PREFACE

Industrialisation plays a vital role in the economy of a State. The Index of Industrial Production (IIP) is one of the prime short-term micro economic indicators of the economic development to measure trend in the behavior of the industrial performance over a period of time in comparison to a chosen base year. It indicates the relative change of physical production in the industries sector during a specified year as compared to previous year.

The Department of Economic and Statistical Analysis, Haryana has been compiling the IIP for Haryana State under the guidance of the Central Statistical Organisation (CSO), Govt. of India since 1971-72 and publishes its report periodically. The present report containing information relating to IIP from the year 2007-08 to 2014-15 is the second issue of the series with base year 2004-05. The IIP of State relates to Manufacturing and Electricity Sectors with an analysis of use-based classification of the index numbers.

This report provides an useful information for planners, industrialists and researchers etc. interested in the industrial development of the State.

I take this opportunity to thank the Central Statistical Office, Government of India for providing valuable guidance. The cooperation extended by selected industrial units in providing required production data for computation of IIP is appreciated and acknowledged. Efforts made by the District Statistical Officers for timely collection of production data from various industrial units is also acknowledged.

This report has been prepared by Dr. Devi Dass, Research Officer with the help of Sh. Jagbir Yadav & Sh. Ashok Kumar, Assistant Research Officers and Smt. Krishna Sharma, Senior Scale Stenographer under the guidance of Sh. Bhup Singh Yadav and Smt. Bimla Panchal, Deputy Directors under supervision of Dr. Rajvir Bhardwaj, Joint Director and overall supervision of Dr. N.R. Sheoran, Addl. Director. EXECUTIVE SUMMARY

Industrialisation plays a vital and crucial role in the economic development of an economy. It accelerates economic growth of a State and thereby increases the contribution of industry sector in the State Domestic Product by way of increase in the production and employment. Index of Industrial Production (IIP) is one of the prime indicators of the economic development for measurement of trend in the industrial production over a period of time with reference to a chosen base year.

The Index of Industrial Production for the State is compiled in accordance with the guidelines of the Central Statistical Office (CSO), Govt of India. In the 1st part of the report, detail methodology for selection of items basket, weighting diagram, source of data and computation of index number have been given.

A total of 118 items have been selected from registered manufacturing sector which cover 79.08 percent of total gross value of output of registered manufacturing sector for the year 2004-05. Electricity has been taken as single item. The total weight of industrial sector has been taken as 1000 which has been distributed to Registered Manufacturing & Electricity sectors as per their Gross Value Added (GVA) figures. The weights of registered manufacturing sector have further been distributed at 2/3/4 digit as well as item level as per criteria suggested by CSO. Production data of selected items is collected directly from the selected factories in the State.

Index of Industrial Production presently being prepared in the State with 2004-05 as base year covers Manufacturing and Electricity sectors. Index number has been calculated at sector level, group level (2 digit) and item level. The same has been presented in the report accordingly. Review of index numbers for the year 2014-15 has also been given in the report.

The General Index of Industrial Production with 2004-05 as base year increased from 184.0 in 2013-14 to 194.8 in 2014-15, registering a growth of 5.9 percent. The Index of Manufacturing Sector which carries the highest weight in IIP rose from 177.8 in 2013-14 to 187.6 in 2014-15, exhibiting a growth of 5.5 percent. The Index of Electricity Sector indicates a growth of 9.0 percent as it rose from 252.7 in 2013-14 to 275.4 in 2014-15.

In the last part of the report use-based classification which represents the changing pattern of customers needs, based on taste and habits towards the purchase of industrial product has been given. Review of the use based classification for the year 2014-15 has also been given therein.

The report elaborates that the Index of Basic Goods Industries like urea, pesticides, various items of iron, steel & stainless steel, electricity etc. has moved from 214.5 in 2013-14 to 226.4 in 2014-15, recording an increase of 5.5 percent.

INTRODUCTION

Industrial Sector occupies an important position in Indian Economy and has pivotal role to play in the rapid and balanced economic development. Index of Industrial Production (IIP) is one of the tools for measuring the growth of the industrial sector at a particular point of time. The index shows the relative change over time in the volume of industrial production and is an effective tool to measure the trend of current industrial production. IIP can be defined as a single representative figure (an abstract number) to measure the general level of industrial performance in the economy . It is a short-term micro- economic indicator of industrial growth which is used extensively by Government Departments, Industrial Associations, Research Institutes, Academicians etc. for research and policy making .

