PREFACE

The present report relates to the annual series on 'Economics of Farming in Haryana' and it refers to the agricultural year 2004-05 (July,2004 to June,2005).

This study provides comprehensive assessment regarding the annual gross income, expenditure and net income from cultivation under irrigated and unirrigated holdings. It also highlights impact of irrigation, cropping pattern, consumption of chemical fertilizers and use of improved agricultural machinery and farm equipments on the yield of various crops and cropping intensity. It also analyses the share of bullock and manual labour as well as machinery deployed in agricultural operations.

The study has revealed that the average gross income per hectare under peasant proprietorship holdings (which form 73% of total selected holdings) was Rs. 45659 and average net income of Rs. 24338 taken together from irrigated and unirrigated holdings whereas the average gross and net income from peasant proprietorship-cum-tenancy holdings was Rs. 55700 and Rs. 22885 respectively.

The report has been prepared by Sh. R.N.Dalal, Research Officer under the supervision of Major SCL Datta, Dy. Economic and Statistical Adviser and overall guidance of Sh. O.P. Dhankhar, Additional Economic and Statistical Adviser. The assistance rendered by Sarvshri Jai Singh Malik, Assistant Research Officer, Baldev Singh, J.F.I. and Smt. Rajwanti, J.F.I., for scrutiny, compilation and tabulation of data is also acknowledged. Typing support was given by Smt. Kamlesh, Stenotypist.

The valuable assistance and active co-operation rendered by the selected cultivators who maintained the record of day-to-day operations in connection with cultivation of their respective holdings is also acknowledged.

I hope this issue will prove useful for the agricultural planners and research workers in the State who are interested in the development of rural economy.

CHAPTER – I INTRODUCTION

General

Agriculture holds the key to prosperity. Despite the decline in the share of agriculture to about one-fourth of Gross State Domestic Product, nearly two third of our population still depends on this sector for their livelihood. In terms of area, agriculture has already reached at a saturation level and almost all the available cultivable land in the state is under plough. Thus, there is hardly any scope to bring more area under cultivation. The agriculture production can only be increased through enhanced cropping intensity, change in cropping pattern, improvement in seeds of high yielding varieties, better cultivation practices and post harvest technology etc., State Govt. is trying to re-orient agriculture in this direction through various policy measures for increasing the production. Considering the importance of this sector, Agriculture wing of this organisation has been bringing out the annual publication "Economics of Farming" which provides useful information on various aspects of farm economy and is greatly helpful in the formulation and evaluation of agricultural development programmes and policies. The study is also highly useful in a small state which is endowed with the variations of soil, topography, climate, cropping pattern and irrigation.

The present report on "Economics of Farming in Haryana" relates to the agricultural year 2004-2005 and covers 232 selected holdings from all the districts of the state.

1.1 Objectives of the Study

The main objective of this study is to make an in-depth study of 'Economics of Farming' in Haryana and to work out the annual investment and net return per hectare under different types and size of holdings. In addition, this study also highlights the following aspects :

- (i) Input-output analysis of various crops.
- (ii) Income, expenditure and net return per hectare under the prevalent forms of cultivation i.e. peasant proprietorship and peasant proprietorship-cum-tenancy .
- (iii) Employment and utilisation of farm capital, manual labour and bullocks labour.

1.2 Method of Data Collection

The study is based on the data collected from the selected cultivators through District Statistical Agencies. Various farm operations were recorded by the selected cultivators in the prescribed registers. To ensure accuracy of data, the record maintained by the farmers regarding this study was supervised and checked both by the staff of Headquarter and the District Statistical Agencies. Each selected cultivator was paid an honorarium of Rs. 225/-per annum for maintaining farm accounts register during the year 2004-05.

1.3 Sampling Design

Multistage sampling design was adopted for conducting the annual field survey. The village was taken as a primary unit and the particular holding was ultimate unit of survey. The farm holdings in the villages have been selected purposively depending on the co-operation, willingness and capability of the cultivators in maintaining the day-to-day record of farm operations. As such, the results and conclusions arrived at in this report are based on the study of sample holdings and, therefore, cannot necessarily be taken to reflect the situation prevailing in the state as a whole.

