Update on CoWIN

CoWIN launches new API: KYC-VS: Know Your Customer's/Client's Vaccination Status

KYC-VS will enable entities to check an individual's status of vaccination through CoWIN

KYC-VS is consent-based, privacy preserving and can be seamlessly integrated with any system

As the socio-economic activities are being gradually revived while maintaining everyone's safety, there is a need for a way to digitally convey the status of individuals' vaccination to entities with whom they may be engaging with for any or all reasons, as employees, passengers, residents etc.

Therefore, there is a need to enable an Aadhaar like authentication service for the status of vaccination through Co-WIN. To take care of these cases and others that may come up, Co-WIN has developed a new API called 'Know Your Customer's/Client's Vaccination Status' or KYC-VS. To use this API, an individual needs to enter his/her mobile number and name. Thereafter, they will get an OTP which they have to enter. In return, Co-WIN will send a response to the verifying entity on the individual's status of vaccination, which will be as follows –

0 - Person is not vaccinated

1 - Person is partially vaccinated

2 - Person is fully vaccinated

This response will be digitally signed and can be shared instantly with the verifying entity. A real-life example could be when at the time of booking a railway ticket, an individual will input the necessary details for buying the ticket and if required, the concerned entity will also get the vaccination status in the same transaction, with the due consent of the individual.
