## **CHAPTER –I**

### **INTRODUCTION**

#### **1.0 General**

The study on “Family Budget of Cultivators” in Haryana has been undertaken by selecting 125 cultivator households (one from each Block) in the State. The period of study is agricultural year 2014-15 i.e. from July 2014 to June 2015. The study aims at analysing sources of income and expenditure of the selected cultivators. An attempt has been made to find out the sources of income, pattern of domestic expenditure, dietary habits, standard of living and proportion of consumption of goods produced at farm and purchased from outside.

#### **1.1 Objectives of the study**

The objectives of the study are as under:-

- i) To find out the extent of contribution by different sources of household income;
- ii) To study the pattern of their domestic expenditure;
- iii) To find out the proportion of consumption of goods produced at farm and of those procured from outside;
- iv) To examine the dietary habits of cultivators and their overall standard of living;
- v) To study the impact of the size of holdings on income and expenditure.

#### **1.2 Methodology**

For the main study i.e. "Economics of Farming in Haryana" 250 holdings were selected (two from the each Block) in the State, keeping in view the size of holdings, willingness and capability of the cultivators in maintaining the day-to-day record of their income and domestic expenditure in the prescribed schedules, 125 out of 250 households, one from each Block was selected for conducting the study on "Family Budget of Cultivators in Haryana". The results extracted in this study are purely indicative in nature because of the small sample size.

The data is collected from selected cultivators under supervision of District Statistical Offices to ensure proper recording and accuracy of data. The selected cultivators were imparted necessary training and ₹ 1000/- per annum was given as honorarium for recording the data on income and expenditure of each household in the prescribed schedules. The supervision was also done by the staff of Headquarter.

## **CHAPTER-II**

### **Income of Cultivators**

#### **2.0 General**

Introduction of improved technology in the field of agriculture has encouraged the cultivators in the State to adopt latest farm practices, thus enabling them to increase their farm yield per hectare as well as income. To increase their earnings, the cultivators have also diversified their economic activities into dairy farming, poultry and other small enterprises. For the present study, the income of the selected cultivators has been classified into following four broad categories:-

- i) Farm cultivation;
- ii) Milk and milk products;
- iii) Interest on capital investment (It includes farm equipments and machinery, farm and residential buildings, milch animals and durable household goods);
- iv) Income from miscellaneous sources such as rent received from leased out land, remittances received from outside, imputed value of fuel, wood & dung cakes, sale of farm yard manure, income from sources other than farm cultivation etc.

#### **2.1 Household size**

The size of the selected cultivator families ranged from 5 to 7 members. However, the average size of family was 6. This simple average does not provide a true picture of household size in terms of consumption as it gives equal weight-age to the children and women. Therefore, the Atwater's scale of Adult Male Unit (Appendix –II) has been applied to work out the true family size of the cultivators. Children and women do not equalize male adult and are, therefore, to be converted to adult male units in order to ascertain their real capacity to earn and spend. This conversion is universally applied in National Sample Survey and other allied surveys conducted throughout the country. According to the "Atwater's Scale of Adult Male Unit of the Chinese Farm Economy by Buck", the average size of family worked out to 5. The selected households members and adult male units have also been classified according to size of holdings in Table 2.1

The table 2.1 shows that average number of members per household in 125 selected families was 6. The maximum average household size of 7 members was observed in the households belonging to the holding size group of 10.0 and above hectares whereas

it was minimum of 5 members in the households pertaining to holding size group of below 2.0 hectares during the year 2014-15.

**Table 2.1 Number of households and household members according to size of holdings**

## 2.2 Income of selected cultivators

The source-wise annual average income per household, per capita and per adult male unit of the selected cultivators during the agricultural year 2014-15 is presented in Table 2.2.

**Table 2.2 Income of selected cultivators**

Sr. No.	Source of income	Total income (All households)	Average income per		
			Household	Capita	Adult male unit
1	2	3	4	5	6
1.	Farm cultivation	28272255 (50.98)	226178	37898	46249

Total		55460628 (100.00)	443685	74344	90726

Note: Figure in brackets indicate the percentages to the total.

It is observed from the above table that the main source of income of farming families was farm cultivation which accounted for 50.98% of their total income.

The contribution of the other three sources i.e. (i) milk and milk products (ii) capital investment and (iii) Miscellaneous, were 6.14%, 18.43% and 24.45% respectively. The average annual income per family, per capita and per adult male unit have been worked out to ₹ 415124, ₹ 69558 and ₹ 84885 respectively.

### 2.3 Income of cultivators according to size of holdings

It is observed that the size of holdings has a significant effect on the income of the cultivators. Generally, the average income of cultivators increases with the increase in the size of holdings because farmers with large holdings follow better agricultural practices and can afford a better package of inputs. The detail of income of cultivators according to size of holdings during the year 2014-15 is given in Table 2.3.

**Table 2.3 Income of cultivators according to size of holdings**

It was also observed that per household annual income in the holding size of 10.0 & above hectares was ₹ 1066596 which was 3.28 times higher than the income of ₹ 324558 in the holdings size of below 2.0 hectares. The overall average annual income per household, per capita and per adult male unit from all sources were ₹ 443685, ₹ 74344 and ₹ 90726 respectively.

