PREFACE

Industrialisation plays a vital role in the economy of a State. The Index of Industrial Production (IIP) is one of the prime short-term micro economic indicators of the economic development to measure trend in the behavior of the industrial performance over a period of time in comparison to a chosen base year. It indicates the relative change of physical production in the field of industries during a specified year as compared to previous year.

The Department of Economic and Statistical Affairs, Haryana has been compiling the Index of Industrial Production for Haryana State under the guidance of the National Statistical Office (NSO), Govt. of India since 1971-72 and publishes its report on annual basis. The present report containing information relating to IIP from the year 2021-22 is the fifth issue of the series with base year 2011-12. This Index of Industrial Production of Haryana State relates to Manufacturing and Electricity Sectors with an analysis of use-based classification of the index numbers.

This report provides an useful information for planners, industrialists and researchers etc. interested in the industrial development of the State.

I take this opportunity to thank the National Statistical Office, Government of India for providing valuable guidance. Efforts made by the District Statistical Offices for collection of production data from various industrial units are also acknowledged. The cooperation extended by various industrial units of the State for providing required production data for computation of IIP are appreciated and acknowledged.

This report has been prepared by Sh. Rajender Singh Bhoria, Research Officer with the help of Sh. Raj Kumar Hooda, Assistant Research Officer and Mr. Narender Maan, Data Entry Operator under the overall supervision of Smt. Harjeet Kaur, Deputy Director and Sh. EXECUTIVE SUMMARY

Industrialization plays a vital and crucial role in the economic development of an economy. It accelerates economic growth of a State and thereby increases the contribution of Industry Sector in the State Domestic Product by way of increase in the production and employment. Index of Industrial Production (IIP) is one of the prime indicators of the economic development for measurement of trend in the industrial production over a period of time with reference to a chosen base year.

The Index of Industrial Production for the State is compiled in accordance with the guidelines of the National Statistical Office (NSO), Govt. of India. In Part-I of the report, the detailed methodology, sources of data and computation of index numbers have been presented.

A total of 178 items have been selected from Registered Manufacturing sector for the year 2011-12. Electricity has been taken as a single item. Mining and Quarrying sector has been excluded due to its insignificant contribution in GSDP which was 0.04% in 2011-12 in the State. The total weight of Industrial Sector has been taken as 1000 which has been distributed to Registered Manufacturing & Electricity sectors. The weights of Registered Manufacturing sector have further been distributed at 2/3 digit as well as item level as per criteria suggested by NSO. Production data of selected items are collected directly from the selected factories in the State.

Presently, Index of Industrial Production is being prepared in the State with 2011-12 base year and covers Manufacturing and Electricity sectors. Index number has been calculated at sector level, group level (2 digits) and item level. The same has been presented in the report accordingly. Review of index numbers for the year 2021-22 has also been given in the report.

The General Index of Industrial Production with 2011-12 base year increased from 151.2 in 2020-21 to 169.2 in 2021-22 registering a growth of 11.9 percent. The Index of Manufacturing sector which carries the highest weight in IIP increased from 158.1 in 2020-21 to 174.6 in 2021-22, positive growth of 10.4 percent. The Index of Electricity sector indicates a positive growth of 60.9 percent as it is increased from 61.9 in 2020-21 to 99.6 in 2021-22.

In last part of the report, the use-based classification which represents the changing pattern of customer's needs, based on taste and habits towards the purchase of industrial product has been given. Review of the use-based classification for the year 2021-22 has also been given therein. The report elaborates that the Index of Primary Goods Industries like argon gas, urea, bitumen, LPG cylinder of iron and steel, electricity etc. has increased from 57.4 in 2020-21 to 90.7 in 2021-22 which recorded an increase of 58.01 percent.

The Index of Capital Goods Industries like conveyor belts, tractor tyres, link forging, optical components, acephate/speedometer, diamond tools, spring pins etc. decreased from 209.2 in 2020-21 to 207.6 in 2021-22, which recorded a decrease of 0.76 percent.

