Foreword

Directorate of Economics & Statistics (DES) has the instinct to continuously improve on its past publication and come out with the statistics that will be more precise & worthy for various policy makers. Various authorities and research institution often require data on economic activities at the district level for planning and policy purpose. In this context, I am pleased to note that the following the recommendation of Sub-National Account Committee (SNAC), Directorate of Economics & Statistics (DES) has come out with revised, meaningful, formidable and valuable publication “Estimates of District Domestic product of Uttarakhand: 2011-12 to 2021-22” with base year 2011-12.

Income of the District is considered one of the most important indicator/barometers to measure the economic growth/development of a district vis-à-vis others. Preparation of District Income estimates has recently gained importance, since it is one of three indicators to construct a composite Human Development Index (HDI) of the state. The present publication covers the district-wise gross and net income estimates along with per capita income both at current and constant prices.

Special thanks are extended to Shri Sushil Kumar, Director, DES for providing his valuable guidance and direction to small units of DES in formulation this publication to the DES. I would also like to place on record my deep and sincere appreciation for the efforts of officers and staff of the DES engaged in preparation of this document.

I hope this publication will immensely help the policy makers, development administrators, planners and academic & research community.

Date: 28-02-2023

(R. Meenakshi Sundram)

Secretary, (Planning)
Government of Uttarakhand

Preface

The 73rd and 74th amendments of the Indian Constitution, which brought local level governance into prominence, in turn focused attention on regional problems and planning. Directorate of Economics & Statistics annually release the state income estimates. However, in the state domestic product estimates attention had been confined to the state as a whole and nothing had mentioned about the regional differences within the state. With the growing importance of decentralized planning, the need to develop relevant information on indicators of development as district- level has been increasingly felt. For proper planning for regional development, it is essential to have a prior knowledge of the level of performance on regional basis. The estimates of district income or the net district product can be looked upon as an indicator to measure economic development and welfare of a region. These estimates will definitely throw some light on the inter-district variation in economic development.

The current publication of DDP comprises of estimates for year 2011-12 to 2021-22 on base year 2011-12. Government of India vide notification number 219 dated 27 June 2018 formulated the Sub National Account Committee under the Chairmanship of Prof. Ravindra H. Dholakia which among other things, gave its recommendation regarding formulation of DDP accounts in order to make them comparable among the districts. Following its recommendation, the State Income Unit of DES have come out with the revised District Domestic Product Estimates with Base Year 2011-12.

I would like to put on records my warm accolades for the strenuous & extensive efforts made by the small team of DES officials who made this publication available for appraisal, comment and suggestion by the enlighten readers, researcher, policy makers, planners to further improve our future publication.

I heartily and warmly thank, Shri R. Meenakshi Sundram Secretary Planning, for giving us opportunity to work in this field and recognizing our contribution.

Director DES
Uttarakhand, Dehradun

Acknowledgement

For formulation of realistic and effective district level plans, need of having economic activity-wise estimation of the District Domestic Production (DDP) has always been realized from time to time. As it is well known that national level data system is very rigorous and well designed, with matching state data but very little information is available at the district level. Thus, there is a need to develop district level indicators not only to make district level estimates more relevant and precise but also to improve our understanding of the various development processes. In this context, the attempt by the Directorate of Economics and Statistics to come out with revised District Domestic Product estimates from 2011-12 to 2021-22 with the new base year 2011-12 is really commendable and noteworthy.

The Directorate of Economics & Statistics (DES), Uttarakhand has come out with its revised DDP estimates. Economic Activity wise estimates of the District give the broad idea of economic well-being of the district. Due to open economy & paucity of data at the district level, direct estimation of District Domestic Product is quite impossible; certain indicators have to be devised in order to have estimates closer to reality. Following SNAC recommendation, DES efforts in this publication are really commendable & noteworthy.

This publication would not have been possible without cooperation & guidance from the Central Statistics Office (CSO) and data-furnished by the concerned departments of the government of Uttarakhand. Help and support from the officials of these organisations is gratefully acknowledged.

I would like to congratulate the entire team of DES for putting up so much effort, which made this report a reality and publication of great value to the users.

CHAPTER**DISTRICT DOMESTIC PRODUCT**
2011-12 TO 2021-22(PE)**INTRODUCTION** |

The information/statistics/indicators on economic activities at levels lower than state are often required by the central and state authorities as well as research institutions for planning and policy purposes to know the development as well as levels of living of the people etc. at that level. Districts have well been recognized as the areas for such requirements. Estimates of income of a district, i.e., District Domestic Product (DDP) is thought to be one of the most important indicator/barometers to measure the economic growth/development of a district, vis-à-vis, other districts and the estimates of per capita income in the district is considered to be the indicator / barometer to measure the level/standard of living of the inhabitants of the district. Preparation of DDP estimates has gained added importance, as it is one of the three indicators to construct a composite Human Development Index (HDI) for inclusion in the Human Development Report being prepared by some of the states of India. Other two indicators forming part of HDI are life expectancy and educational attainment.

