FOREWARD

The estimates of State Domestic Product (SDP) are important and reliable economic indicators to measure the overall growth of the State economy. These estimates provide a solid base for formulation of developmental programmes and to pursue a sound economic policy.

The Department of Economic and Statistical Analysis prepares the estimates of SDP of Haryana State as per the guidelines issued by the Central Statistics Office, Govt. of India, New Delhi. This publication depicts the picture of State economy by elaborating the revised estimates of SDP for the years 2004-05 to 2008-09, provisional estimates for the year 2009-10 and quick estimates for the year 2010-11, in the SDP series with base year 2004-05.

I hope that this publication would prove very useful to all the Govt. departments, planners, industrialists, researchers and other interested groups in the field of economic development. This report is also placed on the departmental website (www.esaharyana.gov.in).

I appreciate the efforts made by Director, Department of Economic and Statistical Analysis, Haryana and the team of officers & staff associated for bringing out this report in time.

Haryana.

PREFACE

The estimates of State Domestic Product (SDP) also known as State Income estimates are important and reliable indicator for the measurement of overall growth of the State economy as well as the level of development in various socio-economic sectors. These estimates provide a solid base for formulation of development programmes and to pursue a sound economic policy.

At the National level, the estimates of National Product or National Income are regularly prepared and published by the Central Statistics Office (CSO), New Delhi. Similarly, at the State level, State Income estimates are regularly prepared and released by the Department of Economic & Statistical Analysis, Haryana.

The first series estimates of State Income of Haryana for 1960-61 and 1965-66 to 1968-69 with 1960-61 as base year were issued by this department in 1971. Since then, estimates are being prepared and issued annually. To incorporate substantial changes in the socio-economic structure of the economy, availability of additional data and improvement in methodology over the years, the series of State Income estimates have been revised by adopting 1970-71, 1980-81, 1993-94, 1999-2000 and 2004-05 as base years. The brochures containing SDP estimates of Haryana, methodology adopted and source material with 1970-71 and 1980-81 as base years were published in 1983 and 1992, respectively. The first brochure containing SDP estimates of Haryana, methodology adopted and source material with 1993-94 as base year was published in 2002. The second brochure on the same series with base year 1993-94 containing SDP estimates of Haryana for the years 1993-94 to 2001-02 and the third brochure containing the estimates for the years 1993-94 to 2002-03 were published in 2003 and 2004, respectively. The fourth brochure containing the SDP estimates of Haryana for the years 1993-94 to 2004-05 with same base year 1993-94 was published in 2006.

The first brochure on the next series with base year 1999-2000 presenting the SDP estimates of Haryana for the years 1999-2000 to 2005-06 was published in 2007. The second brochure on the same series with base year 1999-2000 presenting the SDP estimates for the years 1999-2000 to 2006-07 and the third brochure presenting the estimates for the years 1999-2000 to 2007-08 were published in 2008 and 2009, respectively.

The CSO, New Delhi has introduced the new series of national accounts with base year 2004-05 in place of the previous series with base year 1999-00 on 29.01.2010 in order to incorporate the latest available data from long term surveys and census, new economic activities, expansion of coverage of activities, improvements in procedures and to the extent possible, the latest international recommendations in compilation of national accounts. On the pattern of CSO, this department also shifted the base year from 1999-2000 to 2004-05 by releasing the first set of SDP estimates on new series during the month of February, 2011. The present brochure is the second on new series with base year 2004-05 presenting the estimates of Haryana for the years 2004-05 to 2010-11.

This brochure has been prepared by Dr. Virender Singh and Ms. Gurprit Kaur Research Officers with the help of Sh. Om Parkash and Ms. Neeru Sharma, Assistant Research Officers and Ms. Neelam Kumari, Field Assistant under the supervision of Sh. Rajender Kumar, Deputy Director.

I take this opportunity to thank Head of Departments/Organisations and District Statistical Officers for furnishing the basic data required for these estimates. My thanks are also due to the officers of the CSO for providing the valuable guidance.

Director, Department of Economic & Statistical
Analysis Haryana

EXECUTIVE SUMMARY

The estimates of State Domestic Product (SDP) are considered as the most important economic indicators to measure the economic development of a State. The SDP is defined as a measure in monetary terms of the volume of all goods and services produced within the geographical boundaries of the State, accounted without duplication during a given period of time. The SDP estimates of Haryana State are regularly prepared and released by the Department of Economic & Statistical Analysis, Haryana. The first publication for the series of estimates of State Income of Haryana for 1960-61 and 1965-66 to 1968-69 with 1960-61 as base was issued by the department in 1971. Since then, these series have been revised five times by adopting 1970-71, 1980-81, 1993-94, 1999-2000 and 2004-05 as base year. This publication presenting the estimates of Haryana State for the years 2004-05 to 2010-11 is the second publication for new series with base year 2004-05.

The estimates of SDP at current prices are obtained by evaluating the goods and services at prices prevailing during the accounting period whereas the estimates at constant prices are worked out by evaluating the goods and services at prices prevailing during the certain fixed period known as base year. The economy has been divided into thirteen sectors for the purpose of calculation of SDP estimates. These thirteen sectors have further been grouped into three broad sectors such as primary, secondary and tertiary sectors. The primary sector comprises Agriculture & Allied Activities, Forestry & Logging, Fishing and Mining & Quarrying sectors. The secondary sector consists of Manufacturing, Construction and Electricity, Gas & Water Supply sectors whereas tertiary sector includes Trade, Hotels & Restaurants, Transport, Storage and Communication, Banking and Insurance, Real Estate, Ownership of Dwellings, Legal & Business Services, Public Administration and Other Services sectors.

The SDP estimates are measured by adopting one of the three alternative approaches viz. production, income and expenditure approaches depending upon the availability of data. The production approach is followed in case of Agriculture & allied activities, Forestry & Logging, Fishing, Mining & Quarrying and Registered Manufacturing sectors. The expenditure approach is adopted in case of Construction

sector only. In the remaining sectors, income approach is followed. The SDP estimates for the year 2008-09 and 2009-10 are provisional, whereas the estimates for the year 2010-11 are quick estimates. The estimates have been prepared broadly as per the methodology suggested by the Central Statistics Office, New Delhi.

The review of the SDP estimates reveals that at current prices, the GSDP of the State has increased from ₹ 95795.12 crore in 2004-05 to ₹ 263974.96 crore in 2010-11 registering a growth of 175.6 percent. At constant (2004-05) prices, the GSDP has increased from ₹ 95795.12 crore in 2004-05 to ₹ 166376.58 crore in 2010-11 recording the growth of 73.7 percent. The average annual growth rate of GSDP during the period 2005-06 to 2010-11 has been estimated at 18.5 percent and 9.7 percent at current and constant (2004-05) prices, respectively. During the period 2005-06 to 2010-11, the annual growth rate in real terms varied from the minimum of 8.2 percent in 2008-09 to 12.0 percent in 2009-10. The sector-wise analysis shows that the primary sector of the State economy has recorded the average annual growth of 3.9 percent whereas secondary and tertiary sectors have recorded the average annual growth of 7.8 and 13.4 percent respectively in real terms during the period 2005-06 to 2010-11. This indicates that the secondary and tertiary sectors have grown at a faster rate than primary sector.

The per capita income of the State at current prices increased from ₹ 37972 in 2004-05 to ₹ 94464 in 2010-11 indicating the growth of 148.8 percent whereas at constant prices it increased from ₹ 37972 in 2004-05 to ₹ 59169 in 2010-11 recording the growth of 55.8 percent. The annual growth of per capita income of the State both at current and constant (2004-05) prices during the period 2005-06 to 2010-11 was highest during the year 2009-10. It is also noted that the per capita income amongst Indian Union at current and constant prices increased by 120.9 percent and 49.1 percent as compared to the increase of 148.8 percent and 55.8 percent respectively recorded by the State during the period 2005-06 to 2010-11. It shows that the pace of economic development of the State remained much faster than that of India during this period.

The sectoral composition of State economy reveals that the share of primary sector comprising Agriculture & Allied Activities, Forestry & Logging, Fishing and Mining & Quarrying sectors in the GSDP in real terms has decreased from 23.3 percent in 2004-05 to 16.7 percent in 2010-11. The share of secondary sector consisting of

Manufacturing, Construction and Electricity, Gas & Water Supply sectors decreased from 32.7 percent in 2004-05 to 29.5 percent in 2010-11. The share of tertiary sector comprising Transport, Storage & Communication, Trade, Hotels & Restaurants, Banking and Insurance, Real Estate, Ownership of Dwellings, Legal & Business services, Public Administration and Other Services Sectors has increased from 44.0 percent in 2004-05 to 53.7 percent in 2010-11. Thus it is clear that the State economy is shifting from Agriculture to Services sector.

INTRODUCTION

The Estimates of State Domestic Product (SDP) are regarded as the most important single economic indicator to measure the economic development of a State. The Per Capita Income is used to determine both the absolute and relative performance of the economy of the State. It is regarded as an important tool to measure regional disparities. The Per Capita Income is now frequently used in India by policy makers like the Planning Commission and the Finance Commission for allocation of a part of plan resources and distribution of proceeds of union excise duties and additional excise duties among different States.

State Domestic Product (SDP)

The SDP is defined as a measure in monetary terms of the volume of all goods and services produced within the boundaries of the State during a given period of time, accounted without duplication. This covers all the goods and services produced within the State. Thus, the goods cover all possible items produced, for example, agricultural crops, livestock and livestock products, fish, forest products, mineral products, manufacturing of various consumer items for consumption, machinery, transport equipments & defence equipments and construction of buildings, roads, dams, bridges etc. Similarly, the services cover a wide spectrum including transport services, medical, educational & sanitary services, trading services, real estate services, Government services, etc. All goods and services produced during the period are to be included whether they are marketed i.e. exchanged for money or bartered or produced for own use. Another important feature of the measure is that it is an unduplicated value of output. In other words, only the value added at each stage of processing is taken into account while measuring the total value of output.

The SDP as such is Gross State Domestic Product (GSDP). The fixed capital assets i.e., plants, machinery and equipments are employed to produce goods. A part of these fixed capital assets is consumed in the process of production, which is known as Consumption of Fixed Capital (CFC) or Depreciation. Thus, CFC is defined as that part of gross product, which is required to replace the fixed capital used in the process of production during the period of account. This flow is based on the concept of the expected economic life of individual assets and is designed to cover the expected loss in value terms due to obsolescence and the normal amount of accidental damage, which can not be made good by repair as well as normal wear and tear. It is estimated on the basis of value and age of different fixed capital assets. The estimates of CFC for all sectors of the

economy are supplied by the CSO after preparing and allocating the same to the States. This CFC is deducted from GSDP to obtain Net State Domestic Product (NSDP).

State Domestic Product at Current and Constant Prices

The estimates of SDP at current prices are obtained by evaluating the product at prices prevailing during the accounting year. The estimates of SDP at current prices do not reveal the actual economic growth as they contain the combined effect of (i) changes in the volume of goods and services and (ii) changes in the prices. The effect of changes in the prices is eliminated by evaluating the goods and services at the prices prevailing during the certain fixed period known as base year. The estimates, thus, obtained are known as SDP at constant prices.

How State Domestic Product (SDP) is calculated?

The economy has been divided into thirteen sectors for the purpose of calculation of SDP. These thirteen sectors have further been grouped in three broad sectors as under:

- | | |
|---------------|--|
| I. Primary | 1. Agriculture and Allied Activities
2. Forestry and Logging
3. Fishing
4. Mining and Quarrying |
| II. Secondary | 5. Manufacturing
5.1 Registered
5.2 Un-registered
6. Construction
7. Electricity, Gas and Water Supply |
| III. Tertiary | 8. Trade, Hotels and Restaurants
9. Transport, Storage and Communication
10. Banking and Insurance
11. Real Estate, Ownership of Dwellings,
Legal and Business Services
12. Public Administration
13. Other Services |

The estimates of SDP can be conceptually prepared by adopting two approaches viz. income originating and income accruing. In the first approach, the measurement corresponds to income originating to the factors of production physically located within the geographical boundaries of a State and represents net value of goods and services produced within the State. The second approach relates to the income accruing to the normal residents of a State. Since, the measurement in the second approach corresponds to the income that becomes available to the residents of a State, it provides a better measure of the welfare of the residents of the State. But due to non-availability of data on inter-state income flows, the

compilation of estimates based on income accruing concept is not possible at present. The estimates that are presently being compiled by the State Statistical Bureaus (SSBs) refer to the income at factor cost, originating within the geographical boundaries of the respective States irrespective of the fact whether factors of production are owned by persons living inside or outside the State.

Theoretically, SDP can be measured by any one of the three alternative approaches viz. production, income and expenditure approach depending upon the availability of data:

- (i) **Production approach** is followed in case of Agriculture including Animal Husbandry, Forestry & Logging, Fishing, Mining & Quarrying and Registered Manufacturing sectors.
- (ii) **Income approach** is followed in respect of Un-registered Manufacturing, Transport, Storage & Communication, Real Estate, Ownership of Dwellings, Legal & Business Services, Trade, Hotels & Restaurants, Public Administration & Defence, Electricity, Water Supply and Other Services sectors.
- (iii) **Expenditure approach** is followed in respect of Construction sector only.

The different States prepare estimates of SDP by industry of origin by following the same classification of the sectors for which estimates are prepared at the National level. However, there are certain activities, which are managed by the Central Government and are not confined to the boundaries of a State. It is not possible to prepare independent estimates at State level in respect of some sectors namely Railways, Communication, Banking & Insurance and Central Government Administration where the activities are spread over to a number of States. These sectors are known as supra-regional sectors and State level estimates for these sectors are prepared by allocating the National estimates on the basis of data on gross earning, gross expenditure, wages & salaries, employment and other relevant indicators. The estimates for these sectors are prepared by the CSO and supplied to the SSBs so that the SSBs may suitably incorporate the same in their state income estimates.