1.4 Coverage

The study is comprehensive in nature and gives detailed account of 232 agricultural holdings. Out of these holdings, 207 holdings were irrigated, 8 unirrigated and the remaining 17 agricultural holdings were partly irrigated. Various characteristics of farm holdings such as size, tenancy, level of irrigation, area under various crops, agro-climatic conditions, intensity of cropping and yield per hectare have been analysed in the report. The economic impact of various inputs like (i) Manual labour, (ii) Bullock/Camel labour, (iii) Seeds (local and Improved varieties), (iv) Agricultural implements and machinery, (v) Farm yard manure and chemical fertilizers, (vi) Irrigation charges (abiyana and tubewell charges) etc., (vii) Rent (actually paid) and (viii) Miscellaneous inputs e.g. payments made to artisans, cost of insecticides and pesticides etc. have been calculated and shown separately for irrigated and unirrigated areas. Similarly, gross income, expenditure and net income per hectare under peasant proprietorship and peasant proprietorship-cum-tenancy have been worked out to determine the profitability of farming. The holdings have been classified according to various size groups to facilitate group-wise comparison of different inputs and outputs of farm cultivators.

1.5 Agro-Climatic Zones

Haryana consists of different agro climatic zones which are conducive for different variety of crops. To facilitate the analysis of data and to make the study more useful in planning and research for agricultural development, Haryana State has been divided into four homogeneous agro-climatic zones which are as under:-

Sr. No.	Zone	Districts included
1.	Northern	Panchkula, Ambala, Yamunanagar, Kurukshetra, Karnal, Panipat
2.	Central	Kaithal, Jind, Sonipat, Rohtak, Jhajjar
3.	Western	Bhiwani, Hisar, Fatehabad, Sirsa
4.	Southern	Faridabad, Gurgaon, Rewari, Mahendragarh.

CHAPTER - II

ANALYSIS OF FARM ACCOUNT HOLDINGS

2.0 General

This chapter deals with zone-wise and size group wise classification of all the 232 selected farm holdings, the prevalent land tenure system, the extent of irrigation, use of chemical fertilizer per hectare area under different crops and yield per hectare. The capital investment in agricultural machinery & equipment, tubewells & pumping sets has also been worked out along with the maintenance cost of the pair of bullocks. The Micro level data in respect of selected holdings has been presented in Appendices I to III.

2.1 Number and size of farm holdings

The zone-wise number of selected farm holdings, total cultivated area and average size of holdings is presented in the table given below.

Table 2.1 : Zone-wise number and average size of selected holdings

Sr.No.	Zone	No. of farm holdings	Total cultivated area of farm holdings (hectares.)	Average size of holdings (hectares)
1	2	3	4	5
1.	Northern	64 (27.59)	247.09 (29.29)	3.86
2.	Central	58 (25.00)	164.50 (19.50)	2.84
3.	Western	60 (25.86)	243.39 (28.86)	4.06
4.	Southern	50 (21.55)	188.50 (22.35)	3.77
	Total	232 (100.00)	843.48 (100.00)	3.64

Note : Figures in brackets indicate percentage to total.

Table 2.1 shows that the total cultivated area of all 232 selected holdings was 843.48 hectares with an average size of holdings of 3.64 hectares. The average size of holdings was the highest 4.06 hectares in Western zone and the lowest 2.84 hectares in central zone. It may, however, be pointed out that the average size of holdings does not represent the average size of holdings in the state as the selection of farm holdings was purposive in character.

2.2 Land Tenure Systems

There are two types of land tenure systems prevalent in the State i.e. (i) peasant proprietorship where a peasant cultivates his own land with the help of his own family members or hired labourers, (ii) peasant proprietorship-cum-tenant where a farmer cultivates his own land alongwith some land either on rent (cash) or on batai (kind) with the help of his own family members or hired labourers so as to make the cultivation of holding economically viable.

The classification of selected holdings according to prevailing land tenure systems in the different zones is given in Table 2.2.

Table 2.2 : Zone-wise classification of farm holdings under peasant proprietorship and peasant proprietorship-cum-tenancy system .

	(73.28)	(69.52)	(26.72)	(30.48)	(100.00)	(100.00)

Note : Figures in brackets show the percentage to the total number of holdings and total area.

Table 2.2 shows that out of total 843.48 hectares 586.35 hectares (69.52%) belonged to the peasant proprietor cultivators and remaining 257.13 hectares (30.48%) was covered under peasant proprietor-cum-tenant holdings. The peasant proprietor-cum-tenants are represented by small and marginal farmers who had to supplement their holdings by taking land on rent/batai in cash or kind so as to make the cultivation of holding economically viable.

2.3 Classification of cultivated area of selected holdings

Classification of area of the selected holdings under different size groups and land tenure systems is given in the following table :-

Table 2.3 : Classification of selected holdings according to size and land tenure systems.

