Structural Design Verification Certificate for KV School at Mancherla

The structural design of the following buildings was proof checked by me as a consultant.

- Main school building
- Type II, Type III, Type V Quarters

I have conducted a detailed review of structural design parameters of the foundation as well as super structure. On the review of drawings and structural models, I found the structure to be in 1) the compliance with the prevalent Indian Codes and design practices and (2) structurally safe and stable for the prevalent load demands of the codes.

Thank you.

Kind regards

Prof S. Suriya Prakash