Financial Intermediation Services Indirectly Measured (FISIM)

The banking enterprises render services to their customers in the form of maintaining their accounts and advising them on financial matters. In return for these services, customers are charged a nominal amount, which is substantially smaller than the expenses of the enterprises. On the other hand, the banks provide loans and advances and the returns on such transactions are much higher than the payments made to depositors. The net return accruing to banks is large enough to meet their expenses and to earn a profit. If the financial enterprises are treated like any other productive enterprise, their income in the production account would

only be limited to the charges made on customers which would mean that the banks would have a negative operating surplus and most likely negative value added. To circumvent this difficulty, an imputed income equivalent to interest and dividend receipt of banking and financial enterprises net of interest paid to depositors is defined as Financial Intermediation Services Indirectly Measured – FISIM (income earned in return for services rendered) and is entered as a receipt item in the output of the financial enterprises. The output of the financial enterprises, thus, includes interest received, which was paid by the producing industries. As the interest paid by the Industries is already accounted for in the GDP of the respective industries, its inclusion in the GDP of Banking industry amounts to duplication. To avoid this duplication, FISIM is allocated to the user industries as intermediate input and thereby the GDP of the industries is reduced.

FISIM has been allocated to user industries in line with the recommendations of the 1993 System of National Accounts (1993 SNA). The industries to which FISIM has been allocated are agriculture, livestock, mining & quarrying, manufacturing (registered and unregistered), electricity, gas, transport, construction, storage, trade, hotels & restaurants, business services and other services. As the Banking and Insurance sector is a supra-regional sector, the National estimates of FISIM are estimated by the NAD of the CSO and are allocated to States. The National estimates of FISIM are allocated to different States in the State-wise ratios of the GDP from Banking and Insurance sector. The estimates of the State FISIM supplied by the CSO are distributed to different user industries within the State in proportion to the respective sectoral GSDP.

Overview of State Economy

The detailed methodology adopted and source material used for preparing the SDP estimates in the new series with base year 2004-2005 have been elaborated for all the sectors in subsequent chapters separately. The SDP estimates for the years 2008-2009 and 2009-10 in this brochure are provisional whereas the estimates for the year 2010-2011 are quick. The economic growth of Haryana has been analyzed on the basis of SDP in the subsequent paragraphs.

The State level estimates of GSDP and NSDP of Haryana at both current and constant prices during the period 2004-2005 to 2010-2011 are as under:

State Domestic Product of Haryana (At Current Prices)

Year	GSDP (₹Crore)	Growth Rate (%)	NSDP (₹Crore)	Growth Rate (%)
2004-05	95795.12	-	86222.28	-
2005-06	108884.57	13.7	97903.17	13.5
2006-07	128732.34	18.2	116103.55	18.6
2007-08	151593.37	17.8	136581.39	17.6
2008-09	182481.02	20.4	164595.17	20.5
2009-10	223566.83	22.5	203821.50	23.8
2010-11	263974.96	18.1	238710.75	17.1

At current prices, the GSDP has increased from ₹ 95795.12 crore in 2004-2005 to ₹263974.96 crore in 2010-11 registering a growth of 175.6 percent. The average annual growth rate during the period 2005-06 to 2010-11 has been estimated at 18.5 percent. During this period, the annual growth rate varied from the minimum of 13.7 percent in 2005-06 to the maximum of 22.5 percent in 2009-10. The NSDP at current prices also increased from ₹ 86222.28 crore in 2004-2005 to ₹ 238710.75 crore in 2010-11 registering a growth of 176.9 percent. The average annual growth rate of NSDP during the period 2005-06 to 2010-11 has been estimated at 18.5 percent.

State Domestic Product of Haryana
(At Constant Prices)

Year	GSDP (₹Crore)	Growth Rate (%)	NSDP (₹Crore)	Growth Rate (%)
2004-05	95795.12	-	86222.28	-
2005-06	104607.79	9.2	94011.46	9.0
2006-07	116344.34	11.2	104700.49	11.4
2007-08	126184.55	8.5	112909.71	7.8
2008-09	136529.75	8.2	121640.19	7.7
2009-10	152934.09	12.0	137239.61	12.8
2010-11	166376.58	8.8	149520.29	8.9

At constant (2004-2005) prices, the GSDP increased from ₹ 95795.12 crore in 2004-2005 to ₹ 166376.58 crore in 2010-11 registering a growth of 73.7 percent. The average annual growth rate during 2005-06 to 2010-11 has been estimated at 9.7 percent. The low growth rate of 8.2 percent recorded during the year 2008-09 may be attributed to the comparatively low growth rate of secondary sector of the economy. The low growth rate of 8.5 percent recorded during the year 2007-08 may be attributed to the zero growth rate recorded in primary sector and low growth rate recorded in secondary sector. The NSDP at constant prices increased from ₹86222.28 crore in 2004-2005 to ₹ 149520.29 crore in 2010-11 registering a growth of 73.4 percent. The average annual growth rate of NSDP during the period 2005-06 to 2010-11 has been estimated at 9.6 percent.

The per capita income is one of the important indicators to measure the living standard of the people. The estimated per capita income of the State at both current and constant prices and the percentage changes over the previous year are shown in the following table: -

Per Capita Income of Haryana at Current and Constant (2004-2005) prices

Year	At Current Prices		At Constant Prices	
	Per Capita Income (₹)	Growth Rate (%)	Per Capita Income (₹)	Growth Rate (%)
2004-05	37972	-	37972	-
2005-06	42309	11.4	40627	7.0
2006-07	49261	16.4	44423	9.3
2007-08	56916	15.5	47052	5.9
2008-09	67388	18.4	49802	5.8
2009-10	82024	21.7	55229	10.9
2010-11	94464	15.2	59169	7.1

It is evident from the above table that the per capita income of Haryana at current prices as well as constant prices has shown the increasing trend over the preceding years. The effect of prices on per capita income can well be gauged from the fact that the per capita income at current prices increased from ₹37972 in 2004-2005 to ₹ 94464 in 2010-11 showing a growth of 148.8 percent whereas the per capita income at constant prices increased from ₹ 37972 in 2004-05 to ₹59169 in 2010-11 with the growth of 55.8 percent only. The per capita income of the State witnessed the highest annual growth rate of 21.7 percent and 10.9 percent at current and constant prices, respectively during the year 2009-10.

Per Capita Income of Haryana vis-à-vis All India

Prices Year	At Current Prices		At Constant (2004-2005)	
	Haryana	All India	Haryana	All India
2004-05	37972	24143	37972	24143
2005-06	42309	27131	40627	26015
2006-07	49261	31206	44423	28067
2007-08	56916	35825	47052	30332
2008-09	67388	40775	49802	31754
2009-10	82024	46117	55229	33843
2010-11	94464	53331	59169	35993

The above table shows that the per capita income of Haryana at both current and constant price remained higher than that of India throughout the period 2004-2005 to 2010-11. During this period, the per capita income of Haryana at current prices increased by 148.8

percent whereas that of India increased by 120.9 percent. The per capita income of Haryana at constant prices also increased by 55.8 percent whereas that of India increased by 49.1 percent. It shows that the pace of economic development of Haryana has been much faster than that of India during this period.

**Annual Growth Rates of Gross State Domestic Product by Broad Sectors
at Constant (2004-2005) Prices**

Year	Primary	Secondary	Tertiary	(Percent)
				Total
2005-06	-1.1	8.0	15.5	9.2
2006-07	13.8	9.4	11.3	11.2
2007-08	0.0	6.7	13.6	8.5
2008-09	7.1	3.6	11.6	8.2
2009-10	-2.0	12.9	17.0	12.0
2010-11	5.6	6.4	11.2	8.8

The above table reveals that the economy of Haryana has registered the overall positive growth rate throughout the period 2005-06 to 2010-11. The highest growth rate of 12.0 percent was recorded during the year 2009-10 whereas during the year 2008-09, it registered the lowest growth rate of 8.2 percent. The sector-wise growth rates of State economy reveal that during the period 2005-06 to 2010-11, the primary sector has recorded the average annual growth rate of 3.9 percent whereas secondary and tertiary sectors has recorded the average annual growth rate of 7.8 and 13.4 percent, respectively. This indicates that secondary and tertiary sectors are growing at a faster rate than primary sector.

The composition of Gross State Domestic Product by three broad sectors of the economy viz. primary, secondary and tertiary at constant prices is given in the following table:-

**Composition of Gross State Domestic Product by Broad Sectors of Economy
at Constant (2004-2005) prices**

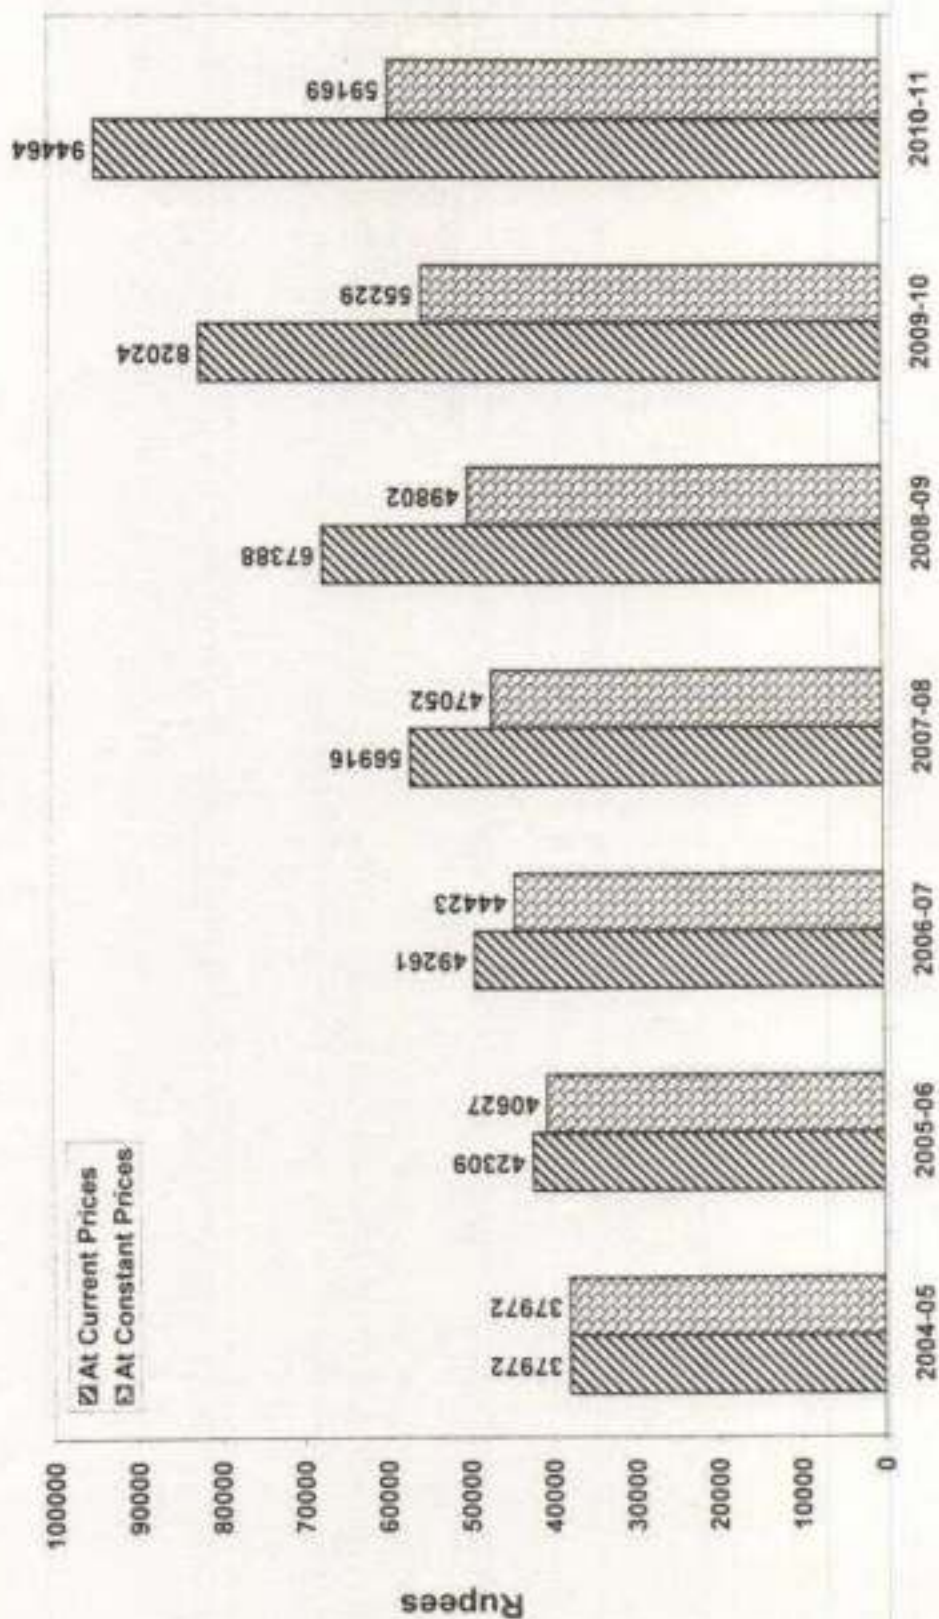

Year	Primary	Secondary	(Percent)
			Tertiary
2004-05	23.3	32.7	44.0
2005-06	21.1	32.3	46.5
2006-07	21.6	31.8	46.6
2007-08	19.9	31.3	48.8
2008-09	19.7	30.0	50.3
2009-10	17.3	30.2	52.6
2010-11	16.7	29.5	53.7

The sectoral composition of the State economy reveals that although there has been gradual decline in the share of primary sector and increase in the share of tertiary sector over the preceding years, but the agriculture sector still continues to dominate the State economy. The sectoral composition clearly indicates that the State economy is shifting from agriculture to services sector, which is a sign of healthy economy.