	(73.28)	(69.52)	(26.72)				(30.48)	(100.00)	(100.00)

Note : Figures in brackets show the %ages to the total number of holdings and total area.

It may be seen from Table 2.3 that out of total 232 farm holdings, 170 holdings (73.28%) and 62 holdings (26.72%) were under peasant proprietorship & peasant proprietorship-cum-tenancy having an area of 586.35 hectares (69.62%) & 257.13 hectares (30.48%), respectively. It may also be inferred from the table that the maximum (43.97%) concentration of holdings was in the size group of 2.0-4.0 hectares and the minimum (2.59%) in the size group of 7.5-10.00 hectares. A majority of the holdings i.e. 70.69% were in the size groups of 2.0-4.0 & 4.0-7.5 hectares whereas 23.70% of the holdings belonged to the smallest size group of below 2.0 hectares. The remaining 5.61% holdings were in the size group of 7.5-10.0 and 10.0 hectares and above during the year 2004-05.

Table 2.4 : Number of holdings by extent of irrigation.

Total	232	207 (89.22)	8 (3.45)	-	2 (0.86)	7 (3.02)	8 (3.45)	

Table 2.4 shows that out of total 232 holdings, maximum number of holdings i.e. 207 holdings (89.22%) were wholly irrigated as many as 8 holdings (3.45%) were totally unirrigated and the remaining 17 holdings (7.33%) were partly irrigated.

Irrigation

Irrigation is a vital input to increase agricultural production. The state has limited water resources viz canal as well as under ground water. The State Government in its plans accords high priority to the provision of adequate irrigation facilities.

Irrigated/Unirrigated area of selected holdings

The zone wise total cultivated area, irrigated and unirrigated area of the selected holdings is presented in the Table 2.4 (a).

Zone	1	2	3	4	5	6	7	8
1	0.00	0.00	0.00	0.00	0.00	0.00	0.00	0.00

Southern	188.50	159.30	29.20	84.51	15.49
Total	843.48	787.77	55.71	93.40	6.60

It may be observed from the above table that 93.40 percent of the cultivated area was under irrigation whereas only 6.60 percent area was found unirrigated during agricultural year 2004-05. The maximum of 98.58% of the total cultivated area in Northern zone was found under irrigation. Whereas it was the minimum of 84.51% in the Southern zone.

2.5 Classification of holdings by number and extent of irrigation in different size groups.

The classification of holdings by number and extent of irrigation in different size groups is given in Table 2.5.

Table 2.5 : Classification of holding by number/area and level of irrigation in different size groups.

				(86.76)		(6.64)	(3.54)		(3.06)

Note :- Figures in brackets show the percentages to the total number of holdings and total area.

It may be seen from Table 2.5 that out of total 232 holdings as many as 102 holdings were in the size group of 2.0-4.0 hectares having a total area of 279.88 hectares, 62 holdings were in the size group of 4.0-7.5 hectares with an area of 320.55 hectares. Whereas only 7 holdings belonged to the size group of 10.0 hectares & above. The table further reveals that 86.76 percent and 10.18 percent of the total area was found fully irrigated or partly irrigated during the year 2004-05 and the remaining 3.06 percent area had no irrigation facility.

2.6 Area under different crops (Irrigated and Unirrigated holdings)

Zone-wise and crop-wise distribution of irrigated/unirrigated area of selected holdings is given in Table 2.6 (a) and 2.6 (b), respectively.

Total of all crops	5.92	6.60	19.20	31.80	63.52 (100.00)

Note : Figures in brackets indicate percentages to total.

It may be observed from the foregoing Tables 2.6 (a) and 2.6 (b) that the total irrigated and unirrigated area of all crops was 1409.16 hectares and 63.52 hectares, respectively.

The percentage of irrigated area under wheat was the highest (37.00) followed by paddy 19.03, oilseeds 9.51 and green fodder 8.36. It may also be seen that the highest (441.11 hectares) irrigated area of all crops was observed in northern zone whereas it was lowest (244.98 hectares) in the southern zone. It may also be seen that southern zone had maximum (31.80 hectares) unirrigated area. Whereas it was minimum (5.92 hectares) in northern zone.

The cropping pattern in unirrigated areas was found to be different than that of the irrigated areas. In case of unirrigated areas, the percentage of area under Gram was the highest (26.45) followed by Wheat (25.36), Oilseeds (21.10) & bajra (13.54).

