# India's Case Fatality Rate (CFR) further improves and drops to 2.25%

## Total Recoveries continue on an upward trend, cross 9.5 lakh today

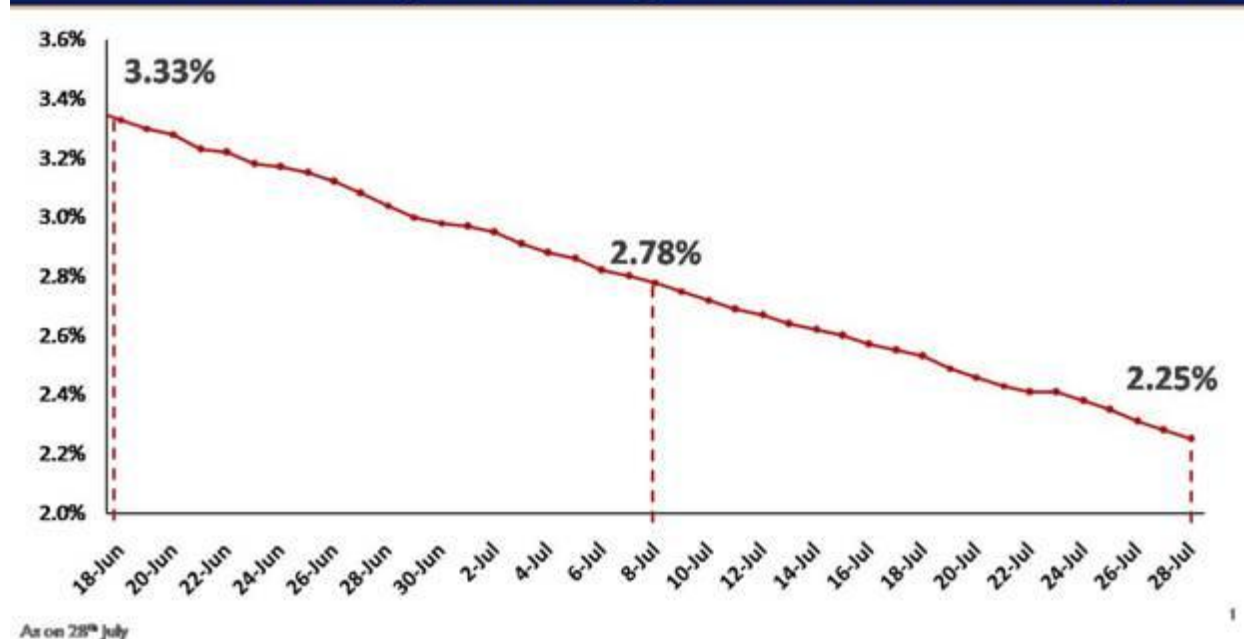

## More than 35,000 Recoveries registered yesterday

Posted On: 28 JUL 2020 3:01PM by PIB Delhi

India's Case Fatality Rate (CFR) is progressively falling and currently, it is 2.25%. India continues its march as a country with one of the lowest fatality rates in the world. This achievement is a result of effective implementation of containment strategy combined with house-to-house surveys, aggressive testing and standardized clinical management protocols based on holistic Standard of Care approach which ensured that hospitals were left unburdened with supervised home isolation for the asymptomatic patients.

Under the guidance of Central government, State/UT governments have focused on reducing the fatalities by effectively managing the severe cases and prioritising care of the high-risk population using field health care workers leading to decrease in the CFR across the country. The CFR has reduced from around 3.33% in mid-June to 2.25% today.

**Effective Clinical Management Leading to Decrease in Case Fatality Rate**

The ramped up three-tier hospital infrastructure along with prompt and seamless patient management has helped consistent increase in the recoveries. For the fifth day in a row, India has seen more than 30,000 recoveries per day. The focused efforts of Centre and State/UT governments on early detection and isolation along with handholding of States/UTs by the expert teams of AIIMS, New Delhi for efficient clinical management of hospitalized cases and periodic visits of central teams, have borne results with continuously improving Recovery Rate.

### Rising Recovery Rate

The Recovery Rate has seen a sharp increase from around 53% in mid-June to more than 64% as on today. With 35,176 patients discharged in the last 24 hours, the total recoveries stand at 9,52,743.

With improving daily recovery number, the gap between the recovered cases & the active cases is also persistently increasing. Presently, it is 4,55,755. This means the actual active case load is presently 4,96,988 and all are under medical supervision.