The Index of Intermediate Goods Industries like plywood boards, wooden chips, cast iron, stone dust powder, motor vehicle seats etc. has increased from 173.8 in 2020-21 to 174.6 in 2021-22, recording a growth of 0.46 percent.

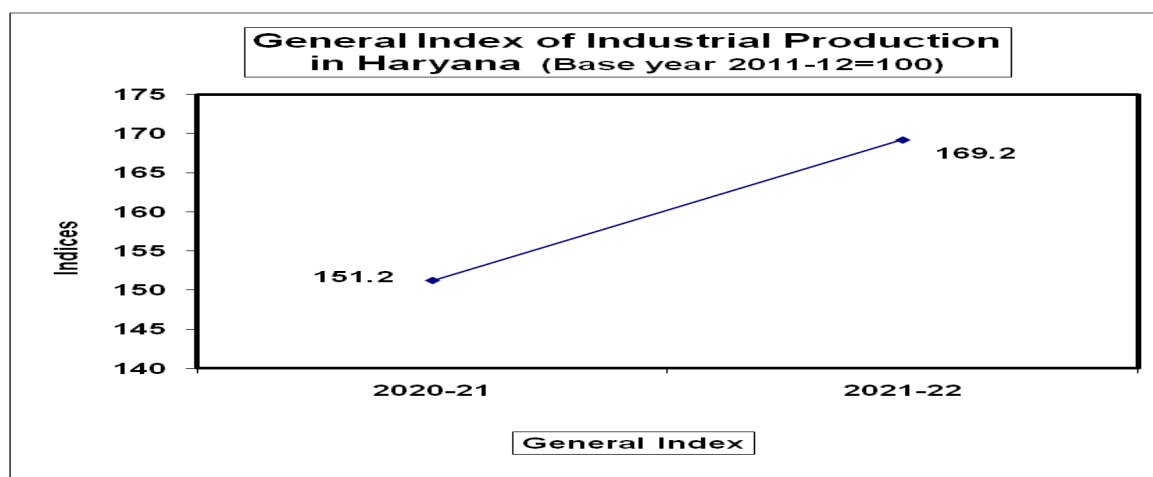

The Index of Infrastructure/Construction Goods Industries like paints, ceramic tiles, scrap cast iron etc. has increased from 110.0 in 2020-21 to 127.6 in 2021-22, recording a positive growth of 16 percent.

The Index of Consumer Durables Industries like cotton fabrics, blankets, artificial fur hand bags, books, rexin, button plastic, glass components, water pump, AC motor car etc. has increased from 151.6 in 2020-21 to 208.7 in 2021-22, registering a positive growth of 37.7 percent.

The Index of Consumer Non-Durables Industries like dried vegetables, milk, rice basmati, sugar, biscuits, black tea, waste paper etc. has decreased from 53.8 in 2020-21 to 40.8 in 2021-22, which registering a negative growth of -24.1 percent.

The General Index of Industrial Production for the series with base year 2011-12 is as under:-

Year ↓	General Index of Industrial Production (Base Year 2011-12 =100)	Percentage increase/ decrease over previous year
2020-21	151.2	-2.1

Index of Industrial Production

Haryana

INTRODUCTION

Industrial sector occupies an important position in Indian Economy and has pivotal role to play in the rapid and balanced economic development. Index of Industrial Production (IIP) is one of the tools for measuring the growth of the industrial sector at a particular point of time. The index shows the relative change over time in the volume of industrial production and is an effective tool to measure the trend of current industrial production. IIP can be defined as a single representative figure (an abstract number) to measure the general level of industrial performance in the economy. It is a short-term micro- economic indicator of industrial growth which is used extensively by Government Departments, Industrial Associations, Research Institutes, and Academicians etc. for research and policy making.

Due to liberal industrial policy and close proximity of the Haryana State to National Capital, the investment in the industrial sector is growing rapidly. There is need to continuously measure the growth of industrial sector with a view to assess and plan the industrial development schemes in the State. IIP is an effective indicator to assess the performance of State economy under industrial sector over a period of time. The need to prepare IIP was also felt to facilitate comparative studies on performance of various States/ UTs in the industrial sector and to bring uniformity in selection of items basket and preparation of weighting diagram, formula with a common methodology for preparation of IIP.