2.7 Intensity of Cropping

The choice and scope of various crops is determined by assured irrigation facilities and availability of improved high yielding varieties of seeds and other inputs. The cropping intensity is defined as the total cropped area as a percentage to net area sown. The total cropped area under various crops of selected holdings alongwith percentage of irrigated area and intensity of cropping are presented in Tables 2.7 (a) & 2.7 (b) respectively.

Table 2.7 (a) : Area under different crops and crop-wise percentages of irrigated area to the total cropped area.

	Total	1472.68	100.00	1409.16	95.69

It may be observed from the above table that the percentage of area under wheat was the highest 36.49, followed by paddy 18.21, Oilseeds (Rape & Mustard) 10.02, Green fodder 8.34 whereas only 0.50 percent area was under maize. The area under paddy, sugarcane, cotton (desi & american) and pulses was fully irrigated where as 97% of the area under wheat & 90.91% of the area under oilseeds was found irrigated.

The intensity of cropping in irrigated and unirrigated areas of all the four agro climatic zones has been worked out in the following table:-

Table 2.7 (b) : Zone-wise intensity of cropping under irrigated and unirrigated areas.

Zone	Percentage of intensity		Total
	Irrigated	Unirrigated	
1	2	3	4
Northern	181.09	168.66	180.92
Central	184.15	113.79	181.67
Western	190.47	113.63	184.90
Southern	153.79	108.90	146.83
Overall intensity	178.88	114.02	174.95

The average intensity of cropping in the irrigated and unirrigated areas was 178.88 and 114.02, respectively. The western zone recorded the highest intensity of 190.47 whereas it was the lowest of 153.79 in southern zone on irrigated land. In case of unirrigated land, the intensity of cropping was highest (168.66) in northern zone and lowest (108.90) in southern zone. The overall intensity was 174.95% for irrigated and unirrigated areas.

2.8 Output per hectare

The average yield per hectare of sugarcane was 60697 kgs; paddy 4793 kgs; wheat 3997 kgs; barley 3000 kgs; oilseeds 1342 kgs; respectively in irrigated areas. The average yield in unirrigated areas under wheat, oilseeds and barley was 2228 kgs., 1325 kgs., 4500 kgs., respectively. Zone-wise yield per hectare of different crops in irrigated and unirrigated land is given in Table 2.8 (a) & 2.8 (b), respectively.

2.9 Capital investment in farm, agricultural machinery and equipments.

The capital investment has been classified into two broad heads i.e. (a) investment to improve the farm and (b) investment in agricultural machinery and equipments.

(a) The capital investment in farm includes the following :-

- (i) Investment in land such as reclamation, improvement, fencing, terracing and bunding etc.
- (ii) Construction and maintenance of farm buildings, comprising of cattlesheds, tractor sheds, godown and stores etc. (excluding investment in dwelling houses).
- (iii) Acquisition and maintenance of drought animals.

(b) Capital investment in agricultural machinery and equipments includes the following :-

- (i) Agricultural implements and machinery including tractors with accessories, bar harrow, thrasher, cart, iron plough, cane crusher, chaff cutter and gur boiling pan etc.
- (ii) Installation of tubewells / pumping sets and sinking of wells. It also includes the cost of construction and remodeling of kacha and pucca water courses.

Zone-wise details of capital investment in farm and agricultural machinery/equipments are given in Table 2.9 (a)

Table 2.9 (a) : Capital investment in farm agricultural machinery and equipments ;

Investment per hectare	15435	14076	7236	16377	13015

The perusal of the table shows that the total capital investment on farm buildings and drought animals was 25.26% against 74.74% capital investment on Tubewells/pumping sets and machinery & equipments. The capital investment in farm was the highest (36.16%) in central zone whereas it was lowest (7.80%) in southern zone during the year 2004-05. Similarly, in case of agricultural machinery, capital investment ranged between 64% to 93% in different zones. The overall capital investment per hectare was worked out to Rs. 13015.

The percentage investment made in various types of agricultural machinery and equipment, tubewells/pumping sets of selected holdings is shown in Table 2.9 (b).

Table 2.9 (b) : Capital investment in agricultural machinery and equipments and tubewells/pumping sets :

Sr. No.	Implements	Investment (In Rs.)	Percentage

11.	Cane crashers	-	-
12.	Miscellaneous (Triphali-Sohaga, Spray pumps etc.)	642328	7.82
Total		8205016	100.00

It may be observed from the above table that investment on tractor with accessories was 55.44% of the total capital investment on agricultural machinery and equipments followed by 26.37% on tubewells/pumping sets, 3.38% on thrashers, 3.36% on bar harrows and 1.49% on carts, respectively. The rest of the implements accounted for 9.96% of the total capital investment on agricultural machinery and equipments.