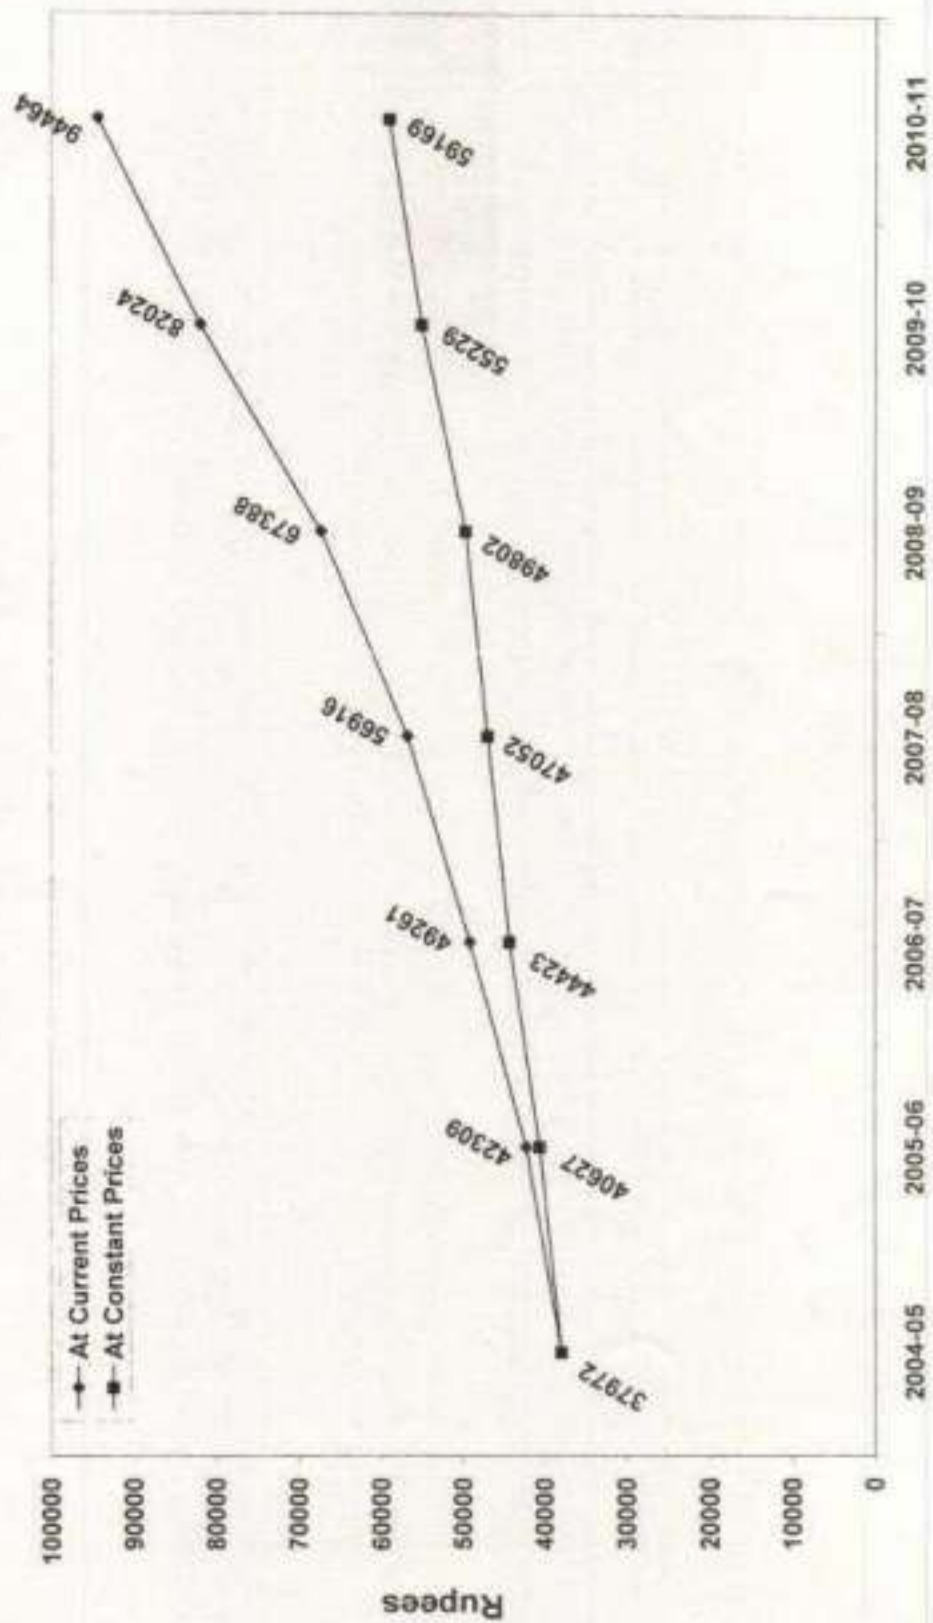

- (i) The share of primary sector comprising Agriculture & Animal Husbandry, Forestry, Fishing and Mining & Quarrying sectors in the State GSDP has declined from 23.3 percent in 2004-2005 to 16.7 percent in 2010-11.
- (ii) The share of secondary sector consisting of Manufacturing, Construction, Electricity, Gas and Water Supply sectors showed the decreasing trend during this period. It decreased from 32.7 percent in 2004-2005 to 29.5 percent in 2010-11.
- (iii) The contribution of tertiary sector comprising Transport, Storage & Communication, Trade, Hotels & Restaurants, Banking & Insurance, Real Estate, Ownership of Dwellings, Legal & Business Services, Public Administration and Other Services sectors has increased from 44.0 percent in 2004-2005 to 53.7 percent in 2010-11.

The change in the sectoral composition of GSDP over the years points to general scenario of the developing economy. The impact of urbanization, industrial progress and development of social services is quite discernible.

CHAPTER-I

AGRICULTURE AND ALLIED ACTIVITIES

COVERAGE

1.1 This sector comprises agriculture proper, livestock & livestock products and operation of Government irrigation system. The economic activities included in agriculture proper are:

- (i) Growing of field crops, nuts, seeds, fruits, vegetables and medicinal plants
- (ii) Management of tea, coffee and rubber plantations
- (iii) Floriculture
- (iv) Agricultural and horticultural services on a fee or on contract basis such as harvesting, baling & thrashing, preparation of tobacco for marketing, pest control, spraying, pruning, picking and packing.
- (v) Foreyard and backyard cultivations
- (vi) Ancillary activities of cultivators such as gur making, transportation of own produce to primary markets, activities yielding rental income from farm buildings & farm machinery and interest on agricultural loans.

Livestock and livestock products include breeding & rearing of animals and poultry besides private veterinary services, production of milk, slaughtering, preparation and dressing of meat, production of raw hides & skins, eggs, dung, raw wool, honey & silk worm cocoons etc. The operation of Government irrigation system comprises supply of water through various Government channels to the agriculturists.

Agricultural and livestock activities go together and it is not always feasible to segregate the various inputs like livestock feed, repairs & maintenance costs, CFC, etc. into those used in agricultural and livestock production.

METHODOLOGY AND SOURCE MATERIAL

1.2 The estimates of GSDP of agriculture and allied activities except operation of Government irrigation system have been prepared by using the production approach. The estimation of GVA involves evaluation of gross value of the products, by-products and ancillary activities at the prices received by the producers and deducting the value of inputs of raw material and services consumed in the process of production from the gross value. In case of irrigation by Government sources, the income approach has been used and the total factor income generated as a result of providing the irrigation

services has been estimated. The estimates of value of output of agriculture proper and livestock production have been prepared separately while the estimates of GVA have been worked out for the sector as a whole.

Agriculture

1.3 The district-wise statistics of area are available in respect of all agricultural crops but output data, however, is not so comprehensive. The output data is available only in respect of the following crops:

- (i) **Cereals:** wheat, barley, rice, maize, bajra, jowar.
- (ii) **Pulses:** gram, moong, mash, massar, arhar, other pulses.
- (iii) **Oilseeds:** sesamum, groundnut, rape & mustard, sunflower.
- (iv) **Fibres:** cotton (American and Desi), sanhemp
- (v) **Fruits & vegetables:** potatoes, onion, tomato, peas, sweet potatoes, cabbage, cauliflower, bhindi, brinjal, other vegetables, mango, grapes, guava, ber, litchi, chiku, citrus fruits and other fruits.
- (vi) **Drugs & Narcotics:** tobacco, medicinal plants
- (vii) **Condiments:** dry chillies, garlic.
- (viii) **Sugarcane:** sugarcane (gur).

The above mentioned crops account for about 89 percent of total cropped area. For remaining crops of other cereals, other oil seeds, other condiments and spices, other fibres, fodder, other miscellaneous food and non-food crops, only area figures are available, but not outturn.

1.4 All the agricultural commodities including various by-products have been grouped into four categories according to reliability of data, viz. (i) principal crops (ii) minor crops (non-forecast) (iii) miscellaneous and unspecified crops which have not been included in any of two categories mentioned above and (iv) other products and by-products.

i) Principal crops:

The principal crops consist of rice, wheat, jowar, bajra, maize, gram, barley, other kharif pulses, other rabi pulses, groundnut, sesamum, rape and mustard, sunflower, cotton, sanhemp, sugarcane, tobacco, potatoes and dry chillies. The exhaustive district-wise statistics of area and output of all above crops are made available by the State Directorate of Land Records (DLR) in their publication, "Seasons and Crops Report" being published annually. The information regarding quantity of wheat and rice procured by the Government agencies is supplied by the Food & Supplies Department. The information regarding utilization rates/ratios of sugarcane for seeding, chewing/juice making and preparation of khandsari has been supplied by the CSO. The information on the quantity of sugarcane crushed by the mills during each year is available from the Cane Commissioner, Haryana.

(ii) Minor crops:

Ragi, small millets, jute, mangoes, citrus fruits, sweet potatoes, grapes, other fruits, Onion, other vegetables, flowers, toddy and medicinal plants have been included under this category. In case of ragi, small millets and jute, only the area figures are available and these are provided by the DLR. The data regarding area and production of onion are supplied by the DLR. The data regarding area and production of mangoes, citrus fruits, sweet potatoes, grapes, other fruits & other vegetables, flowers and medicinal plants are supplied by the Horticulture Department. The value of output of toddy supplied by the CSO is based on NSS report of 61st round on consumption of some important commodities in India and census data on rural and urban population.

(iii) Miscellaneous and unspecified crops

Other cereals, other oil seeds, other fibres, other dyes and tanning material, other drugs & narcotics, other condiments & spices, fodder, miscellaneous food crops, miscellaneous non-food crops and foreyard & backyard cultivation have been covered under the category of miscellaneous and unspecified crops. In case of other cereals, other oil seeds, other fibres, other dyes and tanning material, other drugs & narcotics, other condiments & spices, miscellaneous food crops and miscellaneous non-food crops, only the area figures are available and these are supplied by the DLR. The area under fodder which also covers the area under guar is obtained from the DLR. But the area under guar for which production of guar seed is available, is subtracted from the total area under fodder. From the remaining area, the production of green fodder has been worked out as 50 MT per hectare for irrigated area and 25 MT per hectare for unirrigated area under the crop. The production of guar seed is evaluated separately by using its prices. The area under the crops in foreyard/backyard of houses has been estimated as 0.21 percent of the net area sown in the state.

(iv) Other products and by-products

This category comprises gur (indigenous production only), cane trash, bagasse, stalks & straw and grass. Out of the total outturn of sugarcane, the quantity of sugarcane left over after allowing for the uses of crushed by mills, seeding, chewing/juice making and preparation of khandsari is assumed to be converted into gur. The production of gur is estimated as 10 percent of the sugarcane left over. The estimates of production of sugarcane bagasse have been prepared by taking 3.5 percent of sugarcane used for gur making. The quantity of sugarcane used for seed purpose has been estimated as 3.16 MT per hectare of area under sugarcane. The estimates of sugarcane used for chewing and khandsari have been

worked out as 2.5 percent and 0.12 percent respectively of sugarcane production.

In case of grass, estimates of production for the year 1960-61 prepared and supplied by the CSO have been projected to other years on the basis of change in combined area under (i) permanent pasture and grazing lands, (ii) miscellaneous tree crops and groves, (iii) culturable waste land, (iv) fallow lands and (v) net area sown during the year by adopting the weights 4, 1, 2, 2 and 1 respectively for combining the area of above five categories.

Agricultural Prices

1.5 The district-wise data on weekly wholesale prices alongwith the quantity of market arrival of paddy, wheat, jowar, bajra, barley, maize, gram, moong, arhar, mash, massar, peas, groundnut, sarson, toria, taramira, sunflower, sesamum, guar seed, cotton, gur, dry chillies and garlic are collected by the offices of District Statistical Officers (DSOs) from the crop-wise selected primary markets during peak market arrival periods. The prices for the quantity of paddy and wheat procured by the Government agencies are provided by the State Department of Food & Supplies. The prices at which the sugarcane is purchased by the sugar mills for crushing are available from the Cane Commissioner, Haryana. The district-wise wholesale prices of all fruits and vegetables except mushroom during peak market arrival periods are collected and supplied by the offices of DSOs. The prices of mushroom and flowers are available from the State Department of Horticulture. The data on prices of green fodder is obtained from the Farm Accounts Report of the Planning Department. The base year price of medicinal plants is moved to the current year with the WPI of drugs and narcotics.