The National Statistical Commission (NSC) recognized the need for the estimates of DDP in the context of calculating district level human development index. The NSC noted that (a) the DDP estimates, wherever currently available, cover mostly major agricultural crops only, or at best commodity producing sectors covering agriculture and industry because of problems of data availability at the district level; (b) available DDP estimates are calculated by income originating (by sector of origin) method; (c) conceptually, for HDI, what are needed are DDP estimates by the income accruing method in order to reflect district-level living standards; and (d) currently available data do not permit calculation of DDP by the income accruing method. It would be desirable to develop some appropriate indicators of the living standards at the village / block / district level. NSC has suggested that the techniques of small area statistics may be used to estimate these indicators on the basis of State/regional level statistics capabilities.

Recently, the Sub-National accounts committee apart from other issued detailed District Domestic Product formulation guidelines so as to formulate uniformity in its formation. Present DDP exercise takes into consideration most of the recommendations of the committee and tries to estimate the DDP of 13 districts of Uttarakhand. The broader

utilities of the DDP estimates are as follows:

1. To know the growth of the economy
2. To work out per capita income
3. For the allocation of funds
4. To study structural changes in economy
5. For fixing the plan targets
6. To study the Inter-District comparison

CONCEPTS AND DEFINITIONS

The estimates of District Income can conceptually be prepared by adopting two approaches, namely, income originating and income accruing. In the Income originating approach, the measurement corresponds to income originating to the factors of production physically located within the geographical boundaries of the district and represents net value of goods and services produced within the district. It is the income originating as a result of the utilisation of the physical assets and the labour force of the region, even though some of the income might flow to residents outside the region. The income accruing approach relates to the income accruing to the normal residents of a district. In other words, it is the income received by the residents of a region, even though some of it might have originated outside the region. Since these measures the income that becomes available to the residents of a district, it provides a better measure of the welfare of the residents of the region. Therefore, for a realistic measurement of income received, account needs to be taken of net inflow/outflow of income between districts. But in an open economy like that of a district in this country, it is very doubtful whether such an estimate can be prepared unless special effort is made for the collection of this data.

Presently, DDP estimates are compiled by following the income originating approach. For estimating the District Domestic Product, the economy is divided into following economic activities: -

1- PRIMARY SECTOR

- (i) Crops (including horticulture)
- (ii) Livestock
- (iii) Forestry and Logging
- (iv) Fishing
- (v) Mining and Quarrying

2- SECONDARY SECTOR

- (vi) Manufacturing
- (vii) Construction
- (viii) Electricity, Gas and Water Supply

3- TERTIARY SECTOR

- (ix) Transport, Storage Communication & Services Related to Broadcasting
 - (a) Railway
 - (b) Transport by other means other than railways
 - (c) Storage
 - (d) Communication and Services Related to Broadcasting
- (x) Trade, Repair, Hotels and Restaurants
- (xi) Financial Services
- (xii) Real Estate, Ownership of Dwelling and Professional Services
- (xiii) Public Administration
- (xiv) Other Services

In the commodity producing sectors like agriculture, forestry, fishing, mining and manufacturing (registered), the estimates of DDP are prepared using the production approach i.e., gross value added = value of output minus value of inputs used in the process of production. In the services sectors like trade, transport, hotel and restaurants etc., the estimates for the public sector are prepared by income approach, i.e., gross domestic income = compensation of employees plus gross operating surplus. For the unorganised sectors like manufacturing unregistered and the unorganised segments of the remaining sectors of the economy i.e. unorganised trade, unorganised hotels and restaurant, unorganised road transport, unrecognised educational institutions, unorganised medical and health services, etc. the estimates of GVA are compiled as a product of work force and gross value added (GVA) per worker. While the GVA per worker is derived from the follow-up surveys of economic censuses carried out by the NSSO, the work force is estimated from the quinquennial surveys of employment and unemployment of the NSSO and the population censuses.

Supra regional sectors: There are certain activities which are supra regional in nature i.e. they cut across the boundaries of the states/districts, for example, the activities of railways, communication, banking and insurance and central government

administration. The estimates for these supra regional activities are compiled for the economy as a whole and allocated to the states and further to the districts on the basis of relevant indicators.

