PREFACE

Agriculture plays an important role in a most developed State like Haryana. Consequently, the consumption pattern of cultivators determines the growth of economy of the State. The Study on “Family Budget of Cultivators in Haryana” analyses the household income from different sources, household expenditure and consumption pattern of 119 selected households.

The study indicates an average annual income per household of Rs. 285824 and expenditure 209370 leaving an annual surplus of Rs. 76454 during 2009- 2010. The main source of household income was from farm cultivation which contributed 58.12% of the household income. A major portion i.e. 51.10% of the total expenditure was incurred on food items whereas the remaining 48.90% accounted for non-food items.

The report has been prepared by Smt. Rani, Research Officer with the assistance of Sh. Navdeep, Asstt. Research Officer and Smt. Aruna Chopra, Statistical Assistant under the supervision of Sh. J.S. Dalal Deputy Director and overall guidance of Sh. Sher Singh Yadav Jt. Director and Sh. Bir Singh Consultant. Useful work done by them for bringing out the report is acknowledged. Efforts have been made to improve the quality of the report. Suggestions for further improvement are most welcome.

I hope, this report will prove useful to planners, policy makers, sociologists and administrators who are interested in socio-economic development of the cultivators.

I am thankful to all the selected cultivators of Haryana for maintaining the requisite information on voluntary basis. The cooperation extended by the District Statistical Officers in furnishing the basic data and scrutiny of cultivator records for finalising the study is gratefully acknowledged.

**Report on “Family Budget Of Cultivators
In Haryana” for the year 2009-10**

CHAPTER -I

INTRODUCTION

General

The study on “Family Budgets of Cultivators” in Haryana has been undertaken by selecting 119 cultivator households in the state. The period of study is agriculture year 2009-10 i.e. from July 2009 to June 2010. The study aims at analysing sources of income and expenditure of the cultivators. An attempt has been made to find out the sources of income, pattern of domestic expenditure, dietary habits, standard of living and proportion of consumption of goods produced at farm and purchased from outside.

1.1 Objectives of the Study

- The objectives of the study are as under:-
- i) To find out the extent of contribution by different sources to household income
 - ii) To study the pattern of their domestic expenditure.
 - iii) To find out the proportion of consumption of goods produced at farm and of those procured from outside.
 - iv) To examine the dietary habits of cultivators and their overall standard of living.
 - v) To study the impact of the size of holdings on income and expenditure.

1.2 Methodology

For the main study i.e. "Economics of Farming in Haryana", 238 holdings were selected from different agro-climatic zones of the state, keeping in view the size of holdings, willingness and capability of the cultivators in maintaining the day-to-day record of their income and domestic expenditure in the prescribed format, 119 out of 238 households were selected for conducting the study on "Family Budget of cultivators in Haryana". The results extracted in this study are purely indicative in nature because of the small sample size.

The data is collected from selected cultivators through District Statistical Officers. The selected cultivators were imparted necessary training and Rs.500/- per annum was given to them as an honorarium for recording the data on income and expenditure of the household in the prescribed schedules. The timely supervision was done by the staff of Headquarter and District Statistical Offices to ensure proper recording and accuracy of data.

CHAPTER-II

Sources of Income of Cultivators

General

Introduction of improved technology in the field of agriculture has encouraged the cultivators in the State to adopt latest farm practices, thus enabling them to increase their farm yield per hectare as well as income. To increase their earnings, the cultivators have also diversified their economic activities into dairy farming, poultry and other small enterprises.

2.1 Household size

The size of the family is ranged from below 2.0 to 10.0 & above members. The average size of family was, however, 7. This simple average does not provide a true picture of household size in terms of consumption as it gives equal weight to the Children and Women. Therefore, the Atwater's scale of Adult Male Unit (Appendix –II) has been applied to work out the true family size of the cultivators. Children and Women do not equalize male adult and are, therefore, to be converted to adult male units in order to ascertain their real capacity to earn and spend. This Conversion is universally applied in National Sample Survey and other allied surveys conducted through out the country. According to the "Atwater's Scale of Adult Male Unit of the Chinese Farm Economy by Buck", the average size of family worked out to 5. The selected households members and adult male units have also been classified according to size of holding in table 2.1.

