CHAPTER –I INTRODUCTION

1.0 General

The study on “Family Budget of Cultivators” in Haryana has been undertaken by selecting 140 cultivator households (one from each Block) in the State. The period of study is an agricultural year 2019-20 i.e. from 1st July 2019 to 30 June 2020. The study aims at analysing sources of income and expenditure of the selected cultivators. An attempt has been made to find out the sources of income, pattern of domestic expenditure, dietary habits, standard of living and proportion of consumption of goods produced at farm and purchased from outside.

1.1 Objectives of the study

The objectives of the study are as under:-

- i) To find out the extent of contribution by different sources of household income;
- ii) To study the pattern of their domestic expenditure;
- iii) To find out the proportion of consumption of goods produced at farm and of those procured from outside;
- iv) To examine the dietary habits of cultivators and their overall standard of living;
- v) To study the impact of the size of holdings on income and expenditure.

1.2 Methodology

For the main study i.e. "Economics of Farming in Haryana" 280 holdings were selected (two from the each Block) in the State, keeping in view the size of holdings, willingness and capability of the cultivators in maintaining the day-to-day record of their income and domestic expenditure in the prescribed schedules, 140 out of 280 households, (one from each Block) were selected for conducting the study on "Family Budget of Cultivators in Haryana". The results extracted in this study are purely indicative in nature because of the small sample size.

The data is collected from selected cultivators under supervision of District Statistical Offices to ensure proper recording and accuracy of data. The selected cultivators were imparted necessary training and ₹ 1000/- per annum was given as honorarium for recording the data on income and expenditure of each household in the prescribed schedules. The supervision was also done by the officers /officials from time to time.

CHAPTER-II

Income of Cultivators

2.0 General

Introduction of improved technology in the field of agriculture has encouraged the cultivators in the State to adopt latest farm practices, thus enabling them to increase their farm yield per hectare as well as to increase income also. To increase their earnings, the cultivators have also diversified their economic activities into dairy farming, poultry and other small enterprises. For the present study, the income of the selected cultivators has been classified into following four broad categories are as:-

- i) Farm cultivation;
- ii) Milk and milk products;
- iii) Interest on capital investment (It includes farm equipments and machinery, farm and residential buildings, milch animals and durable household goods);
- iv) Income from miscellaneous sources such as rent received from leased out land, remittances received from outside, imputed value of fuel, wood & dung cakes, sale of farm yard manure, income from sources other than farm cultivation etc.

2.1 Household size

The size of the selected cultivator families ranged from 5 to 7 members. However, the average size of family was 4. This simple average does not provide a true picture of household size in terms of consumption as it gives equal weight age to the children and women. Therefore, the Atwater's scale of Adult Male Unit (Appendix –II) has been applied to work out the true family size of the cultivators. Children and women do not equalize male adult and are, therefore, to be converted to adult male units in order to ascertain their real capacity to earn and spend. This conversion is universally applied in National Sample Survey and other allied surveys conducted throughout the country. According to the "Atwater's Scale of Adult Male Unit of the Chinese Farm Economy by Buck", the average size of family worked out to 4. The selected households members and adult male units have also been classified according to size of holdings presented in table 2.1.

The Table 2.1 shows that average number of members per household in 140 selected families was 6. The maximum average household size of 7 members was observed in the households belonging to the holding size group of 7.5-10.0 hectares whereas it was minimum of 5 members in the households pertaining to holding size group of below 2.0 hectares during the year 2019-20.

Note: Figure in brackets indicate the percentage to the total.

It is observed from the above table that the main source of income of selected households is farm cultivation which accounted for 47.56% of their total income. The contribution of the other three sources i.e. (i) milk and milk products (ii) capital investment and (iii) miscellaneous, are 5.65%, 18.17% and 28.62%, respectively. The average annual income per household, per capita and per adult male unit have been worked out as ₹ 601529, ₹ 107553 and ₹ 139891, respectively.

2.3 Income of cultivators according to size of holdings

It is observed that the size of holdings has a significant effect on the income of the cultivators. Generally, the average income of cultivators increases with the increase in the size of holdings because farmers with large holdings follow better agricultural practices latest technology and can afford a better package of inputs. The detail of income of cultivators according to size of holdings during the year 2019-20 is given in Table 2.3.

The table further shows that 71.01% and 63.92% of the requirements of food and fuel were met from their own farm, whereas for the remaining items, the farmers were totally dependent on outside sources.

3.4 Expenditure on food items

It has been observed from the table 3.3 that 51.21% of the total household expenditure was incurred on food items only. Thus, it has become imperative to further study the pattern of household expenditure on various food items. All the food items have been summarized into various broad groups which are as under:-

3.5 Consumption of food items

The annual and daily consumption of various food articles like cereals, pulses, milk & milk products, edible oils, sugar etc. has also been worked out in Table 3.5 to study the dietary habits of the cultivators. It is observed that wheat is the staple food of selected cultivators because its daily consumption per adult male unit was 435 grams as compared to 50 grams of rice. The daily consumption per adult male unit of grams, maize, bajra, grams & others, milk and milk products, desi ghee, edible oil, sugar and gur & shakkar per adult male unit were 20 grams, 11 grams, 25 grams, 38 grams, 1735 grams, 49 grams, 27 grams, 90 grams and 23 grams, respectively. 3.6 Cost of production of milk

Since 59.36% of the total expenditure on food items was incurred on milk and milk products only, hence, it has become essential to discuss in detail the cost of production of milk. The cost of milk production per quintal both for buffaloes and cows has been worked out by taking into account the various variable and fixed costs. Variable cost includes expenditure on items such as fodder, concentrates, labour (family and hired) medical care etc. and fixed cost includes interest and depreciation on capital investment made on milch animals and cattlesheds etc.

The cost per quintal and quantity of milk produced is given in the following table:-

Table 3.6 shows that variable cost i.e. fodder and concentrates constitute about 72.34% of the total cost of milk production. Total milk production of buffaloes and cows was 4519.00 quintals. The cost of production of milk per quintal in case of buffaloes and cows was worked out to ₹ 3228.00 as against the income of ₹ 4562 thus resulting a net income of ₹ 1334 per quintal.

3.7 Disposal of milk

Table 3.7 presents the quantity of milk produced, milk sold and consumed in the liquid form or as milk products. 69.58 % of the total buffaloes milk produced was consumed at home and only 30.42 % was sold. Further 49.55% of the buffalo's milk was consumed in the liquid form and remaining 50.45% was converted into curd, butter, ghee etc. Out of the total 922.24 quintals of buffaloes milk sold, 96.91% was sold in the form of liquid and the remaining 3.09% as milk products. Similarly, out of the total cow's milk consumed at home, 51.56 % was used in liquid form and the remaining 48.44 % in the form of milk products.