2.10 Use of chemical fertilizers

The study of farm accounts also reveals the extent of chemical fertilizers used as an input in the adoption of improved agricultural practices.

It has been observed that all the selected holding were found using chemical fertilizers during the year 2004-05. Crop-wise area of the selected holdings where chemical fertilizers were used is presented in the following table :-

Table 2.10 : Total crop-wise area of holdings where chemical fertilizers were used

	Total	1409.16	1325.92	94.09	63.52	42.57	67.02

The data given in Table 2.10(b) reflects that the percentage of area under chemical fertilizers in the irrigated holdings was the highest (100%) in case of paddy, maize, sugarcane & cotton american, followed by wheat (99.73%), oilseeds (98.96%), barley (96.83%), cotton desi (91.56%) and bajra (75.53%). In case of unirrigated holdings, the chemical fertilizer was found being used in the entire area under maize and barley. Where as it was being put in 80.14% of area under wheat, 64.48% of the area under green fodder and 55.81% of area under bajra.

2.11 Consumption of chemical fertilizers per hectare

The use of chemical fertilizers varied considerably in irrigated and unirrigated holdings. In irrigated areas, the consumption of chemical fertilizers depends on the soil texture and the extent of irrigation facilities available . The consumption of chemical fertilizers per hectare under different crops is given in Table 2.11.

Table 2.11 : Consumption of chemical fertilizers per hectare under various crops during the year 2004-05 ;

	Total	1325.92	353996	266.98	63.52	8702	137.00

It may be seen from the above table that the consumption of chemical fertilizer per hectare in irrigated areas was highest in areas under sugarcane (618.92Kg) followed by paddy (476.15 Kg.), wheat (421.06 Kg.), Barley (241.80 Kg.), Cotton Desi (238.06Kg.) & Cotton American (218.56 Kg.).

In unirrigated areas, the consumption of fertilizer per hectare was highest in areas under Barley (190.00 Kg.) followed by Wheat (170.70 Kg.), Oilseeds (145.52 Kg.) and Maize (130.89 Kg.) overall, the consumption of fertilizer per hectare was 266.98 Kg. in irrigated area where as it was 137.00 Kg. is unirrigated area.

2.12 Operated area per permanent agricultural worker under different types of holdings.

The operated area per permanent agricultural worker in various types of holdings in different zones is given below:-

Table 2.12 : Zone-wise operated area per permanent agricultural worker in various types of Holdings.

(iii) Operated area per agricultural worker	1.44	1.02	1.23	1.09	1.20	

The perusal of Table 2.12 shows that the total operated area per permanent agricultural worker was 1.20 hectares. The operated area per agricultural worker in case of totally irrigated, partly irrigated and unirrigated holdings was 1.18, 1.51 and 0.99 hectares, respectively during 2004-05. The table further indicates that the northern zone claimed the largest operated area i.e. 1.44 hectares per agricultural worker whereas central zone claimed the smallest area of 1.02 hectares.

2.13 Wages of agricultural workers

The prevalent average annual /daily wages of a permanent/casual agricultural worker in the four agro-climatic zones is shown in the following table:-

Table 2.13 : Zone-wise wages of a permanent and casual agricultural worker during 2004-05.

Zone	Wages paid (In Rs.)		
	Annually (**) (Permanent)	Daily (*) (Casual)	
1	2	3	
Northern	21619	87	
Central	21865	105	
Western	20154	101	
Southern	21189	100	
Average	21207	98	

* Exclusive of meal, tea, tobacco charges etc.

** Inclusive of meals, tea, tobacco charges etc.

The data given in Table 2.13 shows that during the year 2004-05, total wages paid to a permanent worker for various agricultural operations worked out to Rs. 21207. Besides, the permanent worker was also given meals, tea, tobacco etc. The daily wages paid to an agricultural worker (casual/hired) excluding daily perks like meals, tea and tobacco were Rs. 98. The daily wages paid to the agricultural worker was the highest (Rs. 105) in central zone and the lowest (Rs. 87) in northern zone.

