families is an indicative of their financial position and clearly reflects their standard of living. To study the improvement in standard of living of the selected households, the information pertaining to the possession of various household items is presented in Table 3.13

Table 3.13 Possession of household assets by selected cultivators during the year 2010-11 and 2011-12

The above table reveals that 60.50% of the total households were found in possession of motor cycle/ scooter in the year 2011-12. 63.03% of the total households were

having refrigerators . Television has become the main necessity for the cultivator households in Haryana as 68.07% of the households were found in possession of a television. The table further reveals that bicycle is not the common means of transport as 7.56 % selected families were having bicycles.

It is inferred from the above table that standard of living of household cultivators has improved in 2011-12 as compared to 2010-11 as reflected from the increase in number of motorcycle/scooter and television.

3.14 Financial position of the selected households

The overall financial position of the households has been worked out taking into account their gross income and expenditure. The net surplus income according to size of holdings has also been worked out in Table 3.14.

| Total | 340378 | 52604 | 264891 | 40938 | 75487 | 11666 |

The above table reveals that on an average, a household spent ₹ 264891 against the income of ₹ 340378, thus leaving an annual surplus of ₹ 75487 during the year 2011-12. This shows that families with large size of holdings were economically better than the families with small size of holdings.

CHAPTER – IV
Summary and Conclusion

An attempt has been made to know the major sources of income & expenditure of the cultivators in the State. The present study highlights the consumption pattern of households, their dietary habits and extent of dependence on goods other than those produced at their own farm.

The main findings of the study based on the analysis of data collected from 119 sample cultivators are as under :-

1. The average size of the household was worked out to 6 members. According to Atwater's Scale, the average size of the family was 5 adult male unit.
2. The average income per household was ₹ 196531 in the holding size group of below 2.0 hectares which progressively increased to maximum of ₹ 1122853 in the size group of 10 & above hectare.
3. Income from farm cultivation 56.79% and dairying 5.91 %, together accounted for 62.70 % of the total income accruing to the cultivator households. Out of the remaining income of 37.30 %, income generated from imputed interest on capital investment was 14.38 % and from other miscellaneous sources such as remittances from outside, income from labour etc was 22.92 %.
4. During the agricultural year 2011-12, the average annual income and expenditure of the sample households were ₹ 340378 and ₹ 264891 respectively, leaving an average annual surplus of ₹ 75487. The corresponding per capita income, expenditure and surplus were ₹ 52604, ₹ 40938 and ₹ 11666 respectively.
5. 52.07 % of the cultivator household expenditure was on food alone. Education accounted for 11.59 %, housing 10.60%, clothing 7.77%, marriage and social ceremony 4.35 % of the total domestic expenditure. The remaining 13.63 % was on fuel, lighting, health, transport, religious ceremonies and others.
6. Milk and milk products formed the major portion of normal intake of a cultivator's food as 67.55% of the total food expenditure on food items was incurred on milk & milk products,

11.42 % on cereals & pulses, 7.00 % on fruits & vegetables, 4.39 % on sugar and remaining 9.64% on miscellaneous and other items.

7. Majority of the cultivators in Haryana are vegetarian and the expenditure on non-vegetarian food items is not significant i.e. 0.25%.

8. The study reveals that a farming family sold 24.60 % of buffaloes milk and the rest was retained to meet domestic requirements. The daily consumption of milk and milk products per adult male unit was 1221 grams.

9. The cost of production of milk per quintal in respect of buffaloes and cows is worked out to ₹ 2382.74.

10. Motor cycle was the most common mode of domestic transport i.e. 60.50% families are using motor cycles and 7.56% of the households are having bicycle.

11. Television is the main source of entertainment for maximum number (68.07%) of farm families.

It is interesting to note that the standard of living of the cultivators in Haryana is improving as the percentage of sample cultivators owning items of comforts and luxuries is increasing as all the cultivators owned at least one fan, 63.03% refrigerators, 59.66% Gas connections, 33.61% sewing machines and 31.09 % pressure cookers.
