The new phase of universalization of COVID-19 vaccination has commenced from 21st June, 2021. The Union Government is committed to accelerating the pace and expanding the scope of COVID-19 vaccination throughout the country.

Out of the people infected since the beginning of the pandemic, **3,05,79,106 people have already recovered from COVID-19** and **35,968 patients** have recovered in the last 24 hours. This constitutes an overall recovery rate of **97.35%**.

India has reported 39,361 daily new cases in the last 24 hours.

Less than 50,000 Daily New Cases have been reported since twenty-nine continuous days. This is a result of sustained and collaborative efforts by the Centre and the States/UTs.

## 39k Daily New Cases reported in last 24 hrs

India's Active Caseload today stands at **4,11,189** and active cases now constitute **1.31%** of the country's total Positive Cases.

## India's Active cases Trajectory

With substantially ramped up testing capacity across the country, a total of 11,54,444 tests were conducted in the last 24 hours in the country. Cumulatively, India has conducted over **45.74 crore (45,74,44,011)** tests so far.

While on one side testing capacity has been enhanced across the country, **Weekly Positivity Rate is currently at 2.31%** and the **Daily Positivity rate stands at 3.41% today**. Daily Positivity rate has remained below 5% for 49 consecutive days now.

## COVID-19 Vaccination Update

**More than 45.37 Crore vaccine doses provided to States/UTs**

**More than 3.09 Crore balance and unutilized doses still available with States/UTs and private hospitals to be administered**

**in** As part of the nationwide vaccination drive, Government of India has been supporting the States and UTs by providing them COVID Vaccines free of cost. In the new phase of the universalization of the COVID19 vaccination drive, the Union Government will procure and supply (free of cost) 75% of the vaccines being produced by the vaccine manufacturers in the country to States and UTs.

VACCINE DOSES	(As on 26 July 2021)
SUPPLIED	<b>45,37,70,580</b>
IN PIPELINE	<b>59,39,010</b>
CONSUMPTION	<b>42,28,59,270</b>
BALANCE AVAILABLE	<b>3,09,11,310</b>

More than **45.37 crore (45,37,70,580)** vaccine doses have been provided to States/UTs so far, through all sources and a further **59,39,010** doses are in the pipeline.

Of this, the total consumption including wastages is **42,28,59,270** doses (as per data available at 8 AM today).

More than **3.09 Cr (3,09,11,310)** balance and unutilized COVID Vaccine doses are still available with the States/UTs and private hospitals to be administered.

 **A COVID positive mother should continue to breastfeed the baby but is advised to keep the baby at a distance of 6 feet from her when she is not breastfeeding - Dr Manju Puri, Head, Department, Obstetrics and Gynaecology, Lady Hardinge Medical College, New Delhi**

 **“Vaccines help the body develop immunity against a specific pathogen, it does not affect any other body tissue”**

**in**

**We strongly recommend an overall health check-up post-Covid recovery to ensure that the mother and the foetus are doing fine - Dr. Manju Puri**

Dr Manju Puri, Head, Department, Obstetrics and Gynaecology, Lady Hardinge Medical College, New Delhi talks about the recent decision to administer Covid-19 vaccination during pregnancy, and what precautions women should take to protect herself and her child from catching COVID-19.

It has now been approved that woman can take COVID-19 vaccines even during pregnancy. How will it help?

During the second wave, many women contracted COVID-19 during pregnancy compared to the first wave. COVID if severe can lead to serious complications during pregnancy, especially during the last trimester as the uterus is enlarged and presses on the diaphragm, compromising a woman's ability to cope with a fall in oxygen saturation. This may lead to a sudden fall in blood oxygen saturation and risk the lives of both the mother and the child. Vaccines will help prevent severe disease in pregnant women.

Also, vaccinating a mother is likely to give some degree of protection to the new-born as the antibodies developed in the mother's body post-vaccination will pass on to the developing foetus through her blood. In the case of lactating mothers, an infant gets these antibodies through the mother's breast milk.

### **Scientists join hands targeting to synthesize compounds to inhibit maturation & propagation of COVID 19 virus**

Scientists from India, Russia, Brazil, and South Africa will work together to repurpose, validate and synthesise lead compounds against main protease and RNA replicas, the enzyme that catalyses the replication of RNA, of SARS-CoV-2. The approach which could inhibit both maturation and propagation of viruses during the infection in the host cells can help produce new COVID-19 medicines with improved production methods.

**f** The area of multistage targeted inhibitors of SARS-CoV-2 has emerged few months back after WHO announced Covid-19 as global emergency. The multistage process involves viral genome replication, transcription and maturation are the multistage processes, which are interlinked in the viral machinery and promote viral propagation. They are regulated by the enzymes protease and RNA replicase. **🐦** Inhibiting these effects would be crucial to complete the dream of millions of people on this earth to develop/repurpose a drug molecule against COVID-19.
