Schedule-IV**(See Rule 12)****Proposed system to enhance security.**

The Database Administrator must be appointed from technical officer of High Court not below the rank of Registrar.

A. Central Examination Server :

- (1) Should be physically secure. No **unauthorized and unauthenticated** access should be given.
- (2) **Biometric technology** alongside with traditional password based technology should be used for securing server.
- (3) A **replica** of the same server should be available with geographically changed location.
- (4) Communication between the server should be **encrypted** with best possible technique like RES/MD5 etc.
- (5) The owner which has access to each server should be different. Owner of one server should not be able to access the second replica server.
- (6) A Monitor server should also be configured in same manner as of examination server but to store monitoring data such as audio/video/images/biometric data collected from each examination centre.

B. Examination server at each examination centre.

- (1) Each Examination centre should have **fingerprint reader at main gate** so that only those examinees are allowed whose fingerprint is stored on Examination server in Examination centre. User biometric information (**Fingerprint/fact recognition**) may be registered at the time of enrollment/form filling through authorized centre or kiosk only.
- (2) Each examinee should be validated by his/her own credential (id and password) through the server.
- (3) Exam Hall must have auto generated encrypted code for paper. Thus auto generated code (id) must be distributed randomly. The first

- candidate who comes in exam room shall have first code, second shall get second code and likewise.
- (4) The password of each user stored in the database should be in encrypted form.
 - (5) As soon as the exam gets over and data is submitted to database on Examination server at each examination centre, immediately the **DML (Data Manipulation Language) get locked for the database** so that the data could not be changed at any situation. (Database access time must be limited upto exam period only, whatever it may be 2 hrs or 3 hrs and after examination it must be blocked immediately and no command or deletion, addition, alteration shall be allowed. It is to ensure that the test is taken in a certain amount of time. Some automated testing programs allow this feature). The auto generated id is **for the internal use only** and not be opened to anyone except Examination In-charge having exclusive password..
 - (6) Each examination hall should have at least two CCTV cameras with audio recording facility to the monitoring server not less than 5 Mhz frequency. The camera must have sufficient electricity back up through UPS, so that the movement and activity of Examinee can be recorded in case of power failure. This data should be uploaded to monitoring server on real time basis.
 - (7) The recording of desktop of each Examinee computer should also be uploaded to monitoring server on real time basis which in turn to be secured at the monitoring server contemporaneously.
 - (8) The local server installed at Examination Centre should be connected through VPN to the master server. The internet connectivity on the local server to be disconnected. No possibility of hacking is possible in this configuration.
 - (9) The Examination Centre must have ISO 27001 certification or must be AICTE or NAAC accredited.
 - (10) The tentative answer keys for the objective type examinations should be ported on the website of MP High Court at earliest after the examination is over and candidates will be given 7 days time to file suggestions and objections, if any to the examination authority.
 - (11) The same will be placed before the Experts Committee of which Database Administrator is also a member for scrutiny and the corrected final answers be published on the website again.

C. Measures to be taken at Examination Centre

- (1) A firewall like software should be installed to each examinee computer. The task of this software is to remove vulnerabilities present in examinee computer. The tasks are listed as below:-
 - (i) Sync Examinee computer time with server time for effective log maintaining.

- (ii) All ports except those required for the online exam are disabled and the ports used can be chosen randomly for each examinee; the ports to be used have only to be sent to the examination server at examination centre with the IP of the exam client. Therefore, manipulation through a fixed port can be avoided.
- (iii) All other programs except the online exam client are deactivated by controlling the inputs of the examinees. By cutting off electronic communications and disabling other computer programs or inputs (including USB ports) on the examinees' computers, the examinees can be prohibited from manipulating their local computer or the internet. Only mouse should be enabled. The proprietary application software should be used and not to be used the open source software. (It must be ensured that use of Google Docs, screen share and opening new window in a separate tab to excess Google must be made impossible. The student cannot use offline material during online examination.)
- (iv) Online exam access should use **Respondus Lockdown Browser or its equivalent**. The proposed browser module presents to the user at startup a full-screen application window that encases a browser window. However, no address bar is provided, nor are there any menus, toolbars, buttons, or other controls that would be seen on a generic browser. The application window is locked in full-screen mode and cannot be resized or minimized until the application is terminated. Third party software like VNC viewer must be completely prohibited.
- (v) **Student id (specific auto generated id link) can work only one question at a time and cannot access completed questions.**
- (vi) An exam should randomize (scramble) question sequence and answer choices for every id link differently.
- (vii) **One (students) auto generated id link can access the online exam only one time.**
- (viii) The exam should close when the allotted time period for work expires. It is suggested that the exam end should be **triggered by Examination server to all of the examinee computers at once** and not the local time of Examinee computer / browser script should be used.

D. Network used for communication with each other.

- i. Communication between the server and examinee computer should be encrypted with best possible technique like RES/MD5 etc.
- ii. Communication between the Central server and Examination Hall server should be encrypted.
- iii. The server at examination centre should send the exam data to both of Central Servers on real time basis. (This step is required to prevent fraud at Central Server end or any other Source.)
- iv. Every log (Both Database and access log with client unique ID/Timestamp) of each communication between server and Examinee computer should be stored on real time basis for future reference.
(Database log is a log which is created every time when the data (Answer in this case) is inserted into the database with timestamp. Access log is a log which is created every time when the examinee computers access any page of Web server).