Value of Agricultural Output

1.6 The district-wise weighted prices of those crops for which the data on weekly wholesale prices alongwith the arrival in selected primary markets during peak market period is available, has been worked out by adopting the following procedure:-

- (a) The arithmetic average of the wholesale weekly prices prevailing in each selected primary market within a district during peak market period has been calculated to get market/centre-wise prices.
- (b) The weighted average price for a district has been obtained as a weighted average of the centre-wise prices derived at 'a' above, weights being the centre-wise out-turn for sale.

The district prices so arrived at have been used for evaluation of all those crops for which district wise area and out-turn are available. The quantity of paddy and wheat procured by the Government agencies is evaluated at the procurement price whereas

the remaining production is evaluated at the district price derived at above. In case, out-turn of a certain commodity in the district is negligible and separate price for that district is not available, the price of adjoining district has been used.

In case of fruits, vegetables, flowers and medicinal plants, the data on both production and prices are available for evaluation.

The production of green fodder is evaluated at the prices available from the Farm Accounts Reports.

The quantity of sugarcane purchased and value paid by sugar mills is available from Cane Commissioner, Haryana. The sugarcane used for seeding, chewing/juice making and preparation of khandsari has also been evaluated at the average cane price paid by sugar mills.

1.7 In case of those agricultural commodities for which the data either on prices or production or both on prices and production are not available, the deviation in the method of estimation of value of output has been done and the same has been briefed in the following paragraphs:

- (i) **Other Pulses:** On the basis of data given in NSS Report No. 32, the price of other pulses i.e. moth, horsegram and peas has been worked out as 85 percent of the weighted average price per tonne/weighted average value per hectare of arhar, urd, moong, masur and horsegram.
- (ii) **Other Cereals :** The gross value of output of other cereals has been estimated by applying weighted average value per hectare of jowar, bajra, barley, maize and ragi to the area under other cereals.
- (iii) **Other Oilseeds:** The value per hectare of other oil seeds has been assumed as 85 percent of weighted average value per hectare of linseed, sesamum and castor.
- (iv) **Sanhemp:** The price of sanhemp for the year 1993-94 moved to the subsequent years with the wholesale price index of jute, sanhemp and mesta textiles has been used to estimate the value of output.
- (v) **Other Fibres:** The value per hectare of sanhemp less 10 percent has been used to estimate the value of output of other fibres.
- (vi) **Other Condiments and Spices:** The average value per hectare of other condiments and spices has been assumed to be equal to 90 percent of weighted average value per hectare of dry chillies, dry ginger, turmeric and garlic. As there is no production of turmeric and dry ginger in the State, 90 percent of weighted average value per hectare of dry chillies and garlic has been applied for the evaluation of output of other condiments and spices.

- (vii) **Other Fruits and Vegetables:** The weighted average price of all fruits and vegetables for which the separate data is available has been used to evaluate the output of other fruits and vegetables.
- (viii) **Miscellaneous Food and Non-food Crops:** For the evaluation of output of miscellaneous food and non-food crops, the all India estimates of yield per acre (converted to hectare) as estimated by the National Income Committee (NIC) have been projected to other years with the help of movement of composite wholesale price index of 20 important agricultural commodities.
- (ix) **Other Dying and Tanning Material:** The value of other dying and tanning material is estimated by using the value per hectare of miscellaneous non-food crops.
- (x) **Other Drugs and Narcotics:** The value per hectare of other drugs and narcotics for the year 2004-2005 has been moved to the subsequent years with the value per tonne of tobacco.
- (xi) **Foreyard/Backyard Cultivation:-**The output is estimated by using value per hectare of other fruits and vegetables.
- (xii) **Straw and Sticks:** The value per hectare data based on the results of Cost of Cultivation Studies has been used for evaluation of the by-products of paddy, wheat, jowar, bajra, barley, maize, rapeseed and mustard, sunflower, gram, moong, mass, masur, arhar, cotton and sesamum.
- (xiii) **Sugarcane Trash and Bagasse :** The output of Sugarcane Trash and Bagasse is evaluated at the prices based on the results of Cost of Cultivation Studies.
- (xiv) **Grass:** The all India price of grass for 1960-61 and adjusted for the later years on the basis of price movement of wheat straw, has been used for evaluating the estimated output of grass.

Livestock

1.8 For the purpose of estimation of gross value of output, livestock products are divided into 7 sub-groups viz., (i) milk (ii) meat group (iii) dung (iv) wool, hair and bristles (v) eggs (vi) honey and (vii) increment in livestock. The production estimates of main livestock products viz. milk, meat, eggs and wool are based on the results of the Integrated Sample Surveys conducted by the State Animal Husbandry Department on annual basis. In the absence of current direct information on output of various other livestock products, their annual production has been estimated with the help of yield rates obtained from relevant reports and estimated population of different categories of livestock. The main source of information on livestock numbers is quinquennial livestock censuses held in the State. For the inter censal and post-census years, the estimates have been arrived at by using the geometric growth rate observed for each category between the two latest consecutive livestock

censuses.

(i) Milk: The data regarding milk production of buffaloes, cows and goats in the State is obtained from the State Animal Husbandry Department annually. The State Animal Husbandry Department does not estimate the production of camel milk. So, the production of camel milk has been worked out by applying the yield rate of milk per animal obtained from the CSO to the total number of animals.

(ii) Meat Group: The Meat Group comprises meat (animals & poultry meat), meat products (fats, heads, legs etc.) and meat byproducts comprising hides (cattle and buffalo hides), skin (goat and sheep skin), guts, blood, bones, horns, hoofs etc.

The production of goat meat, sheep meat and pig meat is made available by the State Animal Husbandry Department. The production of poultry meat has been calculated from the number of adult fowls and chickens slaughtered by the formula given below:

Poultry meat = 50 per cent of total adult fowls plus chickens and ducklings killed
Chickens and ducklings killed = Estimated number of chicken and ducklings in the beginning of the year
+ Chickens survived during the year + 50 per cent of adult fowls
- Estimated number of total fowls during the following year

The output of meat products i.e. offal's & glands, fats, head and legs have been estimated by using the number of animals slaughtered and fallen and average yield of meat for different categories of animals. The total number of animals slaughtered is provided by the State Animal Husbandry Department on annual basis. The data regarding number of animals fallen is derived from the livestock population by using the mortality rates supplied by the CSO. The average yield rates of meat products for different types of animals have also been revised as supplied by the CSO.

The production of hides and skins is obtained mostly from (i) animals slaughtered for the production of meat and (ii) animals fallen due to natural death. The value of output of hides and skin from animals slaughtered for production of meat and from animals fallen due to natural death, thus, have been added for estimating the total value of output of hides and skins. The value of other meat by products i.e. guts, blood, bones, horns, hoofs, etc. has been estimated as the percentage of value of meat and meat products. The ratios used for estimating the value of meat by products of different animals have been supplied by the CSO.

(iii) Dung : Production of dung has been estimated by using the evacuation rates collected by Indian Agricultural Statistics Research Institute (IASRI) and State Animal Husbandry

Department (1966-67). The production of dung, thus estimated, has been divided into two groups (i) Dung used as manure and (ii) Dung used as fuel. The utilisation rates used are based on results of IASRI (1972) report. The quantity of dry dung-cakes has been taken as 40 percent of green dung.

(iv) Wool, Hair and Bristles : The production of wool clipped in the State is based on Integrated Sample Survey conducted by State Animal Husbandry Department on annual basis. The total production of wool has been obtained by adding the estimated production of plucked wool calculated on the basis of data on yield rates per sheep contained in the Marketing Report (Director of Marketing & Inspection, 1964) to the production of wool clipped. The estimates of production of goat hair and camel hair have been prepared on the basis of yield rates provided by National Research Centre (NRC), Bikaner and that of pig bristles on a study conducted by the CSO in Uttar Pradesh.

(v) Eggs : The production of hen eggs in the State is based on the results of Integrated Sample Survey conducted by the State Animal Husbandry Department. The State Animal Husbandry Department does not estimate the production of duck eggs. So, the production of duck eggs has been worked out by applying yield rate of eggs per duck obtained from the CSO to the total number of ducks.

(vi) Honey: The production and prices of honey in the State are made available by the Khadi and Village Industries Commission (KVIC), Govt. of India.

(vii) Increment in Livestock: The annual net increase in the population has been calculated separately for each category of livestock on the basis of the projected population based on Livestock censuses.

Evaluation of Livestock Output

1.9 The gross value of various products has been obtained by evaluating the output of each commodity at the corresponding average annual wholesale price separately for urban and rural area. The wholesale prices of different categories of livestock and livestock products are collected separately for urban and rural area on bi-annual basis by the District Statistical Agencies. For this purpose, one centre in urban area and two centres in rural area have been selected in each district. Wherever the prices are not available or found unsatisfactory, corresponding prices of adjoining district have been used. The wholesale prices of some of the livestock products are not available from the markets. These commodities have been evaluated at the prices available from relevant reports and duly adjusted for subsequent years with the help of relevant indicators.

Inputs

1.10 To arrive at the estimates of gross product from agriculture and livestock, necessary deductions on account of current cost of inputs have been made from the value of output. These consist of (i) cost of seed, (ii) cost of manure, (iii) current repair and maintenance of fixed assets and other operational costs, (iv) cost of livestock feed, (v) irrigation charges, (vi) market charges, (vii) electricity charges, (viii) cost of pesticides and insecticides and (ix) cost of diesel oil. The detailed methodology and source material for the assessment of input cost have been briefed in the following paragraphs: -

(i) Cost of Seed: The quantity of seed used for wheat, jowar, bajra, barley, maize, gram, arhar, mass, moong, masur, sesamum, groundnut, rapeseed & mustard, sugarcane, potato, cotton seed and dry chillies has been estimated on the basis of crop-wise seed rates available from the results of Cost of Cultivation Studies. The quantity of seed used for the above crops, thus estimated, has been evaluated at the State weighted average price. The cost of seed used for paddy, other cereals, condiments & spices, other miscellaneous food crops, other miscellaneous non-food crops, fodder crops, guar seed and other pulses has been estimated on the basis of crop-wise per hectare cost of seed available from the results of Cost of Cultivation Studies.

(ii) Cost of Manure: The manure consists of chemical fertilizers and organic manure. The material-wise quantity of chemical fertilizers consumed in the State and their rates are available from the State Agriculture Department. In case of organic manure, the estimates of dung used for manuring purpose as evaluated in livestock sub-sector have been used.

(iii) Current Repairs and Maintenance of Fixed Assets and Other Operational Costs: The estimates of expenditure on current repairs and maintenance of fixed assets and other operational costs supplied by the CSO are based on the information available from All India Debt and Investment Survey (AIDIS), 2002-03.

(iv) Cost of Livestock Feed: The method broadly comprises the estimation of total cost of up-keep of entire live-stock population. The items considered under feed-cost are:

- (i) Roughages
- (ii) Concentrates

As regards roughages, the entire value of fodder crops (green and dry) and 95 percent value of stalks and straw have been assumed to contribute towards livestock feed.

The cost of concentrates has been taken as the product of annual consumption cost per animal of different categories of animals and population of these categories. The consumption rate of different categories of animals is available from the results of Cost of Cultivation

Studies. The consumption cost per animal for the bench mark year has been moved with WPI of food grains for subsequent years. The population of different categories of animals for different years is available from the livestock census 2003 and the compound growth rate observed between two latest consecutive live stock censuses.

(v) Irrigation Charges: - The annual data on irrigation charges payable to Government in lieu of water supplied to producers from Government canals and other means of irrigation have been culled out from the State Budget.

(vi) Market Charges:- The market charges for agricultural crops have been taken as 3.22 percent of gross value of output of agriculture proper. This ratio has been supplied by the CSO which is based on the bench mark survey conducted by the Directorate of Economics & Statistics, Ministry of Agriculture, Govt. of India.

(vii) Electricity Charges:- The expenditure on electricity used for agricultural purposes is considered as electricity charges. The estimates of electricity charges are based on the information contained in the Annual Reports of Uttar Haryana Bijli Vitran Nigam (UHBVN) and Dakshin Haryana Bijli Vitran Nigam (DHBVN).

(viii) Cost of Pesticides and Insecticides:- The estimates of consumption of pesticides and insecticides for agriculture in the State prepared by the CSO are based on the information available from Pesticides Association of India for despatches and Directorate of Quarantine and Plant Protection for State-wise consumption.

(ix) Cost of Diesel Oil: - The cost estimates of consumption of diesel oil per tractor and per diesel engine are supplied by the CSO which are based on the results of Cost of Cultivation Studies. The data regarding total number of tractors and diesel sets in the State is made available by the State Agriculture Department on annual basis.

Gross Value Added

1.11 The estimates of gross value added from this sector (Agriculture proper and Livestock) have been arrived at by deducting the estimated total cost of inputs used in production from the total value of output. Since the operation of Government irrigation system is also an activity to be accounted for in the agriculture sector, the gross value added from such services has been added to obtain the corresponding total for the sector. The GVA from the operation of Government irrigation system has been obtained by the income method as the sum of compensation of employees, interest payments, operating surplus and maintenance provisions(CFC). The details regarding compensation of employees, interest payments and operating surplus are available from the State Government Budget. It is observed that the operating surplus, which is taken to be the excess of current receipts over

CHAPTER- II

FORESTRY AND LOGGING

Coverage

2.1 The economic activities considered in this sector include:

- (i) Forestry (e.g. planting & conservation of forests, gathering of forest products, charcoal burning carried out in the forests and the like)
- (ii) Logging (e.g. felling and rough cutting of trees, hewing or rough shaping of poles, blocks, etc. and transportation of forest products to the sale depots/assembly centers)
- (iii) Farmyard wood (industrial wood & fuel wood collected by the primary producers from trees outside regular forests).