At the National level, National Statistical Office (NSO), Government of India prepares all India Index of Industrial Production. The Department of Economic and Statistical Affairs, Haryana is preparing Index of Industrial Production of Haryana since the year 1971-72. A number of State Directorates of Economics & Statistics are also engaged in compiling the State level Index of Industrial Production. The Govt. of India has constituted a Technical Advisory Committee (TAC) for an in-depth examination of various technical issues such as identification of representative items basket for individual State, development of corresponding weighting diagram with an appropriate linkage with the weighting diagram of all India's Index of Industrial Production etc. The TAC resolves technical issues relating to IIP and provides technical guidance in the matter of shifting the base year of current series to new series.

The recommendations of the Technical Advisory Committee on comparable Index of Industrial Production are examined by the NSO and the guidelines on compilation of State

level Index of Industrial Production are prepared. According to criteria laid down in the guidelines issued by NSO, the Department of Economic and Statistical Affairs, Haryana prepared the comparable State level Index of Industrial Production with base year 2011-12 for the year 2021-22.

METHODOLOGY

Scope and Coverage

The Index of Industrial Production (IIP) is prepared as per National Industrial Classification (NIC)-2008 for manufacturing and electricity sectors. The manufacturing sector covers the industries registered under section 2m (i) and 2m (ii) of the factory Act, 1948 and functioning within jurisdiction of Haryana State. The section 2m (i) refers to the units employing 10 or more workers with power and section 2m (ii) refers to the units employing 20 or more workers without power on any day of the preceding twelve months.

Base Year

To capture the changes in the industrial sector, the State series of IIP is revised from time to time by dropping obsolete items, including the new items in the items basket and also by shifting the base year to a more recent one. The current State series of IIP has been prepared on its base year 2011-12 under the overall guidance of National Statistical Office (NSO), Govt. of India, New Delhi.

The two stage methodology has been adopted for compiling an Index of Industrial Production. The first stage is to identify and select the items to be included in the items basket which could monitor and reflect the performance of the industrial sector. The second stage is to allocate the weights to the items included in the items basket.

The State level IIP with base year 2011-12 covers two major industrial sectors viz manufacturing (Registered) and electricity. Mining and Quarrying sector has been excluded due to its insignificant contribution in GSDP which was 0.04 percent in 2011-12 in the State. For selection of items weightage of each item in the base year has been determined. For this purpose total weight has been taken as 1000. The total weight of 1000 has been first distributed to registered manufacturing and electricity sectors on the basis of Gross Value Added of each sector for the base year 2011-12. For manufacturing sector, the weights of registered manufacturing sector have further been distributed to 2 digit industry groups (10-32) of NIC 2008. Previously, NSO (IS Wing), Kolkata used to explain the methodology, selection of item basket and preparation of weighting diagram and the States / UTs are to

prepare item basket and weighting diagram etc. but many States / UTs could not do it properly, therefore, NSO (IS Wing), Kolkata has selected the item basket and prepared weighting diagram and also prepared the list of factories (both selected and reserved) and provided to the States / UTs. The electricity sector has been taken as single item.

In all 178 items have been selected for the collection of production data for registered manufacturing sector of the base year 2011-12. The selected items have been assigned use based codes i.e. primary goods, capital goods, intermediate goods, infrastructure / construction goods, consumer durables and consumer non-durables.

The selected items have been classified under 3 digit industry groups which in turn have been classified under 2 digit industry group. List of selected items of manufacturing (registered) sector alongwith their respective item weight have been shown in table no 1.1.