Table 2.1 Number of households and household members according to size of holdings

Sr.No	Size of Holdings (Hectares)	Total number of		Average no. of Adult members per household	Average no. of adult male unit per household

5.	10.0 & Above	2	16	14.6	8.00	7.30
Total		119	773	633.5	6.50	5.32

The above table shows that average no. of members per household of 119 selected families was 7. The maximum average household size of 8 members was observed in the households belonging the holding size group of 10.0 & above hectares whereas it was minimum of 6 members in the household pertaining to holding size group of below 2.0 hectares. The size of holdings i.e. 4.0 -7.5 & 7.5 -10.0 hectares have more household size to the average household size while other size of holdings have less than the average household size.

2.2 Sources of income

The income of cultivators have been classified into following four broad categories:-

- i) Farm cultivation.
- ii) Milk and milk products.
- iii) Interest on capital investment (It includes farm equipments and machinery, farm and residential buildings, milch animals and durable household goods).
- iv) Income from miscellaneous sources such as rent received from leased out land, remittances received from outside, imputed value of fuel, wood and dung cakes, sale of farm yard manure and income from sources other than farm cultivation, etc.

2.3 Net Income of selected cultivators

The source-wise average annual net income per household, per capita and per adult male unit is presented in Table 2.3.

Table 2.3 Net Income of selected cultivators

Total		34013041 (100.00)	285824	44001	53691

Note: Figures in brackets indicate the percentages to the total.

It is observed from the above table that the main source of income of farming families during 2009-2010 was farm cultivation which accounted for 58.12% of their total income. The contribution of the other three sources i.e. (i) milk and milk products (ii) capital investment and (iii) Miscellaneous was 5.57%, 13.24%, and 23.06% respectively. The average annual income per family, per capita and per adult male unit during 2009-2010 has been worked out to Rs. 285824, Rs. 44001 and Rs. 53691 respectively.

2.4 Net Income from farm cultivation

The net income from farm cultivation has been worked out after taking into account gross income and the expenditure on various items of input like hired manual labour, bullock labour, seeds, fertilizers, implements/machinery and tubewells/pumping sets etc. Table 2.4 gives in brief the gross income, total expenditure and net income of selected cultivators.

3.	Net Income	19769945	166134	25576	31207

It has been observed that the average farm income per household, per capita and per adult male unit was worked out to Rs.166134, Rs.25576 and Rs.31207 per annum, respectively.

2.4 (a) Income from farm cultivation and size of holdings

In order to assess the impact of size of holdings on the annual farm income of a household, the size-wise average income per household, per capita and per adult male unit have been worked out. The details in this regard is presented in Table 2.4 (a).

Table 2.4 (a) Income from farm cultivation (Size-wise)

Total	19769945	166134 2557	6 312	07

The above table depicts that the minimum average income per household from farm cultivation for the households belonging to the holding size group of below 2.0 hectares was Rs. 78087 whereas the maximum average income was recorded Rs.514540 in the size group of 10.0 & above hectares. The average per capita income was Rs. 138 54 which is

lowest in the size group of below 2.0 hectares and it was highest Rs. 64318 in the size group of 10.0 and above hectares.

2.5 Income from milch animals and milk products

The net income of all the selected households from milk and milk products and milch animals was worked out to Rs. 1895107 during agricultural year 2009.10. The following table indicates the total number of milch animals owned, milk produced and the income accrued therein.

Table 2.5 Average number of milch animals owned, milk produced and income accrued.

8.	Net income per household (Rs.)	12207	14924	22888	-	15925

The above table shows that the cultivators normally prefer to keep buffaloes for milk production because they yield more milk as compared to cows. The cows were mainly kept for the purpose of supplying male calves to be ultimately used as bullocks in the fields. The annual milk production of all 207 milch animals possessed by 119 households was 3262.85 Qtls. worth Rs. 7521934 and the milk produced per annum per family was 27.42 Qtls. The

net income per household from milch animals after meeting out all the maintenance expenditure on milch animals was Rs. 15925.

2.5 (a) Income from milk production

The total income from milk production of all the selected households has further been classified according to size of holdings to find out the correlation between the income from milk production and the size of holding pertaining to a household in the following Table:-

Table 2.5 (a) Income from milk production according to size of holdings

Table 2.5 (a) reveals that the minimum average income from milk production per household was Rs. 11341 in the holding size group of 4.0 – 7.5 hectares whereas it was the maximum of Rs. 38377 in the size group of 10.0 & above hectares. The average income from milk production per household, per capita and per adult male unit has been worked out to Rs.15925, Rs.2452 and Rs.2991, respectively during the year 2009-10.