The forest products are classified into two broad groups, viz. (a) major products comprising industrial wood (timber, round wood, match and pulp wood) and fuel wood (fire wood and charcoal wood) and (b) minor products, comprising a large number of heterogeneous items such as bamboo, sandal wood, charcoal, lac, fodder, honey, resin, gum, tendu leaves etc.

Methodology and Source Material

Estimates at Current Prices

2.2 The estimates of State Domestic Product from this sector have been prepared by following the production approach. The major source of forest statistics is the Principal Chief Conservator of Forests, Forest Department, Haryana and the CSO.

2.3 The data regarding value of output of industrial wood obtained from forest sources is provided by the State Forest Department. This data provided by the State Forest Department is for the recorded production and the considerable quantity of industrial wood escapes official recording. As suggested by the CSO, an allowance of 10 per cent of the recorded production of industrial wood has been made to cover the unrecorded production and unauthorized removal. The data regarding the value of output of industrial wood obtained from social forests and trees outside forests (TOF) is provided by the CSO.

2.4 The value of output of minor forest products has been estimated as 10 times of the revenue collected from minor forest products. In addition, output of fodder from forest

sources is also included under minor forest products. As suggested by the CSO, 0.02 percent of the value of roughages (sticks/straw of agricultural crops, fodder and grass) is taken as the value of output of fodder from forest sources.

2.5 As the reliable estimates on production of fuel wood are not available, the output of fuel wood has been estimated through the consumption approach. The estimated production of fuel wood is based on three components, namely:

- (i) Household fuel wood consumption
- (ii) Agricultural by-products used as fuel
- (iii) Fuel wood consumed by industries and on funerals

The State-wise data on per head quantity of fuel wood (firewood and chips) consumed for 30 days separately for rural and urban area is available from the NSS, 61st Round (2004-2005), Consumer Expenditure Survey. To arrive at the total quantity of fuel wood consumed during the year 2004-2005, the projected census population for rural and urban areas has been used. Similarly, the data on per head quantity of fuel wood consumed for 30 days separately for rural and urban area is available from the NSS, 55th Round (1999-2000), Consumer Expenditure Survey. The per head quantity of fuel wood consumed for 30 days during the year 2004-2005 has been projected to the subsequent years by using the compound growth rate observed between per head consumption of fuel wood based on 1999-2000 and 2004-2005 survey results. The total quantity of fuel wood consumed during the subsequent years is estimated by using the per head consumption (quantity) and population projected for those years. The total quantity of fuel wood consumed during different years as worked above is evaluated at the prices supplied by the State Forest department.

From the total value of fuel wood consumption, the value of output of agricultural by-products namely arhar sticks, cotton sticks, jute sticks and sugarcane bagasse is subtracted to avoid the duplication as the value of output of these by-products is also accounted for in agriculture sector.

2.6 As suggested by the CSO, the value of fuel wood consumed in industry and on funerals has been estimated as 6 percent of the value of fuel wood consumption of the households adjusted for the agricultural by-products.

2.7 To arrive at the estimates of gross product, deductions have been made for the expenditure incurred on repairs, maintenance and other operational costs. As suggested by the CSO, expenditure on repairs, maintenance and other operational costs has been taken as 15.6 percent of the total value of output.

Estimates at Constant Prices

2.8 In case of industrial wood, fuel wood & fodder for which information on physical output is available, the constant prices estimates of value of output have been obtained by evaluating the output at the base year (2004-2005) prices. In case of minor products worked out from revenue collected from minor forest product, the value of output at current prices has been deflated with the help of specially prepared index of wholesale prices of major products, which is given as under:

Item	Industrial Wood	Fuel Wood
Wholesale price in current year	P11	P12
Wholesale price in 2004-05	P01	P02
Out-turn during current year	Q1	Q2
Index number of implicit prices of major forest products for current year with 2004-05 as base	$\frac{Q1 \cdot P11 + Q2 \cdot P12}{Q1 \cdot P01 + Q2 \cdot P02}$	

The same proportion of expenditure on repairs, maintenance and other operational costs to the total value of output as for estimates of current prices have been used to obtain the corresponding estimates of gross product. The estimates of CFC supplied by the CSO are deducted to arrive at the net product.

The detailed estimates of SDP from Forestry and Logging Sector for the years 2004-2005 to 2009-10 at both current and constant prices have been given in Tables 24 and 25.

CHAPTER -III

FISHING

Coverage

3.1 The activities covered in the fishing sector are :

- (i) Commercial fishing in (a) ocean, coastal and offshore waters & (b) inland waters ; that include catching, tackling and gathering of fish from rivers, irrigation and other canals, lakes, tanks, fields in undated tracts etc.
- (ii) Subsistence fishing in land waters and artificial ponds.
- (iii) Gathering of sea weeds, sea shells, pearls, sponges and other ocean and coastal water products.
- (iv) Fish curing viz., salting and sun drying of fish.
- (v) Production of prawn

Methodology and Source Material

Estimates at Current Prices

3.2 The estimates of SDP have been prepared by following the production approach. The data on production and average wholesale prices of inland fish and prawn obtained from the State Fisheries Department have been used. As the production estimates are inclusive of subsistence fishing, no adjustment has been made on that account.

3.3 To arrive at gross product, deduction on account of repairs, maintenance and other operational costs has been made. In the absence of any data regarding repairs, maintenance and other operational costs, it is assumed as 10 percent of the value of output in case of inland fish and 22.5 percent of value of output of prawn as suggested by the CSO.

Estimates at Constant Prices

3.4 For estimation of the value of output at constant prices, production of fish for each year has been valued at 2004-2005 prices. The same proportion of expenditure on repairs, maintenance and other operational costs as for estimates of current prices has been used to obtain corresponding estimates of gross value added.

3.5 The estimates of CFC supplied by the CSO are deducted to arrive at net product.

The detailed estimates of SDP from Fishing Sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 26 & 27.

CHAPTER- IV

MINING AND QUARRYING

Coverage

4.1 The economic activities covered under this sector comprise extraction of minerals which occur in nature as solids, liquids or gases, under-ground and surface mines, quarries and oil wells, with all supplementary operations for dressing and beneficiating ores and other crude minerals such as crushing, screening, washing, cleaning, grading, milling, floatation, melting, palletizing, topping and other preparations needed to render the material marketable. All these activities are covered to the extent they are carried on at the mine site. The production of 'rock salt' is included but production of salt obtained by way of evaporation of water from sea, lakes, etc. is excluded from the purview of this sector. Similarly, the expenditure incurred on preparing mining sites, prospecting and boring activities is not included under this sector.

Methodology and Source Material

Estimates at Current Prices

4.2 The estimates of state domestic product from this sector have been prepared by the production approach. Accordingly, the gross value of production has been estimated first and then deductions have been made for the inputs used in the production activity.

4.3 The data on quantity and value of major minerals is obtained from the Indian Bureau of Mines (IBM). As regards the value of output of minor minerals, it is obtained from the State Mines & Geology Department.

4.4 The estimates of GSDP at current prices have been obtained by deducting the value of inputs and FISIM from the total value of output. The value of inputs in respect of all major minerals is worked out on the basis of mineral-wise deductible rates as supplied by the IBM for each State separately. For minor minerals, the deductible rates of inputs supplied by the CSO are used to work out the value of inputs.

Estimates of Constant Prices

4.5 The value of output of major minerals at 2004-2005 prices has been derived by evaluating the quantity of each major mineral at the corresponding pithead price of 2004-2005. In case of minor minerals, which are reported in value terms only, the all India ratio of value of output of minor minerals at constant to current prices is used to obtain the value of output at constant (2004-2005) prices. The adjustment for value of inputs and FISIM is done to arrive at GSDP at constant prices.

4.6 The estimates of CFC are deducted from GSDP to arrive at NSDP.

The detailed estimates of SDP from Mining and Quarrying sector for the years 2004-2005 to 2009-10 at both current and constant prices have been given in Tables 28 and 29.

CHAPTER -V

REGISTERED MANUFACTURING

Coverage

5.1 The registered manufacturing sector covers all organised manufacturing and processing establishments which are registered under Section 2m (i) and 2m (ii) of the Indian Factories Act, 1948 which respectively refers to the factories employing 10 or more workers using power and those employing 20 or more workers but not using power on any day of the preceding 12 months and bidi and cigar establishments registered under Bidi and Cigar Workers (condition of employment) Act, 1966 and employing 10 or more workers using power or 20 or more workers not using power. The establishments not engaged in manufacturing activities, such as, those providing water and sanitary services, recreational and cultural services; personal services etc. though registered under Indian Factories Act, have been excluded from the scope of manufacturing sector and covered under services sector. The establishments engaged in generation, transmission and distribution of electricity are also not covered under registered manufacturing. Similarly, operation of cold storages though classified under manufacturing, are not covered here but included under storage. The railway workshops, currency coinage & mints, ordinance factories and other manufacturing establishments of public sector, are covered under this sector. Further, output of liquefied petroleum gas (LPG) has also been included under this sector as the production of LPG is essentially a manufacturing activity. However, distribution of LPG in cylinders, which is a trading activity, is covered under trade sector.

Methodology and Source Material

Estimates at Current Prices

5.2 The estimates of Gross Domestic Product i.e. gross value added from this sector have been worked out using production approach. Accordingly, from the value of output (comprising value of products and by-products manufactured, value of work done for customers, value of adjustments in stock and sale value of goods sold in the same condition as purchased), deductions have been made on account of inputs i.e. cost of (i) basic raw materials used in production, (ii) fuel and electricity consumed and (iii) services purchased from outside.

5.3 The National Sample Survey Organization (NSSO) carries out annually a survey of industries known as Annual Survey of Industries (ASI). This survey provides data regarding

output, input, depreciation, value added, employment, capital expenditure, etc. separately or census and sample sectors. Gross Domestic Product by manufacturing has been estimated by tabulating essential characteristics of ASI returns made available by the concerned NSSO office responsible for collection of data. The estimates of gross product from ASI are duly adjusted for non-response units. However, it was observed that the activity pertaining to repair of locomotives and other railroad equipments (NIC-98, code 352) is not captured under ASI. This activity is entirely undertaken by Railways and the exact information on output, inputs etc. is readily available in budget documents of Railways. Therefore, in the new series, gross product from this activity has been estimated using the information available in the budget documents of Railways and not from ASI.

Estimates at Constant Prices

5.4 The estimates of gross product at constant prices have been obtained by projecting industrial group-wise base year (2004-2005) estimates of gross product with the index of industrial production of the corresponding group being prepared annually at the State level.

5.5 From the gross product so obtained, adjustment for FISIM has been done. To arrive at the net product, estimates of CFC as supplied by the CSO are deducted from the gross product.

The detailed estimates of SDP from Registered Manufacturing Sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 30 and 31.

CHAPTER- VI

UNREGISTERED MANUFACTURING

Coverage

6.1 The registered manufacturing sector and the unregistered manufacturing sector are complementary to each other. These together constitute manufacturing sector. The manufacturing sector covers all manufacturing, processing and repairs & maintenance services units irrespective of their employment size, investment and location. The unregistered manufacturing sector being complementary to registered manufacturing sector, thus, by implication, covers all those units which are not covered under the registered manufacturing sector. In other words, the unregistered manufacturing sector covers all the manufacturing, processing, repairs and maintenance services units employing less than 10 workers and using power or less than 20 workers and not using power. It, by implication, also covers Own Account Enterprises (OAEs) engaged in the manufacturing activity. However, conversion of sugarcane into indigenous gur, slaughtering of animals and dressing of meat carried out by farmers and individuals are excluded from this sector as they are included under agriculture and allied activities.

Methodology and Source Material

Estimates at Current and Constant Prices

6.2 The estimates of gross product from this sector have been prepared by following the income approach. The estimates of GVA for the unregistered manufacturing industry for the base year are obtained as a product of work force and GVA per worker in terms of labour input and labour productivity. The GVA estimates for the new series for the base year 2004-05 have been prepared separately for the two segments of the unregistered manufacturing, namely (i) the segment of micro, small and medium enterprises (MSMEs) (other than those covered under the ASI) and (ii) the rest of unorganized manufacturing, i.e., the manufacturing activity which is not covered under either the ASI or the MSME.

The GVA for the MSME segment in the new series has been estimated using the value of output data available from the results of Fourth All India Census on Micro, Small and Medium enterprises, 2006-07 released by the office of the Development Commissioner, Micro, Small and Medium Enterprises and the GVA/GVO ratios available from the Directory Manufacturing Enterprises (DME) (i.e. those employing 6 and above workers) results of NSS, 62nd round survey on unorganized manufacturing. The due adjustments have been made

to bring the estimates of GVA of the MSME segment to the price levels of 2004-05.

The estimates of other unregistered manufacturing units, i.e., the units not belonging to MSMEs group have been compiled using information on GVA per worker and workforce. The GVA per worker was available from the integrated surveys of enterprises and households excluding MSME cases in the 62nd round of NSS (2005-06) and the same was suitably deflated to the year 2004-05.

The estimates of workforce for this portion of unregistered manufacturing that is for the units neither belonging to ASI nor to MSMEs have been obtained by subtracting the labour input registered manufacturing and MSMEs (Non-ASI) from the total labour input in the manufacturing activity available from the results of NSS, 61st round (2004-05) of Employment Unemployment Survey (EUS). The labour input for registered sector is available from the data of annual survey of industries (ASI) in 2004-05. The estimates of labour input for unregistered manufacturing segment covered under MSME have been derived from the "Fourth All India Census of Micro, Small and Medium Enterprises (MSME), 2006-07" suitably carried backward to the year 2004-05.

