MARKING SCHEME (2025-26)
CHEMISTRY THEORY(043)

| SECTION A | | |
|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| 1. | (a) Gas with higher K_H has lower solubility. | 1 |
| 2. | (c) will have highest molar conductivity | 1 |
| 3. |  <p>(c) <chem>Cc1ccccc1.BrBr>>CBrCc1ccccc1.Br</chem> (Free radical substitution)</p> | 1 |
| 4. | (b) It will undergo substitution S_N2 and will lead to inversion. | 1 |
| 5. |  <p>(b) <chem>CC(=O)NC>>CCNC</chem></p> | 1 |
| 6. |  <p>(d) <chem>CCCC(=O)C(=C)C(=O)C</chem> 3-keto-2-methyl hex-4-en-1-al</p> | 1 |
| 7. | (c). Phenol gives violet colour with neutral $FeCl_3$, Ethanol does not react. | 1 |
| 8. | b) As the size of the lanthanide ions decreases the basic strength increases. | 1 |
| 9 | (c) 'C' is sp^2 hybridised as C—OH and C—Cl bonds are half broken and half formed. | 1 |
| 10 | (c) hydrogen bond | 1 |
| 11 | (b) $\Lambda_m - S \text{ cm}^2 \text{ mol}^{-1}$, $E_{\text{Cell}} - V$, $k - S \text{ cm}^{-1}$, $G^* - \text{m}^{-1}$ | 1 |
| 12 | (d) because these do not have α -hydrogen. | 1 |
| 13 | (c) Assertion is correct but reason is wrong statement. 'D' represents configuration, i.e., —OH group on right side on first chiral carbon from the bottom | 1 |
| 14 | (a) Assertion and reason both are correct statements and reason is correct explanation for assertion. | 1 |
| 15 | (a) Assertion and reason both are correct and reason is correct explanation of assertion | 1 |
| 16 | (b) Both A and R are true but R is not the correct explanation of A | 1 |
| SECTION B | | |
| 17 | <p>a. The resulting solution will show negative deviation from Raoult's law. The temperature of solution will increase.</p> <p>b. The cell will swell and even may burst due to inflow of solvent because of osmosis</p> | 1 1 |

| | | |
|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| 18 | <p>$[\text{Co}(\text{NH}_3)_6]^{3+}$: IUPAC name is Hexaammine cobalt(III)</p> <p>$\text{Co}(27)$: $[\text{Ar}] 4s^2 3d^7$</p> <p>$\text{Co}^{3+}(27)$: $[\text{Ar}] 4s^0 3d^6$</p> <p>$[\text{Co}(\text{NH}_3)_6]^{3+}$ </p> <p>It has d^2sp^3 hybridization, octahedral shape and diamagnetic in nature.</p> | 0.5 0.5 0.5+0.5 |
| 19 | <p>(i) $\text{rate} = k[\text{X}]^x[\text{Y}]^y$</p> <p>$0.05 = k [0.1]^x [0.2]^y \dots$ (i)</p> <p>$0.10 = k [0.2]^x [0.20]^y \dots$ (ii)</p> <p>Dividing (i) by (ii) we get</p> $\frac{1}{2} = \left(\frac{1}{2}\right)^x \Rightarrow x = 1$ <p>$0.05 = k [0.1]^x [0.1]^y$</p> <p>Dividing (i) by (iii) we get</p> $1 = [2]^y \Rightarrow 20 = 2^y \Rightarrow y = 0$ <p>$\text{rate} = k[\text{X}]^1[\text{Y}]^0$</p> <p>(ii) $0.05 = k [0.1] \Rightarrow k = 5 \times 10^{-1} \text{ min}^{-1}$</p> | 0.5 0.5 1 |
| 20 | <p>(i) Carbylamine reaction involves the reaction of a primary amine with chloroform in presence of alcoholic KOH that leads to the formation of isocyanide</p> $\text{R-NH}_2 + \text{CHCl}_3 + 3\text{KOH} \rightarrow \text{RNC} + 3\text{KCl} + 3\text{H}_2\text{O}$ <p>Hoffmann bromamide reaction involves a primary amide (RCONH_2), bromine, and sodium hydroxide as reactants to produce a primary amine (RNH_2) along with inorganic by-products. This reaction is categorized under organic rearrangement reactions.</p> $\text{RCONH}_2 + \text{Br}_2 + 4\text{NaOH} \rightarrow \text{RNH}_2 + \text{Na}_2\text{CO}_3 + 2\text{NaBr} + 2\text{H}_2\text{O}$ | 0.5 0.5 0.5 0.5 |

