PREFACE

Agriculture plays an important role in the economy of Haryana State. Income and consumption pattern of cultivators determines the growth of economy of the State to a great extent. The present study on “Family Budget of Cultivators in Haryana” analyses the income from different sources, household expenditure and consumption pattern of 120 selected cultivator households.

I am thankful to Smt. Rani, Research Officer for preparing this report under the supervision of Sh. R.S. Kamboj, Deputy Director, Dr. Rajvir Bhardwaj, Joint Director and overall guidance of Dr. Nathu Ram Sheoran, Additional Director. The assistance rendered by Sh. CHAPTER –I

INTRODUCTION

1.0 General

The study on “Family Budget of Cultivators” in Haryana has been undertaken by selecting 120 cultivator households (one from each Block) in the State. The period of study is agricultural year 2013-14 i.e. from July 2013 to June 2014. The study aims at analysing sources of income and expenditure of the selected cultivators. An attempt has been made to find out the sources of income, pattern of domestic expenditure, dietary habits, standard of living and proportion of consumption of goods produced at farm and purchased from outside.

1.1 Objectives of the study

The objectives of the study are as under:-

- i) To find out the extent of contribution by different sources of household income;
- ii) To study the pattern of their domestic expenditure;
- iii) To find out the proportion of consumption of goods produced at farm and of those procured from outside;
- iv) To examine the dietary habits of cultivators and their overall standard of living;
- v) To study the impact of the size of holdings on income and expenditure.

1.2 Methodology

For the main study i.e. "Economics of Farming in Haryana" 240 holdings were selected (two from the each Block) in the State, keeping in view the size of holdings, willingness and capability of the cultivators in maintaining the day-to-day record of their income and domestic expenditure in the prescribed schedules, 120 out of 240 households, one from each Block was selected for conducting the study on "Family Budget of Cultivators in Haryana". The results extracted in this study are purely indicative in nature because of the small sample size.

The data is collected from selected cultivators under supervision of District Statistical Offices to ensure proper recording and accuracy of data. The selected cultivators were imparted necessary training and ₹ 500/- per annum was given as honorarium for recording the data on income and expenditure of each household in the prescribed schedules. The supervision was also done by the staff of Headquarter.

CHAPTER-II

Income of Cultivators

2.0 General

Introduction of improved technology in the field of agriculture has encouraged the cultivators in the State to adopt latest farm practices, thus enabling them to increase their farm yield per hectare as well as income. To increase their earnings, the cultivators have also diversified their economic activities into dairy farming, poultry and other small enterprises. For the present study, the income of the selected cultivators has been classified into following four broad categories:-

- i) Farm cultivation;
- ii) Milk and milk products;
- iii) Interest on capital investment (It includes farm equipments and machinery, farm and residential buildings, milch animals and durable household goods);
- iv) Income from miscellaneous sources such as rent received from leased out land, remittances received from outside, imputed value of fuel, wood & dung cakes, sale of farm yard manure, income from sources other than farm cultivation etc.

2.1 Household size

The size of the selected cultivator families ranged from 6 to 8 members. However, the average size of family was 6. This simple average does not provide a true picture of household size in terms of consumption as it gives equal weight-age to the children and women. Therefore, the Atwater's scale of Adult Male Unit (Appendix –II) has been applied to work out the true family size of the cultivators. Children and women do not equalize male adult and are, therefore, to be converted to adult male units in order to ascertain their real capacity to earn and spend. This conversion is universally applied in National Sample Survey and other allied surveys conducted throughout the country. According to the "Atwater's Scale of Adult Male Unit of the Chinese Farm Economy by Buck", the average size of family worked out to 5. The selected households members and adult male units have also been classified according to size of holdings in Table 2.1

The table 2.1 shows that average number of members per household in 120 selected families was 6. The maximum average household size of 8 members was observed in the households belonging to the holding size group of 10.0 and above hectares whereas

it was minimum of 6 members in the households pertaining to holding size group of below 2.0 hectares during the year 2013-14.

2.2 Net income of selected cultivators

The source-wise annual average net income per household, per capita and per adult male unit of the selected cultivators during the agricultural year 2013-14 is presented in Table 2.2.

Total		48816727 (100.00)	406806	65176	78928

Note: Figure in brackets indicate the percentages to the total.

It is observed from the above table that the main source of income of farming families was farm cultivation which accounted for 51.71% of their total income.

The contribution of the other three sources i.e. (i) milk and milk products (ii) capital investment and (iii) Miscellaneous, were 5.73%, 18.21% and 24.35% respectively. The average annual income per family, per capita and per adult male unit have been worked out to ₹ 406806, ₹ 65176 and ₹ 78928 respectively.

2.3 Income of cultivators according to size of holdings

It is observed that the size of holdings has a significant effect on the income of the cultivators. Generally, the average income of cultivators increases with the increase in the size of holdings because farmers with large holdings follow better agricultural practices and can afford a better package of inputs. The detail of income of cultivators according to size of holdings during the year 2013-14 is given in Table 2.3.

