PREFACE

Agriculture plays an important role in the economy of Haryana State. An income and consumption pattern of cultivators determines the growth of economy of the State to a great extent. The present Study on “Family Budget of Cultivators in Haryana” analyses the income from different sources, household expenditure and consumption pattern of 142 selected cultivator households.

The report has been prepared by Sh. Om Parkash Indora, Research Officer with the assistance of Sh. Rajesh Kumar & Sh. Sushil Kumar, Assistant Research Officers and Smt. Veena Rawat, Sr. Scale Stenographer under the overall guidance of Sh. Rajender Kumar, Additional Director.

Besides, the valuable assistance and active co-operation rendered by the selected cultivators who maintained the records of their day-to-day household income and expenditure is also acknowledged.

I hope that present issue will prove a useful tool for the planners, policy makers, administrators and research scholars in the State who are interested in the development of agricultural economy in the State.

CHAPTER –I

Introduction

1.0 General

The study on “Family Budget of Cultivators” in Haryana has been undertaken by selecting 142 cultivator households (one from each Block) in the State. The period of study is an agricultural year 2022-23 i.e. from 1st July 2022 to 30th June 2023. The study aims at analyzing sources of income and expenditure of the selected cultivators. An attempt has been made to find out the sources of income, pattern of domestic expenditure, dietary habits, standard of living and proportion of consumption of goods produced at farm and purchased from outside.

1.1 Objectives of the Study

The objectives of the study are as under:-

- i) To find out the extent of contribution by different sources of household income;
- ii) To study the pattern of their domestic expenditure;
- iii) To find out the proportion of consumption of goods produced at farm and of those procured from outside;
- iv) To examine the dietary habits of cultivators and their overall standard of living;
- v) To study the impact of the size of holdings on income and expenditure.

1.2 Methodology

For the main study i.e. "Economics of Farming in Haryana" 284 holdings were selected (two from each Block) in the State, keeping in view the size of holdings, willingness and capability of the cultivators in maintaining the day-to-day records of their income and domestic expenditure in the prescribed schedules, 142 out of 284 households, (one from each Block) were selected for conducting the study on "Family Budget of Cultivators in Haryana". The results extracted in this study are purely indicative in nature because of the small sample size.

The data is collected from selected cultivators under supervision of District Statistical Offices to ensure proper recording and accuracy of data. The selected cultivators were imparted necessary training and ₹ 1000/- per annum was given as honorarium for recording the data on income and expenditure of each household in the prescribed schedules. The supervision was also done by the officers /officials from time to time.

CHAPTER-II

Income of Cultivators

2.0 General

Introduction of improved technology in the field of agriculture has encouraged the cultivators in the State to adopt latest farm practices, thus enabling them to increase their farm yield per hectare as well as to increase income also. To increase their earnings, the cultivators have also diversified their economic activities into dairy farming, poultry and other small enterprises. For the present study, the income of the selected cultivators has been classified into following four broad categories as:-

- i) Farm cultivation;
- ii) Milk and milk products;
- iii) Interest on capital investment (It includes farm equipments & machinery, farm and residential buildings, milch animals and durable household goods);
- iv) Income from miscellaneous sources such as rent received from leased out land, remittances received from outside, imputed value of fuel, wood and dung cakes, sale of farm yard manure, income from sources other than farm cultivation etc.

2.1 Household Size

The size of the selected cultivator families ranged from 5 to 6 members. However, the average size of family was 5. This simple average does not provide a true picture of household size in terms of consumption as it gives equal weightage to the children and women. Therefore, the Atwater's scale of Adult Male Unit (Appendix –II) has been applied to work out the true family size of the cultivators. Children and women do not equalize male adult and are, therefore, to be converted to adult male units in order to ascertain their real capacity to earn and spend. This conversion is universally applied in National Sample Survey and other allied surveys conducted throughout the country. According to the "Atwater's Scale of Adult Male Unit of the Chinese Farm Economy by Buck", the average size of family worked out to 5. The selected households members and adult male units have also been classified according to size of holdings presented in table 2.1.