The estimates of district domestic product are prepared by compiling the actual estimates for the agriculture, forestry, fishing, and mining and the public sector component of all other sectors, from the district level available data; and by allocating the state level estimates to the districts on the basis of work-force data for other sectors. The agencies/personnel through which district level data is mainly collected are District Statistical Office (DSO), Directorate of Animal Husbandry, Directorate of Fisheries Department, etc. It has been observed that the availability of district-wise basic data required for estimation of income at the district level is still not satisfactory. The data in respect of commodity producing sectors viz. Primary Sectors are also partly available & not fully available but in respect of remaining sectors, it is very scanty. As such, wherever district wise basic data are available, the same is utilised to compute the direct district income estimates following the state level methodology. In case of non-commodity producing sectors, where district-wise basic data are not available, the state level estimates are allocated to the districts on the basis of suitable district-wise indicators. Further, in some of the commodity producing sectors, though district-wise production data are available, the corresponding prices are not available. In such cases, district-wise production and state average prices are utilised for preparation of District Income estimates. Similarly, wherever, certain ratios/norms, yield rates, etc. are used for the State estimates and which are normally not available at the district level, the State level ratios/yield rates, etc. are utilised for district income estimates also.

CURRENT AND CONSTANT PRICE ESTIMATES

An analyst may be interested to analyse the District Income or DDP estimates in two way:

1. The increase in value terms i.e., the estimates of current output at current prices
2. The actual increase in output i.e., the estimates of current output at constant prices (base year price)

Whereas, the first estimate helps in analysing the overall impact of increase in price and increase in the quantity, the second estimate is used to analyse the increase in quantity terms, when the price effects are eliminated. Following the above approaches two types of estimates of DDP or District Income Estimates are prepared – estimates at current and constant prices.

ESTIMATING THE GDDP/NDDP & PCI

Routinely, the GSDP/ NSDP estimation procedure is performed in five steps:

1. Step 1: Calculation of GVA
2. Step 2: Calculation of FISIM
3. Step 3: Calculation of GDDP; Adjusting GVA for FISIM
4. Step 4: Calculation of CFC
5. Step 5: Calculation of NDDP; Adjusting GDDP for CFC
6. Step 6: Calculation of PCI

It, therefore, seems necessary to understand the meaning of the terms that are used above, such as, GVA, FISIM, GDDP, CFC, NDDP & PCI.

GROSS VALUE ADDED (GVA)

GVA of any economic activity is derived by deducting value of inputs from the value of output.

Mathematically, $GVA = \text{Value of Outputs} - \text{Value of Input} \text{----- (1)}$

FINANCIAL INTERMEDIATION SERVICES INDIRECTLY MEASURED (FISIM)

There are various sectors in which banking and financial activities are involved but these are difficult to be considered while calculating GVA for those sectors of economy, such as agriculture, forestry, fishing, mining & quarrying, manufacturing, construction, electricity and gas, transport by other means, storage, trade, hotels and restaurants, business services and other services. Since banking and financing are supra-regional activities, it is difficult to calculate their impact (in terms of FISIM) on the economy of any state. Thus, these estimates (of FISIM) are calculated at the CSO level and supplied to different states. FISIM supplied to the states are further distributed to different district estimates in proportion to the respective sectoral DDP.

FISIM is defined as “an imputed income equivalent to interest and dividend receipt of banking and financial enterprises net of interest paid to depositors”.

GROSS DISTRICT DOMESTIC PRODUCT (GDDP)

The gross value added is worked out first by one or more of the approaches as indicated above and then an intermediate input (FISIM) is deducted to get GDDP.

Mathematically, The GDDP of any sector is calculated as

$$\text{GDDP (unadjusted)} = \text{GVA; sum over sectors} \text{-----} (2)$$

$$\text{GDDP (Adjusted)} = (\text{GVA} - \text{FISIM}); \text{sum over sectors} \text{-----} (3)$$

CONSUMPTION OF FIXED CAPITAL (CFC)

The fixed assets, such as land, building, plant & machinery etc. are used in the production process, and hence play a vital role in building up the GDDP. However, two things are possible: either the fixed capital would depreciate or it could become obsolete. Thus, it is necessary to adjust the GDDP for the 'Consumption of Fixed Capital (CFC)' to reach the estimates of NDDP.

CFC is defined as the current replacement cost of the fixed assets used up (consumed) during a financial year as a result of normal wear and tear, and foreseen obsolescence.

CFC is specifically defined as the part of the gross product required to replace the fixed capital used in the production process. The industry-wise estimates of CFC are provided by CSO

NET DISTRICT DOMESTIC PRODUCT (NDDP)

The estimates of NDDP are arrived at by deducting the estimates of Consumption of Fixed Capital (CFC) of the concerned sector from the estimates of GDDP of that sector, and then aggregated to get the NDDP.

$$\text{Mathematically, NDDP} = (\text{GDDP} - \text{CFC}); \text{sum over sectors} \text{-----} (4)$$

PER CAPITA INCOME (PCI)

The estimates of aggregated NDDP (at current and constant prices) so arrived at is divided by mid-year (financial) population to get Per Capita Income (PCI) i.e.,

$$\text{PCI} = \text{NSDP} / \text{Mid-year Population} \text{-----} (5)$$

Note that it can be calculated using GDDP figures as well.