Due to liberal industrial policy and close proximity of the State to National Capital, the investment in the industrial sector is growing rapidly. There is need to continuously measure the growth of industrial sector with a view to assess and plan the industrial development schemes in the State. IIP is an effective indicator to assess the performance of State economy under industrial sector over a period of time. The need to prepare IIP was also felt to facilitate comparative studies on performance of various States/ UTs in the industrial sector and to bring uniformity in selection of items basket and preparation of weighting diagram, formula with a common methodology for preparation of IIP.

At the National level, Central Statistics Office (CSO), Government of India prepares all India Index of Industrial Production. The Department of Economic and Statistical Analysis, Haryana is preparing Index of Industrial Production of Haryana since the year 1971-72. A number of State Directorates of Economic & Statistics are also engaged in compiling the State level Index of Industrial Production. The Govt. of India has constituted a Technical Advisory Committee (TAC) for an in-depth examination of various technical issues such as identification of representative items basket for individual State, development of corresponding weighting diagram with an appropriate linkage with the weighting diagram of all India's Index of Industrial Production etc. The TAC resolves technical issues relating to IIP and provides technical guidance in the matter of shifting the base year of current series to new series.

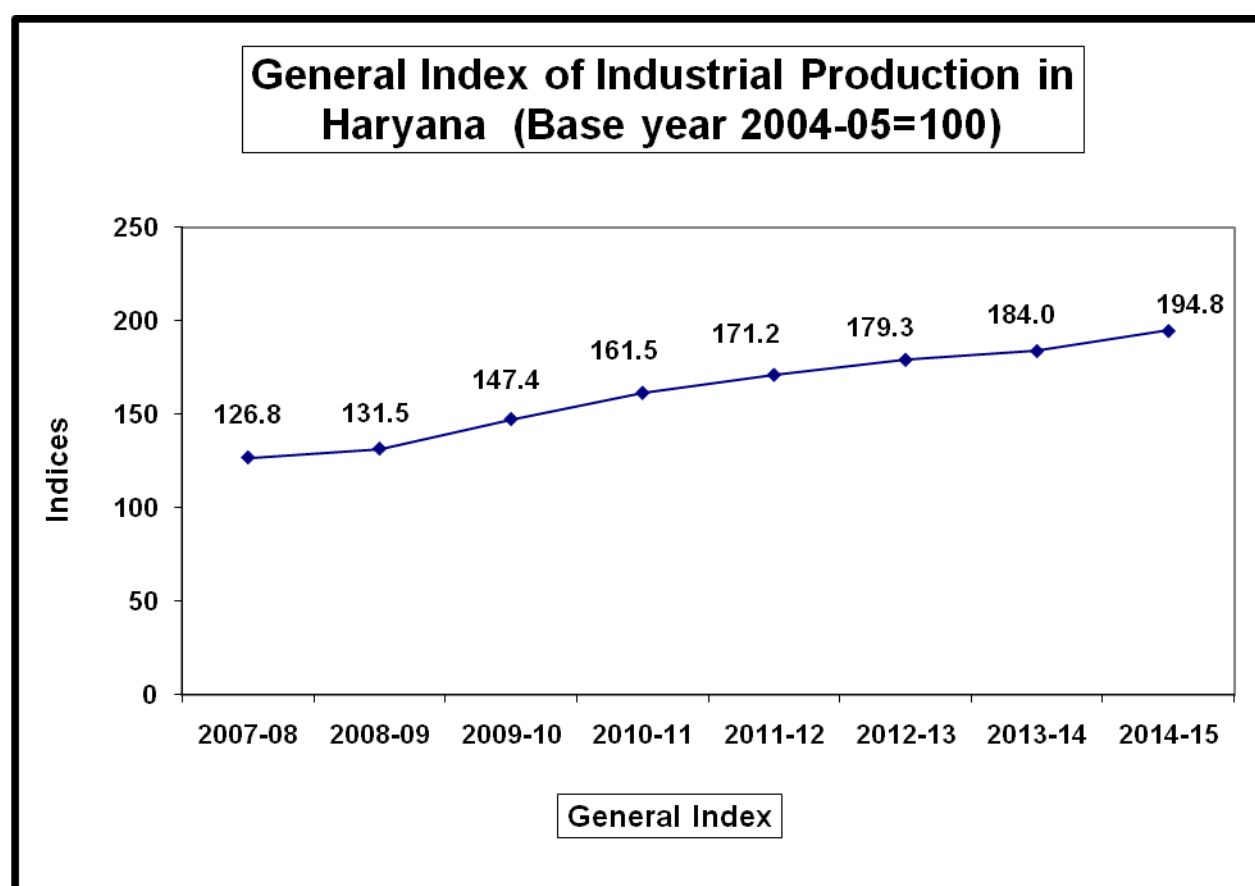

The recommendations of the Technical Advisory Committee on comparable Index of Industrial Production are examined by the Central Statistics Office (CSO), Govt. of India and the guidelines on compilation of State level Index of Industrial Production are prepared. According to criteria laid down in the guidelines issued by Central Statistics Office, the Department of Economic and Statistical Analysis, Haryana selected the items basket and

prepared the weighting diagram for preparation of comparable State level Index of Industrial Production with 2004-05 as base year.

In the present report, the State indices of Industrial Production for Manufacturing and Electricity Sectors for the years 2007-08 to 2014-15 with base year 2004-05 have been given.

The General Index of Industrial Production for the series with base year 2004-05 is as under:-

Year	General Index of Industrial Production (Base Year 2004-05 =100)	Percentage increase/ decrease over previous year
2007-08	126.8	6.2
2008-09	131.5	3.7
2009-10	147.4	12.1
2010-11	161.5	9.5
2011-12	171.2	6.0
2012-13	179.3	4.7
2013-14	184.0	2.6
2014-15	194.8	5.9

METHODOLOGY

Scope and Coverage

The Index of Industrial Production (IIP) is prepared as per National Industrial Classification (NIC) 04 for manufacturing and electricity sectors. The manufacturing sector covers the industries registered under section 2m (i) and 2m (ii) of the factory Act, 1948 and functioning within jurisdiction of Haryana State. The section 2m (i) refers to the units employing 10 or more workers with power and section 2m(ii) refers to the units employing 20 or more workers without power on any day of the preceding twelve months.