2.6 Income from capital investment

13.24% of the annual income of the selected households accrued from capital investment. The imputed income by way of interest @ 8% per annum from capital investment on items such as milch and drought animals, farm equipment and machinery, farm and residential buildings, cattlesheds, wells, tubewells & pumping sets, and durable goods is given in table 2.6.

The average income per household, per capita and per adult male unit from capital investment was Rs.37841, Rs.5825 and Rs.7108 respectively. It may also be observed that the lowest average income of Rs.18452 per household was recorded in the size group of Below 2.0 hectares and the highest of Rs.128652 was registered in the size group of 10 & above hectares.

2.7 Income from miscellaneous sources

The contribution of miscellaneous sources to the total income of cultivators was 23.06 percent. The income from miscellaneous sources has further been classified into nine different categories. The details are presented in Table 2.7.

Total (100.00)		7844956	65924

Table 2.7 indicates that the total income of all the selected households from miscellaneous sources amounted to Rs.7844956. An average annual income of a family from this source was Rs. 65924. The highest contribution of 58.00% came from remittances received from outside followed by 16.21% from pension, 4.44% from fuel, 3.05% from rent, and 0.90% from family labour etc. The remaining contribution of 17.40% was from, manure, honorarium for keeping records of farm accounts and family budgets etc.

2.7 (a) Income from miscellaneous sources according to size of holdings

In order to study the effect of size of holdings of a household on its income from miscellaneous sources, the total income from this source has further been classified in table 2.7 (a).

Table 2.7 (a) Income from miscellaneous sources (size-wise)

Total	7844956	65924	10149	12384

The above table depicts that the highest average income of Rs. 97391 per household from miscellaneous sources was observed in the size group of 4.0- 7.5 hectares whereas it was lowest of Rs. 19200 in the holding size group of 7.5 -10.0 hectares . However, the average income per household, per capita and per adult male unit worked out to Rs. 65924, Rs. 10149 and Rs.12384 , respectively. There is no correlation between the size of holdings and average income per household, capita and adult male unit in case of miscellaneous.

2.8 Income of cultivators according to size of holdings from all sources

It is observed that the size of holdings has a significant effect on the income of the cultivators. Generally, the average income of cultivators increases due to increase in the size of holdings because farmers with large holdings follow better agricultural practices and can afford a better package of inputs. The details of income of cultivators according to size of holdings is given in Table 2.8.

The overall average income per household per capita and per adult male unit from all sources was Rs. 285824, 44001 and 53691 respectively.

CHAPTER-III

Household Expenditure of Cultivators

General

An attempt has been made to throw light on the expenditure made on food and non-food items, annual and daily consumption of food, input and output of milk production and overall financial position of the selected cultivators. The detailed study of the household expenditure of cultivators has been made under the twelve major heads.

3.1 Household expenditure of selected cultivators

The broad head wise household expenditure per family, per capita and per adult male unit is shown in Table 3.1.

The bulk of cultivator's household requirements 63.36% were met from the goods and services purchased from outside while 36.64% of the household requirements were met from the goods produced at their farms. The table further shows that 69.27% and 53.21% of the requirements of food and fuel were met from his own farm, whereas for the remaining items, the farmers were totally dependent on outside sources.

3.4 Expenditure on food items

The table also throws light on the dietary habits of cultivators and clearly establishes that Haryana Cultivator is primarily a vegetarian. His expenditure on milk and milk products was the highest i.e. 62.13% followed by cereals 11.79%, Misc.5.75%, sugar 5.09%, vegetables 5.05%,. The expenditure on meat and meat products was only 0.42%. It is found that 83.86 % of the household expenditure was on cereals, pulses, milk& milk products, edible oils and sugar.

3.5 Consumption of food articles

The annual and daily consumption of various food articles like cereals, pulses, milk & milk products, edible oils and sugar, etc. has also been worked out in Table 3.5 to study the dietary habits of the cultivators.

The daily consumption of desi ghee per household was 113 grams, edible oil 95 grams, sugar 357 grams and gur & shakkar 67 grams. The daily consumption of gram, milk and milk products, desi ghee and edible oil gur & shakkar per adult male unit was 10 grams, 1191 grams, 21 grams, 18 grams and 13 grams respectively.

3.6 Cost of production of milk

Since 62.13% of the total expenditure on food items was incurred on milk and milk products only, hence, it has become essential to discuss in detail the cost of production of milk. The cost of milk production per quintal both for buffaloes and cows has been worked out by taking in to account the various variable and fixed costs. Variable cost includes expenditure on items such as fodder, concentrates, labour (family and hired) medical care, etc. and fixed cost includes interest and depreciation on capital investment made on milch animals and cattlesheds etc.

