

24.	The nth term of an AP cannot be $n^2 + 1$ . Justify your answer. <b>(OR)</b> Which term of the A.P. 27, 24, 21,...is zero?	2												
25.	From an external point P, two tangents, PA and PB are drawn to a circle with centre O. At a point E on the circle, a tangent is drawn to intersect PA and PB at C and D, respectively. If PA = 10 cm, find the perimeter of $\triangle PCD$ .	2												
														
<b>SECTION C</b>														
26.	Prove that $\sqrt{3}$ is an irrational number.	3												
27.	Seven times a two-digit number is equal to four times the number obtained by reversing the order of the digits. If the difference of the digits is 3, determine the number.	3												
28.	Prove that a parallelogram circumscribing a circle is a rhombus. <b>(OR)</b> Prove that the lengths of tangents drawn from an external point to a circle are equal.	3												
29.	The line segment joining the points A (3, 2) and B (5,1) is divided at the point P in the ratio 1:2 and it lies on the line $3x - 18y + k = 0$ . Find the value of k. <b>(OR)</b> Find the coordinates of the points of trisection of the line segment joining (4, - 1) and (- 2, - 3)	3												
30.	Find the value of p if mean of the given data is 15.45 <table border="1" style="margin-left: auto; margin-right: auto;"> <tbody> <tr> <td>Class</td> <td>0 - 6</td> <td>6 - 12</td> <td>12 - 18</td> <td>18 - 24</td> <td>24 - 30</td> </tr> <tr> <td>frequency</td> <td>6</td> <td>8</td> <td>p</td> <td>9</td> <td>7</td> </tr> </tbody> </table>	Class	0 - 6	6 - 12	12 - 18	18 - 24	24 - 30	frequency	6	8	p	9	7	3
Class	0 - 6	6 - 12	12 - 18	18 - 24	24 - 30									
frequency	6	8	p	9	7									
31.	Prove that $\frac{1}{1+\sin A} + \frac{1}{1-\sin A} = 2 \sec^2 A$	3												
<b>SECTION D</b>														
32.	Had Anisha scored 10 more marks in her mathematics test out of 30 marks, 9 times these marks would have been the square of her actual marks. How many marks did she get in the test? <b>(OR)</b> Places A and B are 100 km apart on a highway. One car starts from A and another from B at the same time. If the cars travel in the same direction at different speeds, they meet in 5 hours. If they travel towards each other, they meet in 1 hour. What are the speeds of the two cars?	5												

<p><b>33.</b></p>	<p>If a line is drawn parallel to one side of a triangle to intersect the other two sides in distinct points, then prove that the other two sides are divided in the same ratio. Using above theorem find the value of <math>x</math> for which <math>DE \parallel AB</math> as given in figure.</p>	<p>5</p>
<p><b>34.</b></p>	<p>A man standing on the deck of a ship, which is 10 m above water level, observes the angle of elevation of the top of a hill as <math>60^\circ</math> and the angle of depression of the base of hill as <math>30^\circ</math>. Find the distance of the hill from the ship and the height of the hill. <b>(OR)</b> From a point P on the ground the angle of elevation of the top of a 10 m tall building is <math>30^\circ</math>. A flag is hoisted at the top of the building and the angle of elevation of the top of the flagstaff from P is <math>45^\circ</math>. Find the length of the flagstaff and the distance of the building from the point P. (take <math>\sqrt{3} = 1.732</math>)</p>	<p>5</p>
<p><b>35.</b></p>	<p>A horse is tied to a peg at one corner of a square shaped grass field of side 15 m by means of a 5 m long rope. Find: i) the area of that part of the field in which the horse can graze. ii) the area of the remaining field which the horse can't graze iii) the increase in the grazing area if the rope were 10 m long instead of 5 m. (Use <math>\pi = 3.14</math>)</p>	<p>5</p> 
<p><b>SECTION E</b></p>		
<p><b>36.</b></p>	<p>The below picture are few natural examples of parabolic shape which is represented by a quadratic polynomial. A parabolic arch is an arch in the shape of a parabola. In structures, their curve represents an efficient method of load, and so can be found in bridges and in architecture in a variety of forms.</p> <div style="display: flex; justify-content: space-around;">   </div>	<p>4</p>

- i) What is the name of the graph represented by the quadratic polynomial,  $ax^2 + bx + c$ , where  $a, b$  and  $c$  are real numbers and  $a \neq 0$  ?
- ii) How many zeroes does the polynomial  $x^2 + 4$  have?
- iii)(A) If the zeroes of the quadratic polynomial  $2x^2 - x + 8k$  are the reciprocals of each other, then find the value of  $k$ .