Weighting Diagram

For this purpose, total weight has been taken as 1000. The total weight of 1000 has been first distributed to registered manufacturing and electricity sectors on the basis of Gross Value Added (GVA) of each sector for the year 2011-12. The weights of registered manufacturing sector have further been distributed to various 2 digit industry groups 10-32 of NIC-08. After that the 2 digit level weights have further been distributed to represent 3 digit groups. The weighting diagram prepared at item level is further assigned use based categories. Since electricity sector is a single item sector, no apportioning of weight has been done.

Table number 1.2 shows the distribution of weights for the year 2011-12 at sector level. Distribution of weight among selected groups at 2 & 3 digit level of manufacturing sector have been shown in table no. 1.3. Item level distribution of weights of manufacturing sector is available at table no. 1.4.

Selection of units

For selection of industrial units for collection of production data for manufacturing sector the unit wise ASI frame of items selected in the items basket for the year 2011-12 is used. Item-wise frame of Industrial units has been supplied by NSO (ISW), Kolkata. The month-wise data on generation of electricity taken from the website (www.cea.nic.in) and (npp.gov.in) NPP portal of the Central Electricity Authority is used. In this way, 544 industrial units have been selected for collection of data.

Source of data

For manufacturing sector, the Department of Economic & Statistical Affairs, Haryana has created necessary infrastructure for collection of data regularly from industrial units selected for the purpose. The data is collected directly from the selected industrial units by the District Statistical Officers of the department. Efforts are being made to promote online system for data collection. For electricity sector, the necessary data is obtained from the website of Central Electricity Authority www.cea.nic.in and NPP portal npp.gov.in.

Computation of Index Number

The change in production of selected units producing the item in the current period viz-a-viz their production in base year is relative change in the production of the item. The total production of an item in the current period is estimated using the relative change in production of the selected units.

The Index is computed by using the Laspeyre's Formula: -

$$I = \frac{\sum R_i W_i}{\sum W_i}$$

Where I = Index Number

R_i = Production relative of ith selected item

W_i = Weight assigned to ith item

∑ = Summation of all items within each group upto major group (2 digit) level.

The production relative of an item is defined as percentage growth of the production compared to the base year production.

$$R_i = \frac{P_{ci}}{P_{oi}} \times 100$$

Where R_i = Production relative of ith selected item.

P_{ci} = Current year production of ith item

P_{oi} = Base year production of ith item.

The production relatives are thus calculated at product (3 digit) level of NIC code and the ultimate indices are calculated up to major group (2 digit) level. Sectoral Indices and General Index are based on weighted Laspeyre's Index Number.

INDEX OF INDUSTRIAL PRODUCTION IN HARYANA

Use-Based Classification

The Use-Based Classification represents the changing pattern of customer's needs, based on the tastes and habits towards the purchase of industrial products. The industrial products have been clubbed into four major groups comprising of Basic Goods Industries, Capital Goods Industries, Intermediate Goods Industries and Consumer Goods Industries with a view to analyse the movement of growth rate of different groups of industries and their achievements within the frame of organized sector.

The Use-Based Classification represents the classification of the industrial products according to the product applications. Each industry group reflects the variations in the production of a particular class of industries based on product usage. The industries are classified into six groups viz., Primary Goods, Capital Goods, Intermediate Goods, Infrastructure/Construction Goods, Consumer Durables and Consumer Non-Durables Goods. Concepts and definitions for Use-Based Classification are given below.

(i) Primary Goods

Only such goods which are directly obtained from natural sources and used for further processing and consumption in manufacturing and power generating activities.

(ii) Capital Goods

Plants, machinery and goods used for further investments.

(iii) Infrastructure/Construction Goods

Finished goods which are primarily used in infrastructure industry or construction industry as an input. This category has been created to precisely items which could not be classified under consumer durables or intermediate goods

(iv) Intermediate Goods

Any goods/products produced as incomplete product or which goes as input in production for further finishing or forming a part of a product.

(v) Consumer Durables

Products directly used by consumers and having a longer durability (more than 2 to 3 years).

(vi) Consumer Non-Durables

Products that are directly used by consumers and cannot be preserved for long periods.

The share of each use-based industry group to the industry sector of the State and the number of industrial groups and items covered representing the use-based groups are as under: -
