

Educational and activity toys and games profoundly affect a child's learning. When kids learn through interactive and creative ways earlier in their age, they are more likely to acquire more intricate skills in their future. They become more decisive, confident, and social.

One of the educational toy based on Newton's third law prepared by student of class VII B .

Educational toys significantly impacts a child's development. They support cognitive growth by encouraging logical reasoning, creativity, and analytical thinking. These toys also enhance fine motor skills, spatial awareness, and hand-eye coordination.