Base year

To capture the changes in the industrial sector, the State series of IIP is revised from time to time by dropping obsolete items, including the new items in the items basket and also by shifting the base year to a more recent one. The current State series of IIP has been revised by shifting its base from 1999-2000 to 2004-05 under the over all guidance of Central Statistical Organisation, Govt. of India, New Delhi.

The methodology for compiling an index of industrial production is two fold. The first stage is to identify and select the items to be included in the items basket which could monitor and reflect the performance of the industrial sector. The second stage is to allocate the weights to the items included in the items basket.

Selection of items basket

The State level IIP with base year 2004-05 covers two major industrial sectors viz manufacturing (Registered) and electricity. Mining and Quarrying sector has been excluded due to its insignificant contribution in GSDP which was 0.2 percent in 2004-05 in the State. For selection of items basket, the requisite data based on detailed results of Annual Survey of Industries (ASI) 2004-05 has been supplied by the CSO(ISW), Kolkata. The electricity sector has been taken as single item.

In order to have proper representation at 2 digit level, the items basket for revised series of State IIP with base year 2004-05 has been identified in such a manner that all the items having at least 1.0 percent contribution in the total output of respective 2 digit categories have been taken into account for selection. The criteria for selection of items has been adopted with flexibility keeping in view that the overall size of the items basket remain as manageable. The items included in the items basket have been distinct in nature. The items of similar nature have been grouped together at the items level and such groupings has been done before selection of items in the items basket. Ambiguous items such as other products and by products have been excluded. Most of the items being produced by

single industrial units in the State have also been excluded. Items that are finally selected for compilation of State level IIP are those for which a regular and steady flow of production data is available.

In all 118 items have been selected for the items basket which covers 79.08 percent gross value of output of registered manufacturing sector of the year 2004-05. The selected items have been assigned use based codes i.e. basic goods, intermediate goods, capital goods and consumer goods.

The selected items have been classified under 4 digit industry groups which in turn have been classified under 2 digit industry group. List of selected items of manufacturing (registered) sector alongwith their respective gross value of output have been shown in table no 1.1.