(OR)

iii)(B) If the sum of the roots is  $-p$  and product of the roots is  $-1/p$ , then find the quadratic polynomial.

37. Four friends Ayush, Minal, Rohan and Shreya are playing a board game called Food master. Shown below are the current positions on the board during the first round. 4

The rules of the game are:

- In each chance, two 6-sided fair dice numbered 1 to 6 are rolled by the player.
- The number of steps a player moves forward by is the sum of the numbers on the two dice.
- Each player gets a restaurant card for their first visit to any of the 16 restaurants.
- After 10 rounds, the player with the most number of restaurant cards wins.

FREE PARKING 					Minal 	ROLL AGAIN 	
	ARAB	GREEK	ITALIAN	BENGALI			
	FRENCH	<b>FOOD MASTER</b>				SINDHI	
	KOREAN					IRISH	Shreya 
	ODIA					PARSI	
Ayush 	JEWISH					MUGHAL	
MISS A CHANCE 	CHINESE					THAI 	GOAN
		Rohan					

Now answer the following questions based on the data which is given above.

- i) What are the chances that Rohan lands on 'FREE PARKING' in his next turn?
- ii) What is the probability of Minal landing on "ROLL AGAIN" in her next turn?
- iii)(A) Among Minal and Shreya, who has a higher chance of landing on the Goan restaurant in their next turn?

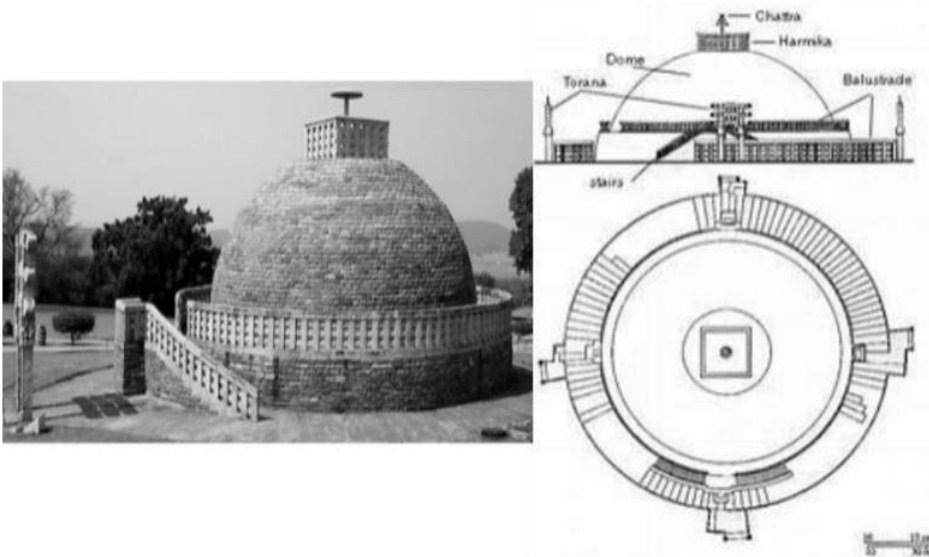

(OR)

iii)(B) Who among Shreya or Rohan has a higher probability of reaching Ayush at the Jewish restaurant in their next turn?

38.

The Great Stupa at Sanchi is one of the oldest stone structures in India, it was originally commissioned by the emperor Ashoka in the 3<sup>rd</sup> century BCE. It is a perfect example of combination of solid figures. It has a hemispherical dome with a cuboidal structure mounted on it of dimensions 8m x 6m x 4m (take  $\pi=22/7$ )

4

- i) Calculate the volume of the cuboidal shaped top with the above-mentioned dimensions.
- ii) Write the formula to find volume of the sphere.
- iv)(A) Find the cloth required to cover the hemispherical dome if the radius of its base is 14m.

(OR)

- iii) (B) Calculate the volume of the hemispherical dome if the height of the dome is 21m.