|------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------|
| 25 | <p>'A' is iron chromite (FeCr_2O_4), 'B' is sodium chromate (Na_2CrO_4), 'C' is sodium dichromate ($\text{Na}_2\text{Cr}_2\text{O}_7$) and 'D' is potassium dichromate ($\text{K}_2\text{Cr}_2\text{O}_7$).</p> $4\text{FeCr}_2\text{O}_4 + 8\text{Na}_2\text{CO}_3 + 7\text{O}_2 \longrightarrow 8\text{Na}_2\text{CrO}_4 + 2\text{Fe}_2\text{O}_3 + 8\text{CO}_2(\text{g})$ <p style="text-align: center;"> 'A' 'B' (Chromite ore) (Yellow solution) </p> $2\text{Na}_2\text{CrO}_4 + \text{H}_2\text{SO}_4 \longrightarrow \text{Na}_2\text{Cr}_2\text{O}_7 + \text{Na}_2\text{SO}_4 + \text{H}_2\text{O}$ <p style="text-align: center;"> 'C' 'C' </p> $\text{Na}_2\text{Cr}_2\text{O}_7 + 2\text{KCl} \longrightarrow 2\text{NaCl} + \text{K}_2\text{Cr}_2\text{O}_7$ <p style="text-align: center;"> 'C' 'D' </p> | <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> |
| 26 |  <p style="text-align: center;"> $\text{CH}_3-\text{CH}_2-\overset{\text{O}}{\parallel}{\text{C}}-\text{H} + \text{CH}_3\text{MgBr} \xrightarrow{\text{H}_2\text{O}/\text{H}^+} \text{CH}_3-\text{CH}_2-\underset{\text{OH}}{\text{CH}}-\text{CH}_3 \xrightarrow{\text{conc. H}_2\text{SO}_4} \text{CH}_3-\text{CH}=\text{CH}-\text{CH}_3$ Propanal 'A' Methyl magnesium bromide Butan-2-ol But-2-ene 'B' </p> <p style="text-align: center;"> $\text{CH}_3-\text{CH}=\text{CH}-\text{CH}_3 \xrightarrow{\text{Br}_2} \text{CH}_3-\underset{\text{Br}}{\text{CH}}-\underset{\text{Br}}{\text{CH}}-\text{CH}_3 \xrightarrow[\text{excess}]{\text{KOH (alc.)}} \text{CH}_3-\text{C}\equiv\text{C}-\text{CH}_3$ 2,3-Dibromobutane 'C' 2-Butyne 'D' </p> | <p style="text-align: center;">.5+.5+.5+.5</p> <p style="text-align: center;">1</p> |
| 27 | <p>(i) ethanal forms silver mirror with ammoniacal silver nitrate solution (Tollen's reagent) and propanone does not give this test.</p> <p>(ii) Pentan-2-one gives iodoform test and Pentan-3-one does not give iodoform test. Pentan-2-one gives white ppt with sodium bisulphite whereas pentan-3-one does not give ppt.</p> <p>(iii) Phenol does not react with sodium hydrogen carbonate and benzoic acid gives effervescence of carbon dioxide gas upon reaction with sodium hydrogen carbonate.</p> | <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> |
| 28 | $\text{CaCl}_2 \longrightarrow \text{Ca}^{2+} + 2\text{Cl}^-$ <p>$i = 3, \Delta T_f = 2\text{K}, W_B = ?, M_B = 111 \text{ g mol}^{-1}, W_A = 500 \text{ g}$</p> $\Delta T_f = i K_f \times \frac{W_B}{M_B} \times \frac{1000}{W_A}$ $\Rightarrow 2 = 3 \times 1.86 \times \frac{W_B}{111} \times \frac{1000}{500}$ $\therefore W_B = \frac{111}{5.58} = 19.89 \text{ g}$ | <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> <p style="text-align: center;">1</p> |
| SECTION D | | |

| | | |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| 29 | <p>Ans.(i). Crystal field splitting energy (Δ) refers to the difference in energy between two sets of d-orbitals that arises when ligands approach a transition metal ion.</p> <p>$\Delta_t = (4/9)\Delta_o$</p> <p>(ii) $[\text{CrCl}_6]^{3-}$, $[\text{Cr}(\text{NH}_3)_6]^{3+}$, $[\text{CrCN}_6]^{3-}$</p> <p>(iii) $t_{2g}^3 e_g^2$</p> | 2 1 1 |
| 30 | <p>Ans: (a) $\text{Cu} \longrightarrow \text{Cu}^{2+} + 2e^-$</p> <p>(b) ΔG° is positive for electrolytic cell.</p> <p>(c) Metals are good reducing agents. Therefore, cannot be obtained by chemical reduction.</p> <p>Aqueous solution cannot be used because they react with water.</p> <p>Or</p> <p>At cathode: $2\text{H}^+ + 2e^- \longrightarrow \text{H}_2(\text{g})$</p> <p>At anode: $2\text{Cl}^- - 2e^- \longrightarrow \text{Cl}_2(\text{g})$</p> <p>$\text{Cl}_2$ is obtained at anode and not oxygen due to over voltage.</p> | 1 1 2 2 |
| SECTION E | | |
| 31 | <p>(i)</p> $\begin{array}{c} \text{CHO} \\ \\ (\text{CHO})_4 \\ \\ \text{CH}_2\text{OH} \end{array} + \text{HI} \xrightarrow{\Delta} \text{CH}_3 - \text{CH}_2 - \text{CH}_2 - \text{CH}_2 - \text{CH}_2 - \text{CH}_3$ <p style="text-align: center; margin-left: 200px;">n-hexane</p> <p>(ii) Water soluble vitamin : Vitamin C</p> <p>(iii) On hydrolysis, lactose gives β-D-galactose and β-D-glucose.</p> <p>(iv) Function of nucleic acid : Nucleic acids control the transmission of hereditary characters from one generation to another.</p> <p>(v) m-RNA, t-RNA, r-RNA (any two)</p> <p style="text-align: center;">OR</p> <p>(i)</p> $\begin{array}{ccc} \begin{array}{c} \text{CHO} \\ \\ (\text{CHOH})_4 \\ \\ \text{CH}_2\text{OH} \\ \text{D-Glucose} \end{array} & \xrightarrow{\text{Br}_2 \text{ water}} & \begin{array}{c} \text{COOH} \\ \\ (\text{CHOH})_4 \\ \\ \text{CH}_2\text{OH} \\ \text{Gluconic acid} \end{array} \end{array}$ <p>(ii) Secondary structure of proteins : The conformation which the polypeptide chains assume as a result of hydrogen bonding is called the secondary structure of the protein.</p> <p>(iii) Amylopectin is water insoluble component of starch</p> | 1 1 1 1 1 1 1 1 |