## 2.4 Net income from farm cultivation

The net income from farm cultivation has been worked out after taking into account the gross income and expenditure on various items of input like hired manual labour, bullock labour, seeds, fertilizers, implements & machinery, tubewells & pumping sets etc. Table 2.4 gives in brief the gross income, total expenditure and net income of selected cultivators during the year 2014-15.

3.	Net Income	28272255	226178	37898	46249

It has been observed that the average farm income per household, per capita and per adult male unit were worked out to ₹ 226178, ₹ 37898 and ₹ 46249 per annum respectively.

### 2.4 (a) Net income from farm cultivation according to size of holdings

In order to assess the impact of size of holdings on the annual farm income of a household, the size-wise average net income per household, per capita and per adult male unit have been worked out. The detail in this regard is presented in Table 2.4 (a) below:-

**Table 2.4 (a) Net income from farm cultivation (Size-wise)**

Sr. No.	Size of holdings (Hectares)	Total farm income	Average income per

	Total	28272255	226178	37898	46249

The above table depicts that the minimum average net income per household from farm cultivation of the households belonging to the holding size group of below 2.0 hectares was ₹ 127689 whereas the maximum average income was recorded as ₹ 754051 in the size group of 10.0 and above hectares. The average income per capita was as ₹ 23320 which is lowest in the size group of below 2.0 hectares and it was highest ₹ 105832 in the size group of 10.0 and above hectares.

## 2.5 Income from milch animals and milk products

The net income of all the selected households from milk and milk products and milch animals was worked out to ₹ 3405419. The following table 2.5 indicates the total number of milch animals owned, milk produced and the income accrued therein of selected cultivators during the year 2014-15 :-

**Table 2.5 Average number of milch animals owned, milk produced and income accrued**

Sr.No.	Item	Cows	Buffaloes	Cows and Buffaloes	Without Milch Animals	Total

8.	Net income per Household (₹)	25086	26449	50172	-	27243

The above table shows that the cultivators normally prefer to keep buffaloes for milk production because they yield more milk as compared to cows. The cows were mainly kept for the purpose of supplying male calves to be ultimately used as bullocks in the fields. The annual milk production of all 181 milch animals possessed by 125 households was 3542.79 quintals worth ₹ 13308511 and the milk produced per annum per family was 28.34 quintals.

The net income per household per annum from milch animals after meeting out all the maintenance expenditure was ₹ 27243.

### 2.5 (a) Net income from milk production

The total income from milk production of all the selected households has further been classified according to size of holdings to find out the correlation between the income from milk production and the size of holding pertaining to a household in the following table 2.5 (a).

The average income from milk production per household, per capita and per adult male unit has been worked out to ₹ 27243, ₹ 4565 and ₹ 5571 respectively.

### 2.6 Income from capital investment

18.43% of the annual income of the selected cultivator households was accrued from capital investment. The imputed income by way of interest @ 9% per annum from capital investment on items such as milch and draught animals, farm equipments and machinery, farm and residential buildings, cattlesheds, wells, tubewells & pumping sets and durable goods is given in Table 2.6. ### 3.6 Cost of production of milk

Since 62.38% of the total expenditure on food items was incurred on milk and milk products only, hence, it has become essential to discuss in detail the cost of production of milk. The cost of milk production per quintal both for buffaloes and cows has been worked out by taking into account the various variable and fixed costs. Variable cost includes expenditure on items such as fodder, concentrates, labour (family and hired) medical care etc. and fixed cost includes interest and depreciation on capital investment made on milch animals and cattlesheds etc.

The cost per quintal and quantity of milk produced is given in the following table:-

**Table 3.6 Input/output of milk production**

2. Figure in brackets indicate percentages to total.

Table 3.6 shows that variable cost i.e. fodder and concentrates constitute about 77.45% of the total cost of milk production. Total milk production of buffaloes and cows was

3542.79 quintals. The cost of production of milk per quintal in case of buffaloes and cows was worked out to ₹ 2795.28 as against the income of ₹ 4063.45 thus resulting a net income of ₹ 1268.17 per quintal.

### 3.7 Disposal of milk

Table 3.7 presents the quantity of milk produced, milk sold and consumed in the liquid form or as milk products. 66.84% of the total buffaloes milk produced was consumed at home and only 33.16% was sold. Further 49.11% of the buffalo's milk was consumed in the liquid form and remaining 50.89% was converted into curd, butter, ghee etc. Out of the total 876.92 quintals of buffaloes milk sold, 97.63% was sold in the form of liquid and the remaining 2.37% as milk products. Similarly, out of the total cow's milk consumed at home, 49.11% was used in liquid form and the remaining 50.89% in the form of milk products.

8.	Kerosene stove	6	5.04
9.	Pressure cooker	66	55.46
10.	Sewing machine	42	35.29

The above table reveals that 72.27% of the total households were found in possession of motor cycle/ scooter in the year 2014-15. 71.43% of the total households were having refrigerators.
