

PM SHRI KV AFS RAJOKRI, NEW DELHI

Innovations

1.Ecobricks

An Ecobrick is a plastic bottle densely filled with used plastics to create a reusable building block. These building blocks can be used for making garden fencing and furniture.

Ecobricks are used in Vidyalaya garden.

2.Adjuvant

An adjuvant is a surfactant that can be used for efficient irrigation in areas of shortage of water.

Adjuvant reduces surface tension of water and increases its penetration in water, prevents wastage of water by spreading on the surface. A small amount of water can do efficient irrigation.

3. Science experiments in morning assembly

A day is fixed in a week during morning assembly for science experiments by students to inculcate scientific temperament in students. This practice also helps the students to understand the various concepts of science.