2.14 Operated area per plough under various types of holdings.

The operated area per plough (Bullocks, Camels and Tractors) during the year 2003-04 under different types of holdings based on irrigation facilities in different zones is given in the following table :-

Table 2.14 : Zone-wise operated area per plough under different types of holdings (Bullocks, Camels and Tractors) during the year 2004-05.

(iii) Operated area per plough	0.80	0.98	1.25	0.86	0.95	

Note :- One Tractor = 8 Pair of Bullocks
One Camel = 1 Pair of Bullocks

It is revealed from the above table that the operated area per plough during the year 2004-05 taking into account both animal and tractor power worked out to 0.95 hectares. The operated area per plough was highest (1.84 hectares) in case of unirrigated holdings.

The area per plough in western zone was found to be maximum (1.25 hectares) where as it was minimum (0.80 Hectares) in northern zone.

2.15 Number of working days per plough under different types of holdings .

The zone wise number of working days per plough under various types of holdings has been worked out in the table 2.15 given below.

Table 2.15 : Number of working days per plough under various types of holdings during 2004-05

(ii) No. of plough	308	168	195	220	891
(iii) No. of working days per plough	49	50	52	54	51

The above table reveals that on an average, a cultivator worked with his plough for 51 days during the year 2004-05. Number of working days per plough in totally irrigated holdings was 51 where as it was found to be 40 only in case of unirrigated holdings but the zone wise number of working days did not varie considerably.

2.16 Maintenance cost per pair of bullocks

The break -up of maintenance cost per pair of bullocks is shown in Table 2.16.

Table 2.16 : Zone-wise break up of the maintenance cost per pair of bullocks during 2004-05.

It may be observed from Table 2.16 that average maintenance cost per pair of bullocks during 2004-05 was Rs. 10810. The expenditure on fodder and concentrates taken together formed 53.10% of the total maintenance cost. The percentage of upkeep labour and interest on capital investment on bullocks was 34.28 and 2.81, respectively. The expenditure on housing (cattleshed) and medical care was merely 8.51% and 1.30%, of the maintenance cost respectively. It was found to be maximum of Rs. 11135 in central zone and minimum of Rs. 10442 in western zone.

Interest on investment in cattle goes down to 2.81% and that on labour to 34.28%. The expenditure on fodder and concentrates forms 53.10% of the total maintenance cost. The expenditure on labour and interest on capital investment on bullocks was 34.28 and 2.81, respectively. The expenditure on housing (cattleshed) and medical care was merely 8.51% and 1.30%, of the maintenance cost respectively. It was found to be maximum of Rs. 11135 in central zone and minimum of Rs. 10442 in western zone.

CHAPTER-III**ECONOMIC ANALYSIS OF SELECTED HOLDINGS****General**

Efforts have been made to present an overall analysis of input and output per hectare of area of the selected holdings. In this chapter, the profit and loss per hectare of area held and cropped by the cultivators under irrigated and unirrigated holdings have been studied and worked out separately.

3.1 Gross Income

Gross income is the total value of the farm produce whether consumed at home, stocked for sale or future use, sold in the market, paid in kind as wages to farm labourers or disposed off in any other way. It consists of the cash value of the produce actually sold and the value of the remaining produce estimated at harvest price prevalent in the village. Crop-wise average gross return per hectare under irrigated and unirrigated holdings has been worked out for each zone separately. The crop-wise and zone-wise average gross income under irrigated and unirrigated holdings have been shown in Tables 3.1(a) and 3.1(b), respectively.

Table 3.1 (a) Zone-wise average gross income per hectare from different crops in irrigated holdings during 2004-05:

It may be seen from Tables 3.1(a) & 3.1(b) that the gross return per hectare of major crops of irrigated holdings has an edge over the gross income of unirrigated holdings. The gross return per hectare of sugarcane, paddy, wheat, oilseeds & green fodder of irrigated holdings was found to be Rs. 63208, Rs. 34908, Rs. 25488, Rs. 22485 and Rs. 16867, respectively. In case of unirrigated holdings, the gross return per hectare of Wheat, Barley, Bajra, Gram and Oilseeds was worked out as Rs. 14262, Rs. 12750, Rs. 3980, Rs. 15833 and Rs. 21436 respectively.

Group-wise gross income, expenditure and net income per hectare of peasant proprietorship and peasant proprietorship-cum-tenancy under irrigated and unirrigated holdings have been presented in Table 3.1 (c).

