 - (5) The rate of interest shall be the weighted average rate of interest calculated on the basis of the actual loan portfolio of the previous year after providing appropriate accounting adjustment for interest capitalised:

(6) The interest on loan shall be calculated on the normative average loan of the year by applying the weighted average rate of interest.

Provided that on account of additional capitalization during the year, interest on additional loan shall be calculated on pro-rata basis."

Annual Report on Technical Performance of Tiloth HEP

1.1 Overview

1.1.1 The petitioner in compliance of the relevant Regulations of UERC (Terms and Conditions for determination of Multi Year Tariff) Regulations, 2021 & UERC (Terms and Conditions for determination of Multi Year Tariff) Regulations, 2024 is providing information with regard to the operational performance related to technical parameters of Tiloth Hydro Power Station.

The operational parameters considered are:

- (a) Gross generation
- (b) AUX (Auxiliary consumption and Transformation losses)
- (c) Plant Availability factor (PAF)
- 1.1.2 The information provided in this chapter relates to operational performance:
 - Actual in FY 2022-23, 2023-24 and 2024-25 (30.09.2024)
 - Expected in FY 2024-25 & projected for FY 2025-26, FY 2026-27 & 2027-28.

1.2 Power Station Description

- 1.2.1 Tiloth Hydro Power Station with an installed capacity of 90 MW (3x30 MW) is a run of river with pondage scheme constructed on river Bhagirathi and situated in District Uttarkashi of Uttarakhand state. The scheme consists of a 39 m high concrete diversion dam. The river inflows are diverted through intake structure with sedimentation basin into a concrete lined head race tunnel of 6.5 km long and 6 m dia. The head race tunnel ends at the 69 m high and 11m dia. surge shaft, where the water is fed through 415 m long 3.8/2.5 m dia. underground penstocks which was trifurcated to feed all the three machines installed in the Power Station.
- 1.2.2 There are three generating units having vertical Francis turbine directly coupled with synchronous generator. The turbine output is 31.6 MW for a rated net head of 145 m. The generators are designed for a nominal output of 34 MVA with lagging power factor of 0.9 and class "F" insulation.

- 1.2.3 This Power Station was commissioned in the year 1984. Due to continuous operation of machines in silt laden water, efficiency of machines had substantially decreased, and availability of machines had been adversely affected in spite of regular & timely maintenance. The RMU of Power Station was awarded in year 2017. All three machines have been renovated as mentioned below:
 - RMU of Unit 1 started on 12/12/2018 completed on 17/04/2020.
- RMU of Unit 2 started on 27/02/2020 completed on 06/07/2021.
- RMU of Unit 3 started on 07/07/2021 completed on 08/09/2022.

1.3 Energy Generation

1.3.1 Actual/Expected/Projected energy generation from FY 2022-23 to FY 2027-28 is given in the table below:

Table 1: Actual, Expected & Projected Energy

SI. No.	Particulars	Norms	2022-23 (A)	2023-24 (A)	2024-25 (E)	2025-26 (P)	2026-27 (P)	2027-28 (P)

1.3.3 From the above table it is evident that gross generation has been more than the design energy of the plant in FY 2022-23 and lesser than design energy in FY 2023-24. From FY 2024-25 to FY 2027-28 the gross generation expected to be equal

to design energy.

"Ujjwal", Maharani Bagh, Debradun November 2024

1.3.4 The AUX (auxiliary consumption and transformation losses) has been higher than the normative in FY 2022-23 & 2023-24. Further, it is expected to be slightly higher than the norms also during the FY 2024-25. However, it is expected to remain within the norms for FY 2025-06 to 2027-28.

1.4 Plant Availability Factor

1.4.1 The recovery of the Annual Fixed Charges is dependent on the Plant Availability achieved by the plant. The principle for recovery of fixed charges on the basis of the availability achieved by the plant has been introduced by the Hon'ble Commission by its regulations UERC (Terms and Conditions of Multi Year tariff), 2021 & 2024. The petitioner has started computing this factor as per the provisions of the above regulations.

Table 2: Plant Availability Factor

1.4.3 PAFM: The Tiloth Power Station is very old HEP & requires more maintenance. Hence it has to be shut down for longer periods to carry out maintenance. The Petitioner requests the Hon'ble Commission to kindly consider and approve the NAPAF of MB-I HEP for the FY 2024-25, 2025-26, 2026-27 & 2027-28 as 79%.

Claims against calculation error in Tariff Order dated 28.03.2024-

The Petitioner filed review petition (39 of 2024) against the previous tariff order dated 28.03.2024. The Hon'ble Commission vide order dated 10.10.2024 allowed some relief to the petitioner on the issues at para 2.7(1), 2.7(2) & 2.7 (3) namely 'impact of net cash availability', 'calculation of non-tariff income' and 'double recovery of FD interest' respectively and observed as below-

- 2.7(1) Error on calculation of Net Cash Availability-
- ".... However, as multiple years are involved, the Petitioner is at liberty to submit a revised submission during the next tariff Petition i.e., Truing-up of FY 2023-24 based on which the Commission shall take an appropriate view w.r.t. valuation of Net Cash Availability."
 - 2.7(2) Incorrect calculation of Non-Tariff Income
- "....However, the same shall be revisited to the extent w.r.t. the issues of admitted at Para 2.7(1) and 2.7(3) in the instant order."
 - 2.7(3) Incorrect calculation of 'interest from FDR to be disallowed'
- ".... The Commission has gone through the submissions of the Petitioner. Upon analysis, it appears that some of the interest that the Petitioner in the past has voluntarily passed on as part of NTI may have been deducted twice and hence the issue requires detailed examination before any impact is allowed. The past tariff disallowances are required to be verified and authenticated with the previous calculations and therefore the Commission grants liberty to the Petitioner to claim the same along with the next MYT Petition.

In view of above relief granted by the Hon'ble Commission the petitioner has calculated claims for 10 LHPs as below-

1. Claim on account of calculation error in 'Net Cash availability': In table 3.53 of tariff order dated 28.03.2024 there is calculation error in calculation of 'Net Cash availability' regarding Non-tariff income computation for recovery for 10 LHPs which was acknowledged by Hon'ble UERC in review order dated 10.10.2024. UJVNL has calculated correct amount and calculated the difference resulted on account Interest from 'FD Interest to be disallowed' in the following table: -

ii. Out of aforesaid total FD interest, the detail of amount excluded/included by the petitioner under Non-Tariff income (NTI) in its claims were as below-

Thus, resulting in double recovery for FY 2016-17, 2017-18, FY 2021-22 and FY 2022-23 against non-tariff income. Therefore, this amount may kindly be refunded to the petitioner for 10 LHPs.
- iv. Further, as per the revised 'Net Cash Availability' calculation presented in point no 1 above, cash flow becomes positive for FY 2020-21, therefore, the claim would also arise for FY 2020-21 on account of double deduction in said calculation.
- v. Therefore, the following amount may kindly be refunded on account of Incorrect calculation of 'interest from FDR to be disallowed' as below-