SUPRA-REGIONAL SECTOR

The activities of Railways, Communication, Banking & Insurance and Public Administration (Central Government) are not confined to one state. It is difficult at state-level to prepare estimates pertaining to the activities of these sectors within the state. The CSO therefore prepares the estimates at national level by allocating them to various states

on the basis of appropriate physical indicators, e.g. length of railway track, number of telephone/mobile connections, number of bank branches, strength of central govt. staff etc. Similar indicators have been used to further allocate the State Level GVA to districts.

THREE PRINCIPAL FIGURES

Most of the users of SDP or State Income get puzzled with set of estimates floated before them, and find it difficult to select the appropriate one. It is for their ease to concentrate on following three estimates:

- (a) GDDP at current prices (Perceived as Size of the Economy)
- (b) Growth of GDDP at constant prices (Perceived as Growth Rate)
- (c) Per Capita NDDP at current prices (Perceived as Per Capita Income)

KEY FINDINGS

District Domestic Product is estimated at current as well as constant prices. Following the recommendation of Sub National Account Committee, attempt has been made to estimate the district product from the base year 2011-12 to the year 2021-22. As the data for the year 2020-21 & 2021-22 are yet to be finalised so the estimates of these year are likely to be revised in further District Domestic Product publication. As stated earlier, there are certain economic activities whose data is available at disaggregated level, but for certain economic activities, district level indicators are used to allocate the State level GVA among the district. The detail methodology adopted in the formulation of district estimates is given the appendix & also mentioned briefly in the next chapter. This Chapter discusses the main findings of the District Domestic Product Estimation under the following heads:

- Size of the District Economy.
- Share of the Primary, Secondary & Tertiary Sector in the District Economy.
- Per Capita Income of the District.
- Growth Rate of the District Economy.
- District wise Ranking in terms of Primary Sector, Secondary Sector, Industry Sector & Tertiary Sector.
- Comparison of the District Economy simultaneously with its base year in above mentioned economic parameters.
- Comparison of the Division Economy simultaneously in above mentioned economic parameters.

A. SIZE OF ECONOMY

The estimation of all goods & services produced in the district economy without duplication gives the size of the economy. Ascertaining the size of the economy in district parlance is not as direct as in case of state economy. District wise comparison of the size of the economy in year 2021-22 is shown in the following graph 1. Haridwar's size of the economy is Rs 85,636 crores, followed by district US Nagar which is Rs 57,579 crores. The third largest economy in Uttarakhand is Dehradun whose size of the Economy is Rs 50,687 crores. The smallest size of the economy is of District Rudraprayag i.e. Rs 2,839 crores. The growth of the size of the economy, separately of Garhwal & Kumaon division in last three years & in comparison with base year 2011-12 is shown in Graph 2nd, 3rd & 4th. Division wise comparison of the size of the economy is shown in Graph 5th for last five years i.e. from 2017-18 to 2021-22.

B. SHARE OF DIFFERENT SECTORS IN DISTRICT ECONOMY

The three prominent sectors of the economy i.e. Primary, Secondary & Tertiary sectors reflect the trends of the economy in past years. District wise share of the three prominent sector of the economy is reflected in the following Graphs. For base year 2011-12, the share of Garhwal Mandal & Kumaon Mandal in Primary Sector was around 11.71% & 17.32% respectively, in case of Secondary Sector the share was 56.53% & 45.06% respectively & in case of Tertiary Sector the share was 31.76% & 37.64% respectively. After six years, i.e. for 2016-17, the share of Tertiary Sector increased & of Primary & Secondary Sector decreased. In figure terms, for year 2016-17, the share of Garhwal Mandal & Kumaon Mandal in Primary Sector was around 8.77% & 12.87% respectively, in case of Secondary Sector the share was 54.87% & 43.27% respectively & in case of Tertiary Sector the share was 36.36% & 43.86% respectively. . After five years, i.e. for 2021-22, the share of Primary & Tertiary Sector increased & of Secondary Sector further declines. In figure terms, for year 2021-22, the share of Garhwal Mandal & Kumaon Mandal in Primary Sector is estimated around 9.85% & 13.65% respectively, in case of Secondary Sector the share is estimated 52.07% & 40.89% respectively & in case of Tertiary Sector the share is estimated 38.08% & 45.46% respectively. Division wise & District wise share of the three prominent sectors of the economy for above mentioned three years is shown in the following Graphs from 6 to 14. The details tabulation is provided in the Appendix section in the last.

