<u>User Manual – Van Mitra</u>

Welcome Page and Login Page

Welcome to the Van Mitra mobile application.

This user manual will guide you through the various features and functionalities of our app designed to help you.

When you click on the Van Mitra App you will see the SplashScreenof the app that represents the App name and version of the app.

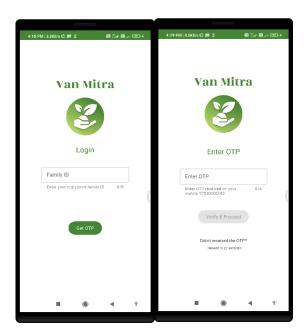

After Validating the version of the app, it will take you to the Selection of Language page where you will select the language as English / Hindi.

Choosing between English and Hindi as language options in the Van Mitra app provides advantages for better understanding.

Now After Selection of a particular language you will see a Login page, which ask to fill the 'Family ID' which you have to enter. Family ID is a maximum of eightcharacters, which is validated on the server side, if success then it will send OTP to the respective number against the Family ID.

After getting OTP to the respective number, you have to enter the OTP and it will be validated then you will redirect to the Dashboad page.

Dashboard Page

- It will show you with a greeting by taking the name of the user.
- It will show you the count of Pit Marked/Tree Planted.
- It has a button 'Mark New Plant Location' which will take you to the MapView where you can give the location where you want to plant a tree with a marker icon by touching in the map and givethe details.
- It has three buttons in the Bottom i.e. 'Highlights', 'My Trees' and 'MapView'.
- Highlight button is nothing but the home button i.e., Dashboard.
- My Trees button, where you can see the list of trees you marked in the map and that to be submitted to the server.
- The Map View button is used for showing you how to load the Haryana map from Portal and you will seethe 'Add New Plant' button to add themarker on the Map inside the green colour buffer showing with currentlocation.
 - Ensure that GPS accuracy is ten meters.
 - Ensure that the user is within the diameter of six meters within this activity.
 - Distance between two pit locations is within a bufferradius of sixmeters.