The figures indicated in Table 3.2 show that gross income per hectare under peasant-proprietorship was highest (Rs. 48873) in the size group of 4.0-7.5 hectares in the irrigated holdings whereas it was minimum (Rs. 36613) in the size group of 10.0 hectares & above. In case of unirrigated holdings, the maximum (Rs. 23235) gross income was recorded in the size group of 2.0-4.0 hectares followed by size group of below 2.0 hectares (Rs. 22679).

The irrigated peasant proprietorship-cum-tenancy holdings recorded the highest (Rs. 64933) gross income per hectare is the size group of 10 hectares & above where as it was found to be the lowest (Rs. 40962) in the size group of below 2.0 hectares.

The peasant proprietors of irrigated holdings incurred an expenditure of Rs. 21781 per hectare where as it was Rs. 32906 in case of peasant proprietor-cum-tenants. The corresponding figures for unirrigated holdings were worked out to be Rs. 10736 and Rs. 14062 with an overall average of Rs. 21321 and 32815 respectively.

3.2 Input-Output analysis of the holdings

The main objective of this study is to find out the input-output ratio under two types of land tenure systems. Before assessing the gross income, expenditure and net income per hectare from cultivation on the sampled holdings, it is worthwhile to explain about the land tenure systems namely peasant proprietorship and peasant proprietorship-cum-tenancy prevalent in the state.

(A)- Peasant Proprietorship

A peasant proprietor possess the right of ownership. He has the right to sell, transfer it by gift, mortgage or pass it on to descendants. He cultivates the land with his own family members. The cost of cultivation under this system includes manual labour (excluding imputed value of wages

of family workers and exchange labour), bullocks labour (excluding imputed value of bullocks, upkeep labour by family workers), seeds, farm yard manure, chemical fertilizers, irrigation charges (including tubewell electricity bills, canal water charges, repair of tubewell etc.), implements and machinery, interest on capital investment (excluding depreciation on capital investment), payments made to artisans, cost of spray of insecticides/pesticides etc. and miscellaneous costs (cost of bunding, fencing and land leveling etc). The rental value of owned land has been excluded from this cost.

(B) Peasant proprietorship-cum-tenancy

A peasant proprietor-cum-tenant acquires some additional land on rent/batai in addition to his own land to supplement his income. The terms and conditions of rent lease i.e. cash or kind depend on local conditions and urgency of his requirements. He is assisted by his family members and seeks hired labour in agricultural operations. The cost of cultivation under this system includes manual labour (excluding imputed value of wages of family workers and exchange labour), bullocks labour (excluding imputed value of upkeep labour), seeds, farm yard manure, chemical fertilizers, irrigation charges (tubewell electricity bills, canal water charges and repairs etc.), implements and machinery, interest on capital investment, payments made to artisans, cost of spray of insecticides/pesticides etc. and miscellaneous costs (cost of bunding, fencing and land leveling etc.) and rental value of leased in land.

The gross income, expenditure and net income per hectare (zone-wise) under peasant proprietorship & peasant proprietorship-cum-tenancy system have been calculated separately for irrigated and unirrigated areas and is shown in Table 3.3.

Table 3.2(a) : Zone-wise net income per hectare of peasant proprietorship and peasant proprietorship-cum-tenancy under irrigated and unirrigated holdings separately during 2004-05:

Overall average	45659	21321	24338	55700	32815	22885

It is observed from the above table that overall average gross income, expenditure and net income per hectare for irrigated and unirrigated areas taken together for holdings under peasant proprietorship worked out to Rs. 45659, Rs. 21321 and Rs. 24338, respectively. Where-as for holdings under peasant proprietorship-cum-tenancy it was worked out to be Rs. 55700, Rs. 32815

and Rs. 22885, respectively. The table further shows that gross income per hectare in irrigated areas under peasant proprietorship systems was the highest (Rs. 57947) in northern zone whereas the lowest (Rs. 30178) income was recorded in southern zone. In case of holdings under peasant proprietorship-cum-tenancy system the highest (Rs. 59966) per hectare gross income was observed in northern zone where as it was the lowest of Rs. 28738 in the southern zone.

3.3 Comparative position of net income under two types of land tenure systems.

The group wise & zone-wise data regarding net income per hectare under peasant proprietorship & peasant-proprietorship-cum-tenant system of holdings has been worked out in Table 3.3.

Table 3.3 : Group-wise and zone-wise net income per hectare according to peasant proprietorship & peasant-proprietorship-cum-tenancy system :

Inferences can be drawn from the above table that the holdings under peasant proprietorship are more profitable than the peasant proprietorship-cum-tenancy system. The overall average net income per hectare of the operated area of a peasant proprietorship and peasant proprietorship-cum-tenancy was Rs. 24338 and Rs. 22885, respectively under different size groups as well as in zones during 2004-2005.