The cost per quintal and quantity of milk produced is given in the following table:-

Table 3.6 Input/output of milk production

Note:1. For calculation of average input/output, figures of total buffaloes(167) and cows (40) have been used
2. Figures in brackets indicate percentages to total.

Table 3.6 shows that variable cost i.e. fodder and concentrates constitutes about 78 % of the total cost of milk production . The cost of production of milk per quintal in case of buffaloes and cows was worked out to Rs. 1392.88 and Rs.331.64 as against the income of Rs.2033.45 and Rs.484.15 thus resulting a net income of Rs.640.57 and Rs. 152.52 per quintal, respectively. The net income per quintal of buffaloes milk was more or less equal.

3.7 Disposal of milk

Table 3.7 presents the quantity of milk produced, milk sold and consumed in the liquid form or as milk products.

Further, 55.40% of the buffaloes milk was consumed in the liquid form and remaining 44.60% was converted into curd, butter, ghee etc. Out of the total 538.94 qtls. of buffaloes milk sold, 96.76% was sold in the form of liquid and the remaining 3.24% as milk

products. Similarly, out of the total cows milk consumed at home, 55.40% was used in liquid form and the remaining 44.60% in the form of milk products.

3.8 Annual consumption of sugar, gur & shakkar

It is observed that the 5.09% of the total food expenditure was incurred on sugar, gur and shakkar. Therefore, it has become essential to work out the annual consumption of sugar per household. The following table depicts the average quantity and current value of sugar consumed per household, per capita and per adult male unit.

Table 3.8 Annual consumption of sugar

CHAPTER – IV

Summary and Conclusion

An attempt has been made to know the major sources of income & expenditure of the cultivators in the State. The present study highlights the consumption pattern of a household, dietary habits and extent of dependence on goods other than those produced at his own farm.

The main findings of the study based on the analysis of data collected from 119 sample cultivators are as under :-

1. The household size of selected cultivators ranged from below 2.0 to 10.0 & above members. The average size of the household was worked out to 7 members. According to Atwater's Scale, the average size of the family was 5 adult male unit.
2. The average income per household was Rs. 186349 in the holding size group of below 2.0 hectares which progressively increased to maximum of Rs. 726557 .
3. Income from farm cultivation 58.12% and dairying 5.57 % together accounted for 63.69 % of the total income accruing to the cultivator households. Out of the remaining income of 36.31 %, income generated from imputed interest on capital investment was 13.24 % and from other miscellaneous sources such as remittances from outside, income from labour, etc was 23.06 %.
4. During 2009-10, the average annual income and expenditure of the sample households was Rs. 285824 and Rs. 209370 respectively leaving an average annual surplus of Rs. 76454. The corresponding per capita income, expenditure and surplus were Rs.440 01, Rs. 32232 and Rs. 11770 respectively.
5. 51.10 % of the cultivator household expenditure was on food alone. Clothing accounted for 7.36 %, marriage & social ceremony 7.75 %, housing 7.65% and education 12.64 % of the total domestic expenditure. The remaining 13.50 % was on fuel, lighting, health, transport, religious ceremonies and others.

6. Milk and milk products formed the major portion of normal intake of a cultivator's food as 62.13% of the total food expenditure on food items was incurred on milk & milk products, 14.40 % on cereals & pulses, 8.18 % on fruit & vegetables, 5.09 % on sugar and remaining 10.20% on miscellaneous items etc.
7. Haryana cultivator is primarily vegetarian and his expenditure on non-vegetarian items was negligible i.e. 0.42% of the total expenditure on food.
8. The study reveals that a farming family sold 20.45 % of buffaloes milk and the rest was retained to meet domestic requirements. The daily consumption of milk and milk products per adult male unit was 1191 grams.
9. The cost of production of milk per quintal in respect of buffaloes and cows worked out to Rs.1392.88 and Rs. 331.64 respectively.
10. Bicycle was the most common mode of domestic transport i.e. 20.17% families are using bicycles and 52.94% of the households were having motor cycle/scooter.
11. The main source of entertainment of the cultivator families 63.87% was television.

It is interesting to note that the standard of living of the cultivators in Haryana is improving as the percentage of sample cultivators owning items of comforts and luxuries is increasing as all the cultivators owned at least one fan, 62.18% refrigerators, 50.42% LPG connections, 16.81% sewing machines and 34.45 % pressure cookers.