C. PER CAPITA INCOME OF THE DISTRICT

District wise per capita income gives an idea about the standard of living of the individual in the district. The highest per capita income for year 2021-22 is estimated for district Haridwar i.e. Rs 3,62,688. It is followed by district Udham Singh Nagar with Rs. 2,69,070. The third highest per capita income is estimated for district Dehradun i.e. Rs 2,35,707. The lowest is for district Tehri, Rudraprayag & Bageshwar. Division wise & District wise per capita income compared to the base year is shown in Graph 15 & 16 respectively.

District Wise Per Capita Income (In Rs)

In Comparison with Base Year

District of Uttarakhand
Graph 15

D. GROWTH RATE OF DISTRICT ECONOMY

Growth Rate of the economy is calculated at constant prices. For year 2021-22, growth rate is maximum for the district Chamoli, followed by District Pithoragarh & Champawat. The reason of high growth rate in district Chamoli is the higher growth in Financial Service Sector. In district Pithoragarh & Champawat, higher growth is observed in Trade, Repair, Hotel & Restaurant services. This activity had observed huge negative growth in previous year. Detail year wise growth rate & indicator used for allocation of GVA is given in the Appendix. Year wise growth rate of Garhwal Mandal & Kumaon Mandal is given in the following table.

Division	2012-13	2013-14	2014-15	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21*	2021-22*
Garhwal Mandal	7.57	8.40	4.45	8.35	10.36	8.98	2.65	1.40	-6.39	9.68
Kumaon Mandal	6.32	10.82	6.65	9.19	8.05	5.27	4.14	1.52	-4.68	8.70

E. DISTRICT WISE RANKING IN DIFFERENT SECTORS

The structure of economy varies from district to district. The prominent sector of the economy i.e. primary, secondary & tertiary sector subsumes the whole economy. In following graph an attempt has been made to show the district & division wise ranking among the district in above three sectors plus the industry sector. Industry sector includes Secondary sector plus the economic activity held in Mining sector, which is part of Primary Sector. The following graph from 18 to 25 shows the ranking among the district & division in above mentioned activity.

F. DISTRICT WISE SHARE OF DIFFERENT ECONOMIC ACTIVITY

The gross value added of the district comprises of the GVA of different economic activity. The following graph from 26 to 40 shows the share of different economic activity in the GVA of the district & division. Economic activity taken together are as follows:- Crops; Livestock; Forestry; Fishing; Mining; Manufacturing(manf.); Electricity, gas, water supply & other remedial services (Egwo); Construction (constr.); Railways; Transport by means other than Railways(Tran. e_r); Storage; Communication & Broadcasting (c & b); Trade, Repair & Hotel & Restaurant; Financial Services; Real Estate, Ownership of Dwelling & other professional services (REOD&OPS); Public Administration (Pub.Adm.); Other Services.

Economic Activities Share in GVA of District Garhwal Mandal

Year 2021-22

Economic Activities Share in GVA of District Kumaon Mandal

Year 2021-22

METHODOLOGY

AGRICULTURE (CROP SECTOR)

Value of Output

As in the case of state level estimates, the estimates at district level are compiled by 'production approach'. But district level data on production and prices are generally not available uniformly for all the crops. Hence, for estimation purpose, crops are classified in different categories as follows: -

District wise Area, Production & Prices Available: - Crops for which reliable district-wise data on area, production and prices are available: In such cases district-wise value of output for each crop may be compiled by using district-wise production and prices. The wholesale prices of primary markets during peak marketing periods are used in this context.

District wise Production Available: - Crops for which though district-wise production is available, corresponding district wise prices are not available: For this category of crops, district-wise value of output may be computed by using district-wise production and neighbouring district prices, if available. In case neighbouring district prices are also not available, regional prices may be used. If these are also not available, the state prices may be utilised.

District wise both Production & Prices Unavailable: - Crops for which district-wise data, both on production and prices, are not available but area figures are available: In such cases, district-wise value of output of these crops may be compiled by allocating the state level value of output on the basis of district-wise area under the crops.

District wise Area Available: - Miscellaneous and unspecified crops for which production and price data are not available even at the State level but district-wise area is available: In such cases, the value of output may be worked out by multiplying the district-wise area by the state level value per hectare of similar crops.

Procured Products: - For the quantity of food grains, which are procured on Government account, the prices are different from the prevailing market rates. As such, adjustments are made in the output of such agricultural products by evaluating separately the quantity procured and sold in the primary market by their respective state ratios.