The above industrial group-wise estimates of gross product for all groups except the groups of Manufacture of wood & products of wood (NIC-98, code-20) and Manufacture of furniture (NIC-98, code-361) for the year 2004-2005 have been moved with the help of index of industrial production of the relevant groups to arrive at the constant prices estimates for the subsequent years. In case of the groups of Manufacture of wood & products of wood (NIC-98, code-20) and Manufacture of furniture (NIC-98, code-361), the estimates of gross product for the year 2004-2005 have been moved with the help of index of the value of output of industrial wood at constant prices to arrive at the constant prices estimates for the subsequent years.

The current prices estimates have been obtained by superimposing the wholesale price index of the respective group on the constant prices estimates.

6.3 To arrive at the net value added from this sector, the estimates of FISIM and CFC as supplied by the CSO have been deducted from the aggregate gross product.

The detailed estimates of SDP from Unregistered Manufacturing sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 32 and 33.

CHAPTER – VII

ELECTRICITY, GAS AND WATER SUPPLY

Coverage

7.1 The economic activities covered in this sector are:

- (i) Generation, transmission and distribution of electric energy
- (ii) Manufacture of bio-gas and supply of gas through pipe-lines
- (iii) Collection, purification and distribution of water for domestic and industrial consumers.

The operation of irrigation system is, however, excluded and is covered in "Agriculture Sector". The output of liquefied petroleum gas (LPG), which hitherto was included in gas under this sector has now been included under manufacturing sector as the production of LPG is essentially a manufacturing activity.

Methodology and Source Material

Estimates at Current Prices

7.2 The estimates of State Domestic Product of this sector have been obtained by following income approach and have been built up separately for each industry group.

Electricity

7.3 The estimates of SDP from four separate bodies namely Haryana Vidyut Parsaran Nigam Ltd., Haryana Power Generation Corporation Ltd., Uttar Haryana Bijli Vitran Nigam Ltd. and Dakshin Haryana Bijli Vitran Nigam Ltd. have been prepared by analyzing their annual accounts. The compensation to employees including basic wages, dearness allowance, overtime payments, gratuity, contribution to provident fund, pension, other social security and staff-welfare expenses, directors fee, etc. and operating surplus have been taken to form SDP from electricity. The SDP from other two bodies, i. e. Power Generation Corporation and National Thermal Power Corporation has been prepared and supplied by the CSO. The adjustment has been made for FISIM.

Gas

3.6 The estimates of SDP in respect of Gobar Gas are prepared by multiplying the total number of plants installed up to the current year by value of production per plant. The data regarding number of plants installed is made available by the Ministry of Non-conventional Energy Sources and the value of production per plant is estimated on the basis of Khadi and Village Industry Commission (KVIC) data. This data is supplied by the CSO to the States. In the absence of input structure, the value of output of Gobar Gas is treated as value added.

This is based on the assumption that the value of byproducts in the form of indigenous fertilizers (manure) resulted from the manufacturing of gas is equivalent to the value of gobar used therein. The adjustment has been made for FISIM.

Water Supply

7.5 The estimates of State Domestic Product have been prepared separately for public and private part. In Haryana, almost in all the urban and rural areas, the water supply services are being maintained by the State Public Health Department for which the data on wages and salaries and other benefits to staff is available from the State Budget. The data regarding wages, salaries and other benefits for those urban area in which the water supply services are maintained by the municipal committees/corporations is obtained from their annual budgets. The total expenditure on water supply services obtained from the State Budget and municipal committee budgets has been treated as net product from water supply services in the public sector.

7.6 The net value added for Water Supply services in private sector has been taken as a product of work force and the net value added per worker. The total workforce and the workforce of public part available from the NSS, 61st round survey results were used to estimate the workforce of private part for 2004-05. The net value added per worker for 2004-05 has been taken as the average compensation of municipal worker in water supply services supplied by the CSO. The workforce for the subsequent years has been projected with the growth rate observed between 1991 and 2001 census workers engaged in private water supply services. The net value added per worker has been moved to subsequent years with CPI(IW).

Estimates at Constant Prices

7.7 The base year 2004-2005 estimates of GDP from electricity sub-sector have been moved to the subsequent years with the help of quantum index prepared from the data on quantity of electricity consumed.

7.8 In case of gas sub-sector, the GVA for the year 2004-05 is moved to the subsequent years with the number of bio-gas plants.

7.9 In case of water supply sub-sector, estimates of public part at constant prices have been obtained by deflating the current prices estimates of Net Value Added with the consumer price index of industrial workers with base 2004-2005. The base year estimates of NVA of private part have been moved to subsequent years with the growth rate of workforce.

7.10 The estimates of CFC supplied by the CSO has been used to work out the estimates of NSDP.

The detailed estimates of SDP from Electricity, Gas & Water Supply sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 34 and 35.

Sl. No.	Year	Electricity	Gas	Water	NSDP	SDP

CHAPTER -VIII

CONSTRUCTION

Coverage

8.1 This sector covers contract construction by general builders, civil engineering contractors and special trade contractors together with own account construction carried out by independent units of enterprises or other organizations which are not part of construction industry proper. Thus, the activities covered are construction, repair and demolition of buildings, high-ways, streets, culverts, heavy construction, sewers, water mains, rail-road beds, rail road sub-ways, elevated high-ways, bridges, dams, drainage projects, hydro-electric plants, water power projects, sanitation projects, irrigation and flood control projects, land drainage, leveling and reclamation, water wells, communication lines and all other construction works whether undertaken by private bodies or governmental authorities. Due to lack of data, demolition activity has, however, been excluded from this sector.

Methodology and Source Material

Estimates at Current Prices

8.2. The estimates of state domestic product have been prepared by the expenditure approach using the data on expenditure available from the sample surveys, budget documents, annual reports, etc. The estimates of state domestic product of this sector have been prepared separately for public and private sectors.

Public Sector

8.3 The estimates from Public Sector have been compiled under the following components:

- (i) Public Administration
- (ii) Departmental Enterprises of the Government at Central and State level, and
- (iii) Non-departmental Enterprises of the Government at Central and State level.
- (iv) Autonomous Institutions

(i) Public Administration

(a) Central Government Administration: Under this sub-sector, the Central Government Offices located in the State have been covered. The estimates of gross product of construction in respect of this component have been prepared and supplied by the CSO.

(b) State Government Administration: The data regarding expenditure incurred on new construction, repairs and maintenance have been obtained from the report "Economic and Functional Classification of State Government Budget," issued by this department.

(c) **Local Authorities:** Under this sub-sector, local authorities namely municipal corporation/municipal councils/municipal committees, market committees, panchayats, panchayat samities, improvement trusts and cantonment boards have been covered. The information of expenditure incurred by all local bodies except municipal corporation/council/committee has been obtained directly from the concerned authorities. In case of municipal corporation/council/committees, the requisite information has been obtained from the report, "An Economic and Functional Classification of the Budgets of Municipal Committees/Councils/ Corporation in Haryana."

(d) The estimates of GVA from different plan schemes being implemented in the State have been prepared and supplied by the CSO.

(ii) Departmental Enterprises

Under this sub-sector, departmental enterprises also known as Departmental Commercial Undertakings (DCUs) run by the Central and State Governments in the State have been covered.

(a) **Central Government Enterprises:** This sub-sector includes Railways, Communication and Banking & Insurance. The accounts of Railways, Communication and Banking & Insurance are prepared separately under the sub-category of supra-regional sectors. The estimates of Gross Product of construction in respect of these sectors have been prepared and supplied by the CSO.

(b) **State Government Enterprises:** This category includes the activities of Govt. irrigation, forestry, power units, milk supply scheme, Govt. printing presses, civil aviation, road transport, radio & television broadcasting, etc. The data on expenditure incurred by the State Government enterprises on new construction, repairs and maintenance has been obtained from the report, "Economic and Functional Classification of State Government Budget".

(iii) Non-departmental Enterprises

The non-departmental enterprises also known as Non-Departmental Commercial Undertakings (NDCUs) in the public sector are of two types namely (i) Government Companies in which more than 51 percent share capital is held by Central/State Government and (ii) Statutory Corporations setup under special enactment of the Parliament/ State legislation. The SDP estimates of these enterprises have been compiled under the following two components:

(a) **Central Government Non-departmental Enterprises:** The estimates of gross product of construction sector under this component have been prepared and supplied by the CSO.

(b) State Government Non-departmental Enterprises: The estimates have been prepared separately for non-financial enterprises and financial enterprises. The information of expenditure incurred by these enterprises on construction, repairs and maintenance has been obtained directly from them or from their annual accounts.

(iv) The estimates of gross product of Autonomous Institutions in the State have been prepared and supplied by the CSO.

Private Sector

8.4 The estimates of GSDP have been prepared separately for House-hold sector and residual part. In this case also, first the estimates of expenditure on construction have been prepared and thereafter, the estimates of gross product have been arrived at.

(i) Household Sector: The household sector covers rural residential buildings, urban residential buildings, non-residential buildings, plantation (cultivated assets) and other households.

(a) Residential buildings: The estimates of expenditure on new construction, repairs and maintenance of rural and urban residential buildings are available for the year 2002-03 in the All India Debt & Investment Survey (AIDIS), 2002-03 report "Household Capital Expenditure during 1.7.2002 to 30.6.2003" brought out by the NSSO. The estimates of expenditure on new construction, repairs and maintenance for the year 2004-2005 based on the results of AIDIS, 2002-03 are moved to later years with the help of geometric growth rate of rural and urban census dwellings based on 1991 and 2001 population census data. The price change has been superimposed with the index of cost of construction of rural and urban buildings at the State level to obtain the estimates of expenditure at current prices.

(b) Non-residential buildings: The estimates of expenditure on new construction, repairs and maintenance in respect of rural and urban non-residential buildings for the year 2002-03 are also available from the aforesaid report of AIDIS. The estimates of expenditure on new construction, repairs and maintenance for the year 2004-2005 based on the results of AIDIS, 2002-03 have been supplied by the CSO. These estimates of expenditure for the year 2004-2005 are moved to later years with the help of combined index of GVA from agriculture and manufacturing at current and constant prices in the State to obtain the estimates of expenditure at current and constant prices, respectively.

(c) Plantation and other households : The estimates of GVA for this part of construction have been prepared and supplied by the CSO.

(ii) **Residual part:** The estimates of GVA for residual part of construction have been prepared and supplied by the CSO.

8.5 The expenditure on construction as compiled above separately for public sector, urban residential buildings, rural residential buildings and non-residential buildings is converted into the estimates of gross product using the ratio of GVA to expenditure supplied by the CSO.

Estimates at Constant Prices

8.6 In case of public sector, the estimates of GVA at constant prices are arrived at by deflating the current prices estimates of gross product with the index of wages of skilled and unskilled workers for urban area. The GVA estimates of plantation and other households at current prices are deflated with the combined index of building material and labour (rural) to arrive at the estimates at constant prices. The GVA estimates of residual at current prices are deflated with the combined index of building material and labour (urban) to arrive at constant prices estimates.

8.7 From the estimates of gross product so arrived, FISIM has been deducted. The net product has been obtained after deducting CFC from gross product. The estimates of CFC have been supplied by the CSO.

The detailed estimates of SDP from Construction sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 36 and 37.

CHAPTER-IX

TRADE, HOTELS AND RESTAURANTS

Coverage

9.1 The activities considered in this sector are

- (i) Wholesale and retail trade in all commodities both produced at home (including exports) and imported
- (ii) Activities of purchase and selling agents, brokers and auctioneers
- (iii) Services rendered by hotels and other lodging places, restaurants, cafes and other eating and drinking places.

Wholesale trade covers units which resell without transformation new and used goods generally to the retailers and industries, commercial establishments, institutional and professional users or to other wholesalers. Retail trade covers units which mainly resell without transformation new and used goods for personal or household consumption.

Methodology and Source Material

Estimates at Current Prices

9.2 The estimates of gross product for this sector have been prepared separately for public sector, private organized sector and private un-organised sector.

(i) **Public Sector:** Estimates of gross product relating to public sector trading units are based on analysis of annual accounts of public sector trading enterprises. The estimates supplied by the CSO are used as such.

(ii) **Private Organised Sector:** The estimates of gross product prepared by the CSO have been used.

(iii) **Private Unorganised Sector:** The contribution of the unorganized segment has been estimated as a product of work force and value added per worker. For preparing the estimates of this segment for base year 1999-2000 in old series, the estimates of workforce of private unorganized part (rural and urban) were obtained for the benchmark year 1999-2000 by subtracting the estimated workforce in public sector and the private organized segment, available from DGET from the total workforce of the sector estimated from the results of NSS, 55th round survey on Employment- Unemployment, 1999-2000 along with the data on population from the population census 2001. The GVA per worker used for the old series was that of 'all enterprises' category available in informal sector survey conducted in NSS 55th round (1999-2000). As trade has not been covered in the 63rd round of NSSO on service

sector, the GVA for the year 1999-2000 has been moved to 2004-05 with the index of gross turnover based on total sales tax receipts in the State.

For preparing the estimates of hotels and restaurants sub-sector, GVA per worker based on 57th Round (2001-2002) of NSS and workforce estimates based on the results EUS, NSS 55th Round 1999-2000 and population census 2001 were used in the old series with base year 1999-2000. The base year 1999-2000 estimates of gross product prepared separately for urban and rural area were added. The GVA per worker available from Enterprise survey conducted during 63rd round (2006-07) of NSS and workforce estimates from Employment- Unemployment survey, 2004-05 alongwith population Census 2001 could not be used due to certain inconsistencies therein. Therefore, the GVA for the year 1999-2000 has been moved to 2004-05 with the index of gross turnover based on total sales tax receipts in the State.

The base year 2004-2005 estimates of gross product prepared separately above for trade, hotels & restaurants under private unorganized sector have been projected to subsequent years with the index of gross turnover based on total sales tax receipts in the State.

Estimates at Constant Prices

9.3 The estimates at constant (2004-2005) prices have been prepared by deflating the current prices estimates with the wholesale price index of all commodities with base 2004-2005.