CHAPTER - IV**SUMMARY AND CONCLUSION**

The report on 'Economics of Farming in Haryana' provides a comprehensive analysis of a cultivator's farm economy and highlights in depth his gross income, expenditure and net income per hectare of irrigated and unirrigated holdings. Besides, it gives information about the extent of use of improved seeds, agricultural implements and machinery, consumption of chemical fertilizers, labour and employment etc. The present report makes a detailed study of 232 selected holdings under two commonly practised systems of land tenure i.e. peasant proprietorship and peasant proprietorship-cum-tenancy.. The main findings of the study are as under :-

1. The total operated area of 232 selected holdings under this study was 843.48 hectares. Out of which, the area under peasant proprietorship and peasant proprietorship-cum-tenancy was 586.35 hectares and 257.13 hectares respectively. The average size of holdings was 3.64 hectares.
2. Out of total 232 selected holdings, 207 holdings (89.22%) were irrigated and 8 holdings (3.45%) were unirrigated. The remaining 17 holdings (7.33%) were partly irrigated. The analysis has further revealed that 93.40% of the area held under selected holdings was irrigated. The average intensity of cropping on irrigated and unirrigated areas of selected holdings worked out to 178.88% and 114.02%, respectively. The overall intensity was 174.95%.
3. The study revealed that the great difference was found in the cropping pattern under irrigated and unirrigated areas. In case of irrigated areas, the percentage of cultivated area under cereals, pulses and cash crops was 62.81, 1.38 and 21.99 as against 43.48, 26.45 and 21.10 respectively in case of unirrigated areas.
4. The study further indicated that all the selected holdings were found using chemical fertilizers. The average consumption of chemical fertilizers per hectare in irrigated and unirrigated area was 266.98 kgs., and 137.00 kgs., respectively.
5. The total capital investment per hectare was found to be Rs.13015, out of which 74.74% was utilised for agricultural machinery & tubewell/pumping sets and remaining 25.26% on farm building, cattlesheds and drought animals.
6. The average operated area per permanent agricultural worker was 1.20 hectares. A permanent hired agricultural worker was paid Rs. 21207 per annum inclusive of meals, tea & tobacco charges while a casual daily wage worker was given Rs. 98 per day exclusive of meal, tea & tobacco charges.
7. Average yield per hectare of paddy, wheat, bajra, maize, barley, gram, oilseeds & sugarcane was 4793 kgs., 3997 kgs., 1460 kgs., 1734 kgs., 3000 kgs., 933 kgs., 1342 kgs., and 60697 kgs., respectively on irrigated land as compared to 2228 kgs. yield of wheat, 1015 kgs. bajra, 1466 kgs., of maize, 952 kgs. of gram and 1323 kgs. of oilseeds under unirrigated land.

8. The gross income per hectare of different crops like wheat, gram, sugarcane & oilseeds was Rs. 25488, Rs. 12302, Rs. 63208 and Rs. 22485 respectively in irrigated areas. In case of unirrigated holdings, the gross return per hectare of Wheat, Barley, Bajra, Gram and Oilseeds was worked out as Rs. 14262, Rs. 12750, Rs. 3980, Rs. 15833 and Rs. 21436 respectively.

9. The average gross income of a peasant proprietor per hectare worked out to Rs. 46760 on irrigated areas as against Rs. 20344 on unirrigated areas. The average net income per hectare was calculated at Rs. 24979 from irrigated areas as compared to Rs. 9608 from unirrigated areas. In case of peasant proprietorship-cum-tenancy holdings, the average gross income per hectare was found to be Rs. 55922 on irrigated areas as against Rs. 9628 on unirrigated areas.

10. The gross income per hectare of operated area under peasant proprietorship & peasant proprietorship-cum-tenancy system of holdings was Rs. 45659 & Rs. 55700 respectively during the year 2004-2005.

11. The study further concluded that per hectare expenditure incurred by the sampled cultivators from farm cultivation was Rs. 21321 & Rs. 32815 respectively under peasant proprietorship & peasant proprietorship-cum-tenancy system of holdings .

12. The net income per hectare of operated area came out to Rs. 24338 for peasant proprietors whereas it was found to be Rs. 22885 for peasant proprietor-cum-tenants during 2004-05.