Value of Inputs

As in the state level estimates, to arrive at the district-wise Gross Value Added (GVA) from agriculture sector, value of various input items are to be first deducted from the Gross Value

of Output of this sector and then the gross product from operation of Government Irrigation System is added to that. The deductible inputs are the same as used at the State level viz. i) Seed, ii) Chemical Fertilisers/ manure iii) feed of livestock (male adult Buffalo and Cattle), iv) Pesticides v) Diesel oil vii) electricity, vi) Irrigation charges, vii) market charges for crops, viii) Repairs and Maintenance for crop sector (ix) FISIM.

To work out the value of these input items at the district level, the state level estimates arrived at independently under the Current series of state income estimates are distributed to various districts on the basis of certain proportions as illustrated below: -

Seed: The district-wise value of seed is distributed according to district wise gross cropped area in district.

Chemical Fertilisers /Organic Manure: State level value is distributed to districts in proportion to the district-wise estimates of value of output of dung manure as estimated in the Livestock sector.

Feed of livestock for crop sector: District-wise value of feed of livestock for crop sector is estimated by State level value of feed for crop sector distributed according to district wise population of Adult cattle male and Adult buffalo male.

Pesticides and Insecticides: The State level value is distributed to the districts in proportion to district wise gross cropped area.

Diesel Oil Consumption: State level value of consumption of diesel oil by tractors and oil engines is distributed to districts according district wise gross cropped area.

Electricity: The state level value is distributed on the basis of district-wise number of electric tube-wells/lift irrigation points and energised pump-sets.

Irrigation Charges: The district-wise irrigation charges are used for this purpose.

Market Charges: The state level norm (3.22 % of GVO) in respect of Crop sectors is used for district income estimates also.

Repair and Maintenance of fixed assets: - District-wise data on fixed assets as available from All India Debt and Investment Survey (AIDIS) 70th survey round is used.

FISIM: State level value of FISIM is distributed on the basis of total value of output of the district.

After evaluation of district wise input values, it should be adjusted using the ratio of state Input value / sum of district Input value.

where, $d_i = i^{\text{th}}$ district estimate

S = State Estimate

D_i = Adjusted i^{th} district estimate

$\sum d_i$ = Sum of all district estimate

Gross Product from Operation of Government Irrigation System: This is added to the gross value of output of Agriculture after deducting the value of inputs. The state level value of contribution by Government Irrigation system is distributed among the districts in proportion to the district-wise area irrigated by Government canals.

LIVESTOCK

Value of Output

Similar procedure as adopted at the state level is followed at the district level also. District-wise estimates of the number of different categories of animals and poultry is worked out from the results of the latest two livestock census using compound growth rates and utilised along with relevant yield rates to obtain the estimates of production of various livestock products and by-products and poultry meat.

The results of Integrated Sample Survey (ISS) conducted by State Animal Husbandry Department provide State/District level data on production of milk, meat, wool and egg is used. It also provides estimates of the category wise number of slaughtered animals. Wherever, ISS results are available only for the State, the estimates for districts are obtained by allocating the same to the districts on the basis of relevant livestock population. To estimate district-wise production of all other items (i.e., other than milk, meat, egg and wool), state level yield rates and ratios may be utilised along with district estimates of the number of relevant populations of animals/poultry.

District-wise value of output is estimated by evaluating the production obtained as above, by the corresponding district prices, wherever available. In the absence of district level prices, the state prices are utilised for evaluating the district production. The totals of the value of output thus worked out are then adjusted to the state level estimates.

In case of other animal products, the state level estimated value is distributed between the districts in proportion to the number of animals in each category separately.

District-wise increment in stock for each category of animal/poultry is worked out from the results of the latest two livestock censuses using compound growth rates and evaluated by using state prices.

Value of Inputs

Feed of livestock: For distribution of feed of livestock, it is assumed that feed of livestock used for crop production would be the total feed consumed by Adult Buffalo (Male) and

Adult Cattle (Male). District-wise value of feed of livestock for livestock sector is estimated by State level value of feed for livestock sector distributed according to district wise population of Adult Buffalo (Male) and Adult Cattle (Male).

Market Charges: The state level norms in respect of Livestock sectors are used for district income estimates also.

Repair and Maintenance of fixed assets and operational cost: District-wise data on fixed assets as available from All India Debt and Investment Survey (AIDIS) 70th survey round is used.

FISIM: State level value of FISIM may be distributed on the basis of total value of output of the district.

FORESTRY AND LOGGING

Major Forest Products: The district-wise value of output of timber is worked out using the district-wise production. In case of firewood, the district value of output is obtained by allocating state level estimates to the district in proportion to district-wise rural population.

Minor Forest Products: For district-wise data the state level value of minor forest produce is allocated to districts in proportion to the forest area in different districts.

In case of Trees Outside Forest: - For district-wise data the state level value of trees outside forest produce is allocated to districts in proportion to the forest area outside districts forest.