(iv) Denaturation of protein : Due to coagulation of globular protein under the influence of change in temperature, change in pH etc., the native shape of the protein is destroyed and biological activity is lost and the formed protein is called denaturated proteins and the phenomenon is denaturation.

(v) Uracil is found in nucleotide of RNA only

32

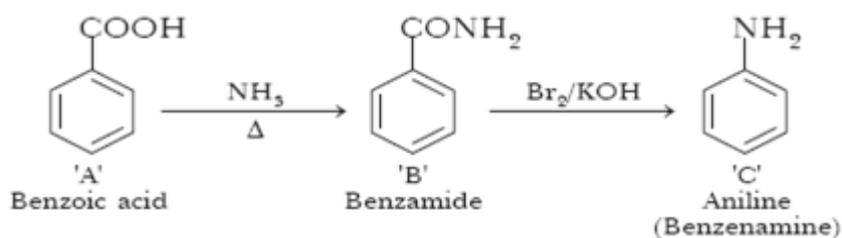

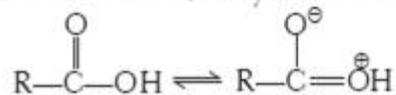

(b)(i) Aniline is a base, reacts with AlCl_3 (Lewis acid) to form salt (adduct).

(ii) It is due to +I effect of $-\text{CH}_3$ group in p-methyl aniline and -I effect of $-\text{NO}_2$ group in p-nitroaniline.

OR

(a) (i) It is because $\text{Cl}-\text{CH}_2\text{COO}^-$ ion is more stable than $\text{CH}_3-\overset{\text{O}}{\parallel}{\text{C}}-\text{O}^-$ due to -I effect of 'Cl' as Cl is electron withdrawing.

(ii) It is due to resonance, they do not have pure >C=O group

33

(a) (i) The reaction is of first order.

(ii) slope = $-k$ (iii) Unit of rate constant is s^{-1} .

(b)

$$t = \frac{2.303}{k} \log \frac{[R]_0}{[R]}$$

$$t_{99\%} = \frac{2.303}{k} \log \frac{[R]_0}{[R]_0 \times \frac{1}{100}} \quad \left[\because [R] = [R]_0 - \frac{99}{100} [R]_0 \right]$$

$$\Rightarrow t_{99\%} = \frac{2.303}{k} \log 100 = \frac{2.303 \times 2}{k} \quad \dots(i)$$

$$\text{Also, } t_{90\%} = \frac{2.303}{k} \log \frac{[R]_0}{[R]_0 \times \frac{10}{100}} \quad \left[\because [R] = [R]_0 - \frac{90}{100} [R]_0 \right]$$

$$\Rightarrow t_{90\%} = \frac{2.303}{k} \log 10 = \frac{2.303}{k} \quad \dots(ii)$$

From equations (i) and (ii)

$$t_{99\%} = 2 \times t_{90\%}$$

Or

(a) (i) The rate will become 4 times.

(ii) The overall order is equal to 2 if 'A' is in large excess.

(b)

$$t_{1/2} = 23.1 \text{ min.}$$

$$k = \frac{2.303}{t_{1/2}} \log \frac{[R]_0}{[R]_0/2}$$

$$\Rightarrow t_{1/2} = \frac{2.303}{k} \log 2$$

$$\Rightarrow k = \frac{2.303}{23.1} \times 0.3010 \text{ min}^{-1}$$

$$\text{Also, } t_{75\%} = \frac{2.303}{k} \log \frac{[R]_0}{[R]_0/4} = \frac{2.303 \times 23.1}{2.303 \times 0.3010} \log 4$$

$$\Rightarrow t_{75\%} = \frac{23.1}{0.3010} \times 0.6021 = 46.2 \text{ min}$$