It was also observed that per household annual income in the holding size of 10.0 & above hectares was ₹ 1378034 which was 4.61 times higher than the income of ₹ 298469 in the holdings size of below 2.0 hectares. The overall average annual income per household, per capita and per adult male unit from all sources were ₹ 406806, ₹ 65176 and ₹ 78928 respectively.

2.4 Income from farm cultivation

The net income from farm cultivation has been worked out after taking into account the gross income and expenditure on various items of input like hired manual labour, bullock labour, seeds, fertilizers, implements & machinery, tubewells & pumping sets etc. Table 2.4 gives in brief the gross income, total expenditure and net income of selected cultivators during the year 2013-14.

It has been observed that the average farm income per household, per capita and per adult male unit were worked out to ₹ 210372, ₹ 33705 and ₹ 40816 per annum respectively.

2.4 (a) Net income from farm cultivation and size of holdings

In order to assess the impact of size of holdings on the annual farm income of a household, the size-wise average net income per household, per capita and per adult male unit have been worked out. The detail in this regard is presented in Table 2.4 (a) below:-

Table 2.4 (a) Net income from farm cultivation (Size-wise)

The above table depicts that the minimum average net income per household from farm cultivation of the households belonging to the holding size group of below 2.0 hectares was ₹ 111964 whereas the maximum average income was recorded as ₹ 866010 in the size group of 10.0 and above hectares. The average income per capita was as ₹ 19085 which is lowest in the size group of below 2.0 hectares and it was highest ₹ 108251 in the size group of 10.0 and above hectares.

2.5 Income from milch animals and milk products

The net income of all the selected households from milk and milk products and milch animals was worked out to ₹ 2797545. The following table 2.5 indicates the total number of milch animals owned, milk produced and the income accrued therein of selected cultivators during the year 2013-14 :-

8.	Net income per Household (₹)	17105	22569	40544	-	23313

The above table shows that the cultivators normally prefer to keep buffaloes for milk production because they yield more milk as compared to cows. The cows were mainly kept for the purpose of supplying male calves to be ultimately used as bullocks in the fields. The annual milk production of all 184 milch animals possessed by 120 households was 3367.73 quintals worth ₹ 12059906 and the milk produced per annum per family was 28.06 quintals.

The net income per household per annum from milch animals after meeting out all the maintenance expenditure was ₹ 23313.

2.5 (a) Net income from milk production

The total income from milk production of all the selected households has further been classified according to size of holdings to find out the correlation between the income from milk production and the size of holding pertaining to a household in the following table 2.5 (a).

The average income from milk production per household, per capita and per adult male unit has been worked out to ₹ 23313, ₹ 3735 and ₹ 4523 respectively.

2.6 Income from capital investment

18.21% of the annual income of the selected cultivator households was accrued from capital investment. The imputed income by way of interest @ 9% per annum from capital investment on items such as milch and draught animals, farm equipments and machinery, farm and residential buildings, cattlesheds, wells, tubewells & pumping sets and durable goods is given in Table 2.6. 3.5 Consumption of food items

The annual and daily consumption of various food articles like cereals, pulses, milk & milk products, edible oils, sugar etc. has also been worked out in Table 3.5 to study the dietary habits of the cultivators. It is observed that wheat is the staple food of selected cultivators because its daily consumption per adult male unit was 346 grams as compared to 33 grams of rice. The daily consumption of gram, milk and milk products, desi ghee, edible oil, sugar and gur & shakkar per adult male unit were 16 grams, 1324 grams, 28 grams, 15 grams, 68 grams and 11 grams respectively. The daily consumption of desi ghee, edible oil, sugar and gur & shakkar per household were 144 grams, 79 grams, 348 grams and 57 grams respectively.

3.6 Cost of production of milk

Since 71.40% of the total expenditure on food items was incurred on milk and milk products only, hence, it has become essential to discuss in detail the cost of production of milk. The cost of milk production per quintal both for buffaloes and cows has been worked out by taking into account the various variable and fixed costs. Variable cost includes expenditure on items such as fodder, concentrates, labour (family and hired) medical care etc. and fixed cost includes interest and depreciation on capital investment made on milch animals and cattlesheds etc.

The cost per quintal and quantity of milk produced is given in the following table:-

Table 3.6 shows that variable cost i.e. fodder and concentrates constitute about 79.85% of the total cost of milk production. Total milk production of buffaloes and cows was

3367.73 quintals. The cost of production of milk per quintal in case of buffaloes and cows was worked out to ₹ 2750.33 as against the income of ₹ 3917.74 thus resulting a net income of ₹ 1167.41 per quintal.

3.7 Disposal of milk

Table 3.7 presents the quantity of milk produced, milk sold and consumed in the liquid form or as milk products. 80.66% of the total buffaloes milk produced was consumed at home and only 19.34% was sold. Further 50.60% of the buffaloes milk was consumed in the liquid form and remaining 49.40% was converted into curd, butter, ghee etc. Out of the total 490.81 quintals of buffaloes milk sold, 95.84% was sold in the form of liquid and the remaining 4.16% as milk products. Similarly, out of the total cows milk consumed at home, 50.60% was used in liquid form and the remaining 49.40% in the form of milk products.