Repairs, Maintenance and other Operational Costs: State level ratio are utilised for working out district-wise estimates of repair, maintenance and other operational costs.

FISHING & AQUACULTURE

Inland Fishing: - In the case of inland fishing, the district-wise value of output is estimated by multiplying the district-wise production by corresponding district prices.

Subsistence fish and inputs valuation: - The state level norm/ratios are used for district income estimates.

MINING AND QUARRYING

Major minerals: - Petroleum & NG the state GVA is allocated to base district i.e., Dehradun. For other major minerals district-wise value of output as collected from Indian Bureau of Mines, Nagpur, is used to allocate the state estimates.

Minor minerals: - The district-wise value of output is collected from the State Mines and Geology Department & state GVA is allocated on its basis.

Input costs: - The state level input rates may be adopted for district estimates.

MANUFACTURING

Registered Manufacturing: - The district wise estimates of value added from the registered manufacturing sector are unavailable from Annual Survey of Industries (ASI) in our States, for which ASI covers the factories on sample basis. So, the State GVA available through ASI is apportioned among the district on the basis of person engaged data available through latest ASI Frame. The district wise ratio so developed is used to allocate State Registered Manufacturing GVA among the districts.

Unregistered Manufacturing: - The district-wise projected working force is used from economic census rounds and the value added per worker from the NSS surveys rounds is used to distribute the State level GVA of this sub sector. From the total of GVA, FISIM is deducted using the state level ratio of FISIM to GVA.

ELECTRICITY, GAS, WATER SUPPLY AND OTHER UTILITY SERVICES

Electricity: The state level value added from this sub-sector is distributed to districts in proportion to district-wise workforce. District-wise electricity consumption is used to deflate current estimates so as to estimate constant value.

Gas: State level value added from bio-gas is distributed according to the number of Biogas plants in each district obtained from the concerned department under twenty-point programme. For the remaining gas sector, the state level estimate is allocated to the districts on the basis of workforce.

Water supply: State level value added is allocated to districts in proportion to the district-wise salaries and wages collected from local bodies located in the district for the GG part and in the proportion of the workforce for the remaining part.

Remediation (recycling) & Remediation (sewerage & sanitation): State level value added is allocated to districts in proportion to the district-wise estimates of workforce.

Construction: - The estimate of state income from this sector is allocated to the districts on the basis of working force for the public (except local bodies) and private sector separately. In respect of local bodies, direct district-wise data as available is utilised.

TRANSPORT, STORAGE, COMMUNICATION & SERVICES RELATED TO BROADCASTING

Railways: State level estimates, as provided by CSO, are allocated to districts in proportion to the workforce engaged in Railways at district level.

Transport by other Means: Road Transport - Public Sector: The value added from this sub-sector at the state level is allocated to districts on the basis of district-wise workforce (public) in this activity.

Transport by other Means: Road Transport - Private Sector: The value added from the private sector is allocated to districts on the basis of district wise workforce in the private sector.

Air Transport: The state income from this sub-sector is allocated to the districts on the basis of district wise workforce.

Un- Organised Transport: The state level estimates are allocated to districts in proportion to gross value of output of commodity producing sectors.

Storage (Warehousing): State level estimates (Public) are allocated to districts on the basis of average storage capacity. State level estimates (Private) are allocated on the basis of district wise workforce.

Communication: State level estimates are allocated to districts in proportion to the workforce.

TRADE, REPAIR, HOTELS AND RESTAURANTS

The domestic product relating to 'Trade, Repair, Hotels and Restaurants' may be estimated district wise separately for the public and private sector. SDP relating to the public sector may be allocated to districts on the basis of district wise working force in the public sector. SDP relating to the private segment of the economy relating to this sector may be allocated by district in proportion to the workforce.

FINANCIAL SERVICES

The state income estimates of this sector may be allocated to the districts on the basis of district wise working force in these activities. If district-wise data on bank credits/deposits is available, the same may be used.

REAL ESTATE, OWNERSHIP OF DWELLINGS AND PROFESSIONAL SERVICES

Real Estate: State level estimates from these sub-sectors are allocated to districts in proportion to the workforce in these activities.

Ownership of Dwellings: State level estimates are allocated to districts in proportion to the number of dwellings (Rural/Urban) in each district based on census data.

Professional Services: State level estimates from these sub-sectors are allocated to districts in proportion to the workforce in these activities. In case of legal services, State level estimates are allocated to the districts in proportion to the district wise number of advocates registered in Bar Council.

PUBLIC ADMINISTRATION AND DEFENSE

The state income estimates of Central Government Administration, as provided by CSO and those of state government administration are distributed in proportion to the number of central/state government employees in each district. In case of local bodies district wise data collected from local bodies is used. In the case of Central Autonomous, GVA is apportioned on the basis of the number of units.

