

Building As Learning Aid

BALA (Building as Learning Aid) is an innovative approach to transforming school environments into a more engaging and effective educational space. In Kendriya Vidyalayas (KVs), BALA art is used to integrate visual, tactile, and physical elements into the school infrastructure, making learning more interactive and enjoyable. Here are some key aspects of BALA art in KVs:

- Educational Murals and Art:** Walls and floors are painted with educational content, such as maps, mathematical shapes, scientific diagrams, and language alphabets, helping students to learn outside the traditional classroom setting.
- Interactive Spaces:** Corridors, staircases, and open areas are designed with games, puzzles, and physical activities that encourage learning through play and movement.
- Learning Corners:** Specific corners or sections of classrooms and school grounds are dedicated to subjects like science, math, or language, equipped with relevant educational tools and resources.
- Environmental Themes:** Use of natural elements and eco-friendly materials to teach students about sustainability and the environment.
- Student Involvement:** Students participate in creating and maintaining BALA elements, fostering a sense of ownership and engagement in their learning environment.

BALA art in KVs aims to make learning a continuous and integrated process, encouraging curiosity and creativity among students.