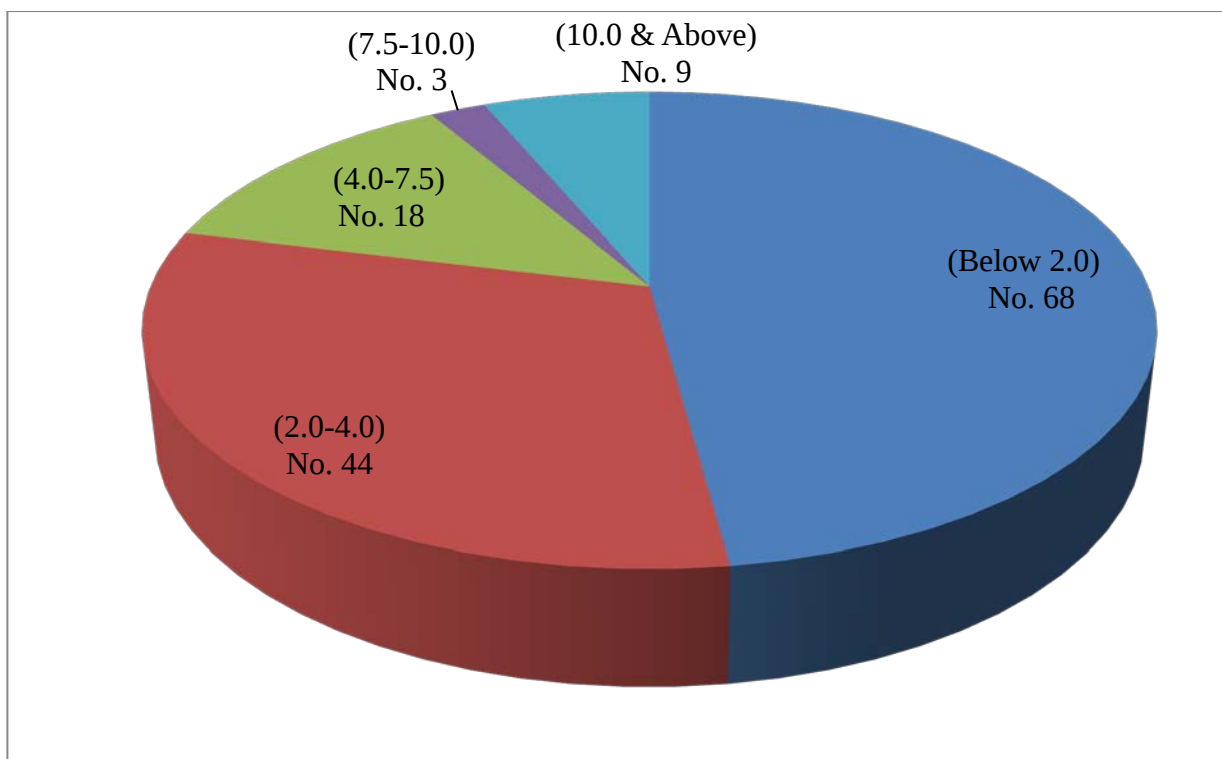

The table 2.1 shows that average number of members per household in 142 selected families was 5. The maximum average household size of 6 members was observed in the households belonging to the holding size group of 4.0-7.5, 7.5-10.0 & 10.0 and above hectares, whereas it was minimum of 5 members in the households pertaining to holding size group of

below 2.0 hectares and 2.0 - 4.0 hectares during the reporting year 2022-23.

Chart 2.1 Number of Households and Household Members according to size of holdings

2.3 Income of Cultivators according to size of holdings

It is observed that the size of holdings has a significant effect on the income of the cultivators. Generally, the average income of cultivators increases with the increase in the size of holdings because farmers with large holdings follow better agricultural practices latest technology and can afford a better package of inputs. The detail of income of cultivators according to size of holdings during the year 2022-23 is given in table 2.3.

3.6 Cost of Production of Milk

Since 55.22% of the total expenditure on food items was incurred on milk & milk products only. Hence, it has become essential to discuss in detail about the cost of production of milk. The cost of milk production per quintal, both for buffaloes and cows have been worked out by taking into account the various variable and fixed costs. Variable cost includes expenditure on

items such as fodder, concentrates, labour (family and hired) medical care etc. and fixed cost includes interest and depreciation on capital investment made on milch animals and cattle sheds etc. The cost per quintal and quantity of milk produced is given in table 3.6.