Weighting Diagram

After selection of items weightage of each item in the base year has been determined. For this purpose total weight has been taken as 1000. The total weight of 1000 has been first distributed to registered manufacturing and electricity sectors on the basis of Gross Value Added (GVA) of each sectors for the year 2004-05. The weights of registered manufacturing sector have further been distributed to various 2 digit industry groups (15-36) of NIC 04 in proportion to their GVA figures. After that the 2 digit level weights have further been distributed to represent 3 digit groups which, in turn, distributed to 4 digit classes within the respective 3 digit groups represented in the item basket. Finally the 4 digit level weights have been distributed to selected items in the respective 4 digit classes in proportion to item wise GVO figures. The weighting diagram prepared at item level is further assigned use based categories. Since electricity sector is a single item sector, no apportioning of weight has been done.

Table Number 1.2 shows the distribution of weights for the year 2004-05 at sector level. Distribution of weight among selected groups at 2,3 & 4 digit level of manufacturing sector has been shown in table no 1.3 & 1.4 respectively. Item level distribution of weights of manufacturing sector is available at table no 1.5.

Selection of units

For selection of industrial units for collection of production data for manufacturing sector the unit wise ASI frame of items selected in the items basket for the year 2004-05 is used. Item-wise frame of Industrial units has been supplied by CSO (ISW), Kolkata. The units producing a particular item included in the items basket is first arranged in descending order of production (value of production) and a cut off point not below 70% of the particular item is selected as sample for collection of data from field. Items produced by

upto 2 industrial units have been covered cent percent. The month wise data on generation of electricity taken from the website (www.cea.nic.in) of the Central Electricity Authority is used. In this way, 382 industrial units have been selected for collection of data.

Source of data

For manufacturing sector, the Department of Economic & Statistical Analysis, Haryana has created necessary infrastructure for collection of data regularly from industrial units selected for the purpose. The data is collected directly from the selected industrial units by the District Statistical Offices of the department. Efforts are being made to promote on line system for data collection. For electricity sector, the necessary data is obtained from the website of Central Electricity Authority www.cea.nic.in.

Computation of Index Number

The change in production of selected units producing the item in the current period viz-a-viz their production in base year is relative change in the production of the item. The total production of an item in the current period is estimated using the relative change in production of the selected units.

The Index is computed by using the Laspeyre's Formula : -

$$I = \frac{\sum R_i W_i}{\sum W_i}$$

Where I = Index Number

R_i = Production relative of ith selected item

W_i = Weight assigned to ith item

Σ = Summation of all items within each group upto major group (2 digit) level.

The production relative of an item is defined as percentage growth of the production compared to the base year production.

$$R_i = \frac{P_{ci}}{P_{oi}} \times 100$$

Where R_i = Production relative of ith selected item.

P_{ci} = Current year production of ith item

P_{oi} = Base year production of ith item.

The production relatives are thus calculated at product (4 digit) level of NIC code and the ultimate indices are calculated up to major group (2 digit) level. Sectoral Indices and General Index are based on weighted Laspeyre's Index Number.

INDEX OF INDUSTRIAL PRODUCTION IN HARYANA

Use-Based Classification

The Use-Based Classification represents the changing pattern of customer's needs, based on the tastes and habits towards the purchase of industrial products. The industrial products have been clubbed into four major groups comprising of Basic Goods Industries, Capital Goods Industries, Intermediate Goods Industries and Consumer Goods Industries with a view to analyse the movement of growth rate of different groups of industries and their achievements within the frame of organized sector.

The Use-Based Classification represents the classification of industrial products according to the product applications. Each industry group reflects the variations in the production of a particular class of industries based on product usage. The industries are classified into four groups viz., Basic Goods, Capital Goods, Intermediate Goods and Consumer Goods with sub-groups such as Consumer Durable and Consumer Non-Durable Goods. Concepts and definitions for Use-Based Classification are given below.

(i) Basic Goods

Any bulk raw material product used for further production of new items in manufacturing and agriculture.

(ii) Capital Goods

Plants, machinery and goods used for further investments.

(iii) Intermediate Goods

Any goods product produced as incomplete product or which goes as input in production for further finishing.

(iv) Consumer Goods

a) Consumer Durable Goods

Products directly used by consumers and having a larger durability (say more than 2-3 years).

b) Consumer Non-Durable Goods

Products that are directly used by consumers and that cannot be preserved for long periods.

The share of each use-based industry group to the industry sector of the State and the number of industrial groups and items covered representing the use-based groups are as under: -