9.4 The estimates of gross product from trade, hotels and restaurants are adjusted for FISIM. To arrive at net product, estimates of CFC supplied by the CSO have been deducted from the gross product.

The detailed estimates of SDP from Trade, Hotels & Restaurants sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 38 and 39.

CHAPTER – X

TRANSPORT, STORAGE AND COMMUNICATION

Coverage

10.1 The economic activities covered in this sector are:

- (i) Transport by railways
- (ii) Transport by other means, namely; road transport (mechanised and non mechanized), water transport (coastal, ocean and inland), air transport and services incidental to transport
- (iii) Storage
- (iv) Communication services rendered by Post & Telecommunication Department and Overseas Communication Services.

Railway workshops and railway manufacturing establishments are excluded from railway transport and included in the 'manufacturing' sector. Construction activity of the railways is also excluded and taken into account in the 'construction' sector. Expenditure on education, medical and health services is also excluded here and included in 'other services'. Similarly, the activities relating to post office savings bank, postal life insurance and telecommunication workshops are excluded from communication and included in banking, insurance and manufacturing sectors respectively.

Methodology and Source Material

Estimates at Current Prices

10.2 This sector covers (i) railways, (ii) transport by other means viz. road transport, water transport, air transport and services incidental to transport, (iii) communication services of Post & Telecommunication Department & others and (iv) storage. The estimates of gross product have been prepared by following the income approach and have been built up separately for each industry group.

Railways

10.3 The SDP estimates of this sub-sector are prepared by the CSO and are used as such.

Transport by Other Means

10.4 This sub-sector covers all transport services other than railways and SDP is estimated separately under broad categories as given below:

Road Transport: The estimates have been prepared for mechanized and non-mechanised road transport separately.

(i) **Mechanized road transport:** The estimates of mechanized road transport have been prepared separately for (a) Other Scheduled Regular Passenger Land Transport (Code-6021), (b) Other Non-Scheduled Passenger Land Transport by Motor Vehicles (Code-60221), (c) Freight Transport by Motor Vehicles (Code-60231).

In case of other scheduled regular passenger land transport (6021), the estimates have been prepared separately for public and private sectors. In case of public transport, the estimates at current prices are compiled on the basis of data obtained from the State Budget. These estimates at current prices are deflated with CPI (IW) to obtain estimates at constant prices. The estimates for the base year 2004-2005 in respect of private transport have been worked out separately for rural and urban area by using the workforce available from NSS, 61st round, EUS 2004-2005 and population census 2001 and GVA per worker based on NSS, 63rd round 2006-07. The workforce for the base year is projected to subsequent years with Index based on number of buses and GVA per worker for rural and urban area is moved with the CPI (AL) and CPI (IW) respectively to compile the estimates at current prices for the subsequent years. The base year estimates of GVA are moved to later years with growth rate of workforce to compile estimates at constant prices.

The estimates for the base year 2004-2005 in respect of other non-scheduled passenger transport by motor vehicles (60221) and freight transport by motor vehicles (60231) are compiled separately for rural and urban area by using the estimates of GVA per worker obtained from NSS, 63rd round (2006-07) and workforce estimates based on the results of NSS, 61st round EUS 2004-2005 and population census 2001. The workforce estimates are projected to subsequent years with the index of number of goods vehicles for freight transport and index of number of passenger vehicles for passenger transport other than bus service. The VAPW for rural and urban area is projected to subsequent years with the CPI(AL) and CPI (IW), respectively to compile the estimates at current prices for the subsequent years. The base year estimates of GDP are moved to later years with growth rate of work force to compile estimates at constant prices.

(iv) **Non-mechanized road transport:-** The estimates of Non-Mechanized Road Transport are prepared separately for Non-scheduled Passenger Land Transport Other than by Motor Vehicles i.e. Carts, Bullock Tonga's etc. (Code-60222) and Freight Transport Other than by Motor Vehicles i.e. by man or animal drawn (Code-60232). In case of non-mechanized road

transport, the GVA per worker estimates are based on 63rd round 2006-07 of NSS and workforce estimates are based on the results of NSS, 61st round EUS 2004-2005 and population census 2001. The benchmark year estimates of GVA obtained by multiplying the GVA per worker and workforce have been moved forward with the index of value of output of commodity producing sectors both at current and constant prices.

Air Transport

10.5 In case of Air transport (NIC-98, Code-62), the all India GDP estimates at current prices have been allocated to Haryana State on the basis of the percentage share of workforce of Haryana to All India workforce. The GDP estimates at constant prices have been prepared by deflating the estimates at current prices with the CPI (IW).

Services Incidental to Transport (Code-63-6302)

10.6 The estimates of Services Incidental to Transport (NIC-98, Code-63-6302) for private sector have been worked out by multiplying the workforce based on NSS, 61st round EUS 2004-2005 and population census, 2001 with GVA per worker available from the NSS, 63rd round 2006-2007 adjusted for the base year. The benchmark year estimates of GVA have been moved forward with the index of value of output of commodity producing sectors both at current and constant prices. In case of public sector, the estimates at current prices are supplied by the CSO. These estimates at current prices are deflated with CPI (IW) to obtain the estimates at constant prices.

Storage

10.7 The estimates of State Domestic Product from storage sub-sector have been prepared separately for (i) warehousing, (ii) cold storage and (iii) storage not elsewhere classified.

In case of warehousing, gross product has been obtained by analyzing the annual accounts of Central and State Warehousing Corporation. The value added from Central Warehousing Corporation (CWC) has been allocated to the States in proportion to the capacity of CWC Warehouses in the State to total storage capacity of CWC.

In case of cold storage and the storage not elsewhere classified, the all India GDP estimates at current prices have been allocated to Haryana state on the basis of percentage share of workforce of Haryana state to all India workforce.

Communication

10.8 The estimates of GVA from this sub-sector for public sector are prepared by the CSO and are used as such. The estimates of GVA relating to private communication services have

been prepared for the economic activities namely (i) Courier activities (NIC-98, code-64120), (ii) Activities of cable operators (NIC-98, code-64204) and (iii) Other communication (NIC-98, code-642 (-) 64204). The activity-wise methodology adopted for estimation of GVA is given below:-

Courier Services:- The estimates of GVA for courier services have been prepared by using the estimates of value added per worker from the results of NSS, 63rd round 2006-07 and the corresponding work force estimates based on NSS, 61st round EUS 2004-2005 and population census, 2001 for the base year estimates. For subsequent years, work force is projected using the inter-survey geometric growth rate observed between 1999-2000 and 2004-2005 workforce and VAPW of rural and urban area is moved with the CPI (AL) and CPI (IW) respectively.

Cable Operators:- For this activity, the same methodology has been adopted as in case of courier services.

Other Communication:- The estimates of GVA for private unorganized sector for the benchmark year have been compiled using the estimated VAPW from NSS, 63rd round 2006-07 survey results and the estimated workforce based on NSS, 61st round EUS 2004-2005 and population census, 2001. For the subsequent years, work force is projected using the inter survey geometric growth rate observed between 1999-2000 and 2004-2005 workforce and VAPW of rural and urban areas is moved with the CPI (AL) and CPI (IW) respectively. The estimates of GVA for private corporate sectors has been prepared and supplied by the CSO.

Gross Product from Transport and Storage sub-sectors is adjusted for FISIM. Net product has been obtained after deducting CFC from gross product. The estimates of CFC have been supplied by the CSO.

Estimates at Constant Prices

Railways

10.9 The estimates of gross product at constant prices are prepared by the CSO and are used as such.

Storage

10.10 In case of warehousing, cold storage and not elsewhere classified sub-sectors, base-year estimates of 2004-05 have been projected with the help of index of storage capacity of the respective sub sector to arrive at the estimates at constant prices for the subsequent years.

Communication

10.11 The constant prices estimates of communication sub-sector for public part are prepared and supplied by the CSO. For private unorganized communication services, the constant prices estimates are obtained by multiplying the estimated workforce of the corresponding year with gross value added per worker of the base year 2004-2005. For private organised sector, the constant prices estimates are obtained by deflating the current prices estimates with CPI (IW).

10.12 Gross product from transport and storage is adjusted for FISIM. To arrive at net product, estimates of CFC as supplied by the CSO have been deducted from the gross product.

The detailed estimates of SDP from Transport, Storage and Communication sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 40 and 41, respectively.

CHAPTER-XI

BANKING AND INSURANCE

Coverage

11.1 This sector covers:

- (i) Commercial Banks
- (ii) Banking and Issue Department of RBI
- (iii) Public Non-banking Financial Corporations
- (iv) Organized Non-banking Financial Companies such as stock exchanges and chit funds
- (v) Un-organized Non-banking Financial Undertakings such as professional money lenders and pawn brokers
- (vi) Post Office Saving Banks including operations concerning Cumulative Time Deposits and National Savings Certificates
- (vii) Co-operative Credit Societies and
- (viii) Life and Non-life Insurance Activities.

Methodology and Source Material

Estimates at Current and Constant Prices

11.2 Due to non-availability of State-wise data in respect of this Supra-regional sector, the allocation of SDP shares of the States from the national total is done by the CSO each year both at current and constant prices and communicated to States. These estimates have been taken as such to represent the income from this sector.

The detailed estimates of SDP from Banking and Insurance sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 42 and 43, respectively.

CHAPTER-XII

REAL ESTATE, OWNERSHIP OF DWELLINGS, LEGAL AND BUSINESS SERVICES

Coverage

12.1 The economic activities covered in this sector are:

- i) **Real Estate Services:** This sub-sector includes buying, selling, renting and operating of self owned or leased real estate such as apartment buildings and dwellings, non-residential buildings, developing and sub-dividing real estate into plots, developing and sale of land, etc.
- ii) **Renting of Machinery and Equipments without Operator and Personal and Household Goods:** The activities covered under this category are the activities of renting of machinery and equipments without operator and personal/household goods.
- iii) **Legal Activities:** The activities covered in this category are legal services such as those rendered by Advocates, Barristers, Solicitors, Pleaders, Musketeers etc.
- iv) **Accounting and Book-Keeping:** The activities covered under this category are accounting, book-keeping, auditing and tax consultancy services.
- v) **Research and Development Activities:** This category includes research and development, market research and public opinion polling, business and management consultancy, architectural, engineering & other technical activities, advertising and business activities.
- vi) **Computer and Related Activities/Information and Technology:** The activities covered under this category are hardware consultancy, software consultancy & supply, data processing, data base activities, maintenance & repair of office/accounting/computing machinery and other computer related activities.
- vii) **Ownership of Dwellings:** The economic activities covered in this sub-sector are ownership of dwellings (occupied residential houses) including imputed value of owner occupied dwellings also. The services rendered by non-residential buildings are considered to be a subsidiary activity of the industries, which occupy the buildings and, therefore, are not included in this sector.

Methodology and Source Material

Estimates at Current Prices

Real Estate Services

12.2 In the new series, the GVA estimates at current prices for these services have been worked out separately for rural and urban area by multiplying the GVA per worker with the number of workers engaged in this activity. The GVA per worker estimates for the base year 2004-05 have been obtained from NSS, 63rd round. (2006-07) suitably adjusted for 2004-05 and workforce have been obtained from results of NSS, 61st Round, EUS 2004-05 and population census 2001. For subsequent years, the work force has been projected using annual compound growth rate observed between 1999-2000 and 2004-05 workforce and GVA per worker has been projected using CPI(AL) for rural area and CPI (1W) for urban area.

Renting of Machinery & Equipments, Legal Activities, Accounting & Book-Keeping and Research & Development activities

12.3 The GVA estimates for all above four activities i.e. Renting of Machinery & Equipments, Legal, Accounting & Book-Keeping and Research & Development have been worked out by adopting the same methodology as in case of Real Estate activities.

Ownership of Dwellings

12.4 The GVA for the ownership of dwellings in rural and urban area is equivalent to the gross rental of the residential census houses less the cost of repairs and maintenance. The number of residential houses in urban and rural area during the year 2004-05 is worked out by using the data of residential houses obtained from population census 2001 and compound growth rate recorded between 1991 and 2001 residential census houses. For subsequent years also, the number of rural and urban residential houses have been projected by using the same compound growth rate.

In case of urban area, the residential houses as worked out above and rent per household obtained from the results of 61st Round, NSS on employment and un-employment and consumer expenditure 2004-05 have been used to estimate the gross rental for the year 2004-05. For subsequent years, rent per dwelling has been moved with the CPI (UNME) of house rent sub-group to get the estimates at current prices. The expenditure on repairs and maintenance based on AIDIS, 2002-03 is subtracted from the gross rental to get estimates of GVA.

However, in case of rural area, the methodology for estimating the value added from the dwellings is somewhat different. In the old series, the GVA for the ownership of dwellings in rural area was equivalent to the gross rental of the residential census houses less the cost of repair and maintenance. The residential houses as worked out on the basis of population census 2001 and rent per household obtained from the results of 55th round of NSS, 1999-2000 were used to estimate the gross rental for the year 1999-2000. The residential houses projected on the basis of compound growth between 1999 and 2001 residential census houses and rent per household moved with the CPI (UNME) of rural area were used to estimate the gross rental from rural dwellings at current prices for the subsequent years. In absence of any suitable indicator, half the growth of urban index was assumed to hold good for the rural area. The expenditure on repair and maintenance based on AIDIS, 1991-92 was subtracted from the gross rental to get estimates of GVA. The estimates of value added from the rural dwellings in the new series have been worked out by multiplying the estimates of value added of dwellings in the old series with base 1999-2000 with the All India ratio of value added from rural dwellings in new series with base 2004-05 to value added from rural dwellings in old series with base 1999-2000.