OTHER SERVICES

Education: State level estimates are allocated to districts on the basis of workforce in each district. Local Bodies estimates are allocated to districts on the basis of data collected from Local Bodies.

Human Health activities and care services with/without accommodation: State level estimates are allocated to districts on the basis of workforce in each district. Local Bodies estimates are allocated to districts on the basis of data collected from Local Bodies. Other remaining services & private households with employed person estimates are allocated to the districts on the basis of workforce.

CONSUMPTION OF FIXED CAPITAL

Sector wise ratio of consumption of fixed capital to Gross value added is adopted for the district level estimates.

ESTIMATES AT CONSTANT PRICES

The methodology for working out estimates at constant prices is more or less the same as that for current prices in the sectors of Agriculture and Livestock, Fishing, Mining and Quarrying. For the remaining sectors, the District Income estimates at constant prices are worked out using the state level deflator of current to constant prices. Depending on the availability of data this procedure is adopted.

LIMITATIONS

District Domestic Product is calculated indirectly as the data of different economic activity is not available at unit level. Certain indicators based on different economic activity are used to allocate the state level GVA among the districts. In Primary Sector, due to differences in prices at district level, district level figure cannot be clubbed to get the state level figures. Constant, FISM, CFC are calculated on pro-rata basis & hence carry its own limitation.

Methodology For DDP Estimation, DES Uttarakhand

S. N.	Sector/Item	Data used in State Estimates	Indicator used by DES for District Level Estimates	Sources	SNAC Recommendations	Remarks
1	2	3	4	5	6	7
1. Economic Activity - Crop-GVO						
1	Major Crops - Cereals, Pulses and Oilseeds	Area, Production and Prices	District wise data available, wherever prices not available neighbouring district or state prices are used	Department of Agriculture, food & Civil Supplies Department, Agriculture Marketing Department,	SNAC Recommendation followed	
2	Major Crops - Fruits, Vegetables, Spices and Flowers	Area, Production and Prices	District wise data available, wherever prices not available neighbouring district or state prices are used	Department of Horticulture	SNAC Recommendation followed	
3	Major Crops - By products	Area & Prices	District wise data available, however prices not available hence state prices are used	Department of Agriculture, food & Civil Supplies Department, Agriculture	SNAC Recommendation followed	
4	Miscellaneous crops - Grass	Area, Production & Prices	District wise data available, however, if prices not available hence state prices are used	Revenue Department	SNAC Recommendation followed	
5	Others Crops - Fodder	Area, Production & Prices	District wise data available, however, if prices not available hence state prices are used	Revenue Department	SNAC Recommendation followed	
Crop- Value of Inputs						
1	Seed	State Input Value	Gross Cropped Area in the district	DES	SNAC Recommendation followed	
2	Chemical Fertilizers	State Input Value	GVO of Dung Manure estimated in Livestock Sector	DES	SNAC Recommendation followed	
3	organic Manure	State Input Value	GVO of Dung Manure estimated in Livestock Sector	DES	SNAC Recommendation followed	
4	Feed of Livestock for Crop Sector	State Input Value	Population of Adult Cattle Male & Adult Buffalo Male	DES	SNAC Recommendation followed	
5	Pesticides and Insecticides	State Input Value	Gross Cropped Area in the district	DES	SNAC Recommendation followed	SNAC also recommend districtwise pesticides data to be used if

FEEDBACK FORM

1. **Name** (optional):
 2. **email id** (optional) :
 3. **Your field of Work**: (please tick () the relevant)

(a) Govt Sector	(b) Corporate Sector	(c) Research	(d) Civil Services
(e) NGO	(f) Education	(g) Art & Culture	(h) Media
(i) Business	(j) Student	(k) Other (Please specify) _____	
 4. Please mention the report/publication you are commenting on:
-

CONTENT

5. How useful/relevant is the report for your professional interests (please tick () the relevant)

(a) very useful	(b) Moderately Useful	(c) not at all useful
6. How useful/relevant is the report for your personal interests (please tick () the relevant)

(a) very useful	(b) Moderately Useful	(c) not at all useful

PRESENTATION

7. How do you find style of presentation of information of the report? (Please tick () the relevant)

(a) Excellent	(b) Very Good	(c) fair	(d) not good at all

ACCESSIBILITY

8. How easy was it to collect a copy of the Report (soft/hard copy)?

(a) Very easy	(b) Moderately easy	(c) difficult

9. ADDITIONAL COMMENTS

Please note: These comments may be used for internal and external promotional purposes but will not be attributed to the person making them, unless explicitly agreed to this in writing. (Please add extra sheet if required)

Thank you for completing our feedback form!