Computer and Related Activities/Information and Technology

12.5 The estimates of GVA have been compiled for organized and unorganized segments separately.

The GVA estimates for organized segment prepared are based on two components i.e. the value of software exported from the State and value of domestic software in the State. As the data relating to the value of domestic software is not available in the State, its value has been worked out from the value of exports of software from the State available from the NASSCOM on the basis of all India ratio of value of domestic software to the value of exports. As suggested by the CSO, the total GVO in the State has been calculated as sum of 82 percent of the value of exports and the value of domestic software. The GSDP has been estimated by taking 68 percent of the GVO of computer software in the State.

The estimates of GVA for the year 2004-2005 for the un-organized segment have been prepared using the data on workforce and value added per worker obtained from the results of NSS, 61st Round, EUS 2004-05 and NSS, 63rd Round (2006-2007), respectively. The estimates have been prepared for rural and urban area separately. The workforce for subsequent years is projected using the population growth rate observed between 1991 and

2001 Census. The GVA per worker for rural and urban area for subsequent years has been projected by using CPI (AL) and CPI (IW), respectively.

Estimates at Constant Prices

Real Estate Services, Renting of Machinery & Equipment, Legal Services, Accounting & Book-Keeping and Research & Development activities

12.6 The base year estimates of SDP for these sub-sectors have been moved to the later years with the growth rate of work force.

Computer and Related Activities

12.7 In case of organized segment, the estimates at constant prices are prepared by deflating the current prices estimates with CPI (IW). In case of unorganized segment, the estimates at constant prices have been prepared by multiplying the workforce of different years with GVA per worker of base year.

Ownership of Dwellings

12.8 In case of urban area, the estimates of gross rental for the base year 2004-2005 have been moved to the subsequent years with the growth rate of census dwellings. The expenditure on repairs and maintenance at current prices has been deflated with the combined index of building material and labour. In case of rural areas, the base year value added from dwellings has been moved with the annual growth rate of dwellings.

12.9 The estimates of Gross Product of Research and Development activities have been adjusted for FISIM.

12.10 To arrive at Net Product, estimates of CFC supplied by the CSO have been deducted from the Gross Product.

The detailed estimates of SDP from Real Estate, Ownership of Dwellings, Legal and Business Services sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 44 and 45.

CHAPTER XIII

PUBLIC ADMINISTRATION

Coverage

13.1 The services included in Public Administration are those rendered by the administrative departments of Central Government, State Government, Autonomous Institutions, Municipal Committees, Notified Area Committees, Market Committees, Improvement Trusts, Zila Parishads, Village Panchayats, Panchayat Samities and Cantonment Boards. It may, however, be stated that this sector does not cover the entire field of activities of Government or local bodies. The activities of departmental commercial undertakings of Government such as, railways, communication, forest, road transport, electricity, irrigation, Government printing presses, milk schemes and defence manufacturing establishments are excluded from this sector and are included in the appropriate industry groups. Similarly, the construction activities undertaken by the Government are covered under the industry group of construction whereas education, medical & health services are included in the industry group of other services. The scope of this sector is, thus, practically the same as that of the industry 'government services' as defined in the Standard Industrial Classification.

Methodology and Source Material **Estimates at Current Prices**

13.2 The estimates of State Domestic Product from public administration are prepared separately for various administrative services covered under this sector. The payments of wages and salaries have been taken to constitute SDP from administrative services. The wages and salaries include basic wages, allowances and honoraria (excluding travelling allowances), wages paid to contingency staff, pension actually paid, employer's contribution to provident fund, if any, and supplement to wages and salaries in cash or kind.

(i) Central Government: The estimates of Gross/Net State Domestic Product from Central Government Administration under the supra-regional sector have been prepared and supplied by the CSO.

(ii) State Government: The budget documents of the State Government provide the detailed information on the expenses incurred by the State Government on its various activities. The data on expenditure on wages and salaries have been culled out from the budget documents. The expenditure shown under pay of officers, pay of establishments, allowances and honoraria (other than traveling allowance) have been taken into account.

The wages and salaries of staff engaged in departmental commercial undertakings, construction activities, education, medical and public health have been excluded from this sector and accounted for in the respective industry groups. In case of minor heads, where break-up of accounts is not available in the budget documents, the details are obtained from the concerned departments. The expenditure on repairs and maintenance is considered as current expenditure and has been included under the industry 'Construction'. The wages and salaries component of contingent expenditure, where it is available, has been taken into account. In case where the details are not available, the same have been ignored.

(iii) Autonomous Institutions: The estimates of SDP relating to services provided by the Autonomous Institutions have been prepared and supplied by the CSO.

(iv) Municipal Committees: Only expenditure on wages, salaries and other allowances has been taken from the major head 'General Administration' in G-I form (budget) of all the municipal committees in the State. The expenditure on education, construction, medical and public health has been excluded from this sector as these have been accounted for in respective industry groups.

(v) Zila Parishads and Panchayat Samities: The expenditure on wages and salaries has been culled out from the annual receipts and expenditure statements of all the Zila Parishads and Panchayat Samities.

(vi) Gram Panchayats: The expenditure on wages and salaries have been obtained from annual statements (Statement No. V) of Panchayat Funds.

(vii) Market Committees, Improvement Trusts and Cantonment Boards: The required data has been collected from all the market committees, improvement trusts and cantonment boards in the State.

Estimates at Constant Prices

13.3 The estimates of value added at constant prices have been obtained by deflating the current prices estimates with CPI(IW) with base year 2004-2005.

13.4 The estimates of CFC supplied by the CSO have been used.

The detailed estimates of SDP from Public Administration sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 46 and 47.

CHAPTER XIV

OTHER SERVICES

Coverage

14.1 The economic activities covered under this sector are :

- (i) Coaching and tuition (NIC-98, codes 80903 and 80904)
- (ii) Education excluding coaching and tuition (NIC-98, codes 80(-) 80903 (-) 80904)
- (iii) Human health activities including veterinary activities (NIC-98, code 851+852).
- (iv) Sewage and refuse disposal, sanitation activities (NIC-98, code 90)
- (v) Activities of membership organizations(+) social work (NIC-98, code 91 + 853)
- (vi) Recreational, cultural and supporting activities(NIC-98, code 92)
- (vii) Washing and cleaning of textiles and fur products (NIC-98, code-9301)
- (viii) Hair dressing and other beauty treatment (NIC-98, code-9302)
- (ix) Funeral and related activities (NIC-98, code-9303-9309)
- (x) Private households with employed person (NIC-98, code-95)
- (xi) Custom tailoring (NIC-98, code-18105)
- (xii) Extra-territorial organizations and bodies (NIC-98, code-99).

Methodology and Source Material

Estimates at Current Prices

14.2 The estimates of SDP from this sector have been prepared by following the income approach. While estimating labor income, the earnings of both primary and secondary workers engaged in such services have been taken into account.

The method generally followed for estimation of value added for different categories of services in the non-public segment is the labour input method i.e. estimated workforce multiplied by the average value added per person in the activity. For the public part, estimates are compiled by analyzing the budget documents of the state.

14.3 **Coaching and Tuition (NIC-98, codes 80903 and 80904):-** In the new series, the GVA estimates at current prices for these services have been worked out separately for rural and urban area by multiplying the GVA per worker with the number of workers engaged in this activity.

The GVA per worker estimates for the base year 2004-2005 have been obtained from NSS, 63rd round (2006-07) suitably adjusted for 2004-2005 and workforce have been obtained from results of NSS, 61st Round, EUS 2004-05 and population census 2001. For subsequent years, the work force has been projected using annual compound growth rate observed between 1999-2000 and 2004-2005 workforce and GVA per worker has been projected using CPI(AL) for rural area and CPI(IW) for urban area.

14.4 Education excluding coaching and tuition (NIC121-98 codes 80 (-) 80903 (-) 80904):-

The activities covered under this compilation category are the activities of public sector institutions and of private education institutions, excluding those of coaching centres and individuals providing tuitions. The GVA for the recognized institutions under public sector has been taken from budget documents. The GVA estimates for private corporate and unorganised institutions have been compiled separately for rural and urban area using the results of NSS, 61st round, EUS 2004-05 and population census 2001 (after excluding the workforce in public sector) for workforce and the results of NSS, 63rd round 2006-07 for VAPW. For subsequent years, the work force has been projected using annual compound growth rate observed between 1999-2000 and 2004-2005 workforce and GVA per worker has been projected using CPI (AL) for rural area and CPI (IW) for urban area.

14.5 Human health activities including Veterinary activities (NIC-98, code 851+852):-

In the new series, the estimates of GVA in human health services have been prepared separately for public and private sectors. The estimates relating to public part of human health including veterinary services are the expenditure on salaries and wages of doctors and other paramedical staff obtained from State Budget documents. The GVA for private corporate sector and unorganized sector have been estimated using workforce estimates available from NSS 61st round (2004-05) and VAPW estimated from the results of NSS 63rd round (2006-07) survey on services sector. For subsequent years, the work force has been projected using annual compound growth rate observed between 1999-2000 and 2004-2005 workforce and GVA per worker has been projected using CPI (AL) for rural area and CPI (IW) for urban area.

14.6 Sewage and refuse disposal, sanitation activities (NIC-98, code 90):-

The estimates of State Domestic Product have been arrived at by adopting income approach and have been prepared separately for public and private part. In case of public part, the GVA is prepared and supplied by the CSO. The GVA for private sector for the benchmark year 2004-05 have been estimated using workforce estimates available from NSSO, 61st round (2004-05) and VAPW estimated from the results of NSS 63rd round (2006-07) survey on services sector. The value added per worker for the year 2004-2005 have been moved forward to the subsequent years using CPI(IW) in case of urban area and CPI(AL) in case of rural area. The workforce for the year 2004-2005 has been moved forward to the subsequent years by using annual compound growth rate observed between 1999-2000 and 2004-05 workforce.

14.7 Activities of membership organizations (+) social work (NIC-98, code 91 + 853):-

This sub-sector includes the services of association of writers, painters, lawyers, doctors, journalists and other similar organizations, activities of trade unions, activities of religious organizations, social work with accommodation etc. The GVA estimates at current prices for these services have been worked out separately for rural and urban area by multiplying the GVA per worker with the number of workers engaged in this activity. The GVA per worker estimates for the base year 2004-2005 have been obtained from NSS, 63rd round (2006-07) suitably adjusted for 2004-2005 and workforce has been obtained from the results of NSS, 61st Round 2004-05 and population census 2001. For subsequent years, the work force has been projected using annual compound growth rate observed between 1999-2000 and 2004-2005 workforce and GVA per worker has been projected using CPI (AL) for rural area and CPI (IW) for urban area.

14.8 Recreational, cultural and supporting activities (NIC-98, code 92):-

In the new series, the estimates of GVA have been prepared separately for public and private sectors. The estimates of GVA for the public sector are compiled from the annual reports of PRASHAR BHARATI. The GVA for private corporate sector and unorganized sector for the year 2004-05 have been estimated using workforce estimates from NSSO, 61st round (2004-05) and VAPW estimated from the results of NSS 63rd round (2006-07) survey on services sectors. For subsequent years, the workforce has been projected using annual compound growth rate observed between 1999-2000 and 2004-05 workforce. The GVA per

worker of base year is moved forward to subsequent years using CPI (AL) and CPI (IW) for rural and urban area respectively.

14.9 Washing and Cleaning of textile and fur products (NIC-98, code-9301), 14.10 Hair dressing and other beauty treatment (NIC-98, code-9302) 14.11 Funeral and related activities (NIC-98, code-9303+9309):-

The GVA estimates for all the above activities have been worked out by adopting the same methodology as in case of Coaching and Tuition activities.

14.12 Private households with employed person (NIC-98, code-95):-

The data on private households with employed persons has not been collected in the NSS 63rd round survey on services sector, as it is not feasible to identify such households as enterprises. The value added generated by this activity relates to wages paid to employed persons by the households. Therefore, the VAPW for this activity in the new series for 2004-2005 has been estimated on the basis of wage data collected in NSS, 61st round 2004-05. The total weekly earnings of the workers falling under this category have been divided by the number of workers to arrive at weekly wages. The GVA estimates in respect of these services have been compiled using average weekly wage per unit of labour input (adjusted for annual wages), separately for rural and urban area and workforce obtained from results of NSS, 61st Round 2004-05 and population census 2001. For subsequent years, the work force has been projected using annual compound growth rate observed between 1999-2000 and 2004-2005 workforce and GVA per worker has been projected using CPI (AL) for rural area and CPI (IW) for urban area.

14.13 Custom tailoring (NIC-98, code-18105):-

The GVA estimates for the base year 2004-2005 have been prepared using NSS, 56th round 2000-01 (unorganized manufacturing) extrapolated data on VAPW and results of NSS, 61st round, EUS 2004-05 and population census 2001 for workforce, separately for rural and urban area. For subsequent years, the work force has been projected using annual compound growth rate observed between 1999-2000 and 2004-2005 workforce and GVA per worker has been projected using CPI (AL) for rural area and CPI (IW) for urban area.

14.14 Extra-territorial organizations and bodies (NIC-98, code-99):-

The activities covered under this category are extra territorial organizations and bodies

including the activities of international organizations such as United Nations and its agencies etc. GVA estimates for these activities are being provided by the CSO.

Estimates at Constant Prices

14.15 The base year estimates of gross/net value added have been moved by relevant physical indicators to arrive at the annual estimates at constant prices for subsequent years. In case of public sector, the current price estimates have been deflated with CPI(1W) to get the constant price estimates. For rest of the services, the growth rate of the workforce has been used to project the base year estimates to subsequent years separately for rural and urban area.

14.16 The estimates of Gross Product are adjusted for FISIM. The estimates of CFC as supplied by the CSO have been used.

The detailed estimates of SDP from Other Services sector for the years 2004-2005 to 2009-10 both at current and constant prices have been given in Tables 48 and 49.
