SOCIAL STUDIES	
ARTIFICIAL INTELLIGENCE	Artificial Intelligence is the science of creating machines that can think and learn like humans. During this holiday homework, you will learn about the stages of an AI project cycle—starting from understanding the problem, collecting and exploring data, building models, and finally evaluating the results. You will also explore the importance of AI ethics, which means using AI responsibly and fairly to protect people's privacy and safety. Additionally, you will study how AI can help in achieving sustainable development goals to make the world better. Your task is to create a simple diagram of the AI project cycle and write a few lines on why ethical AI is important. This homework will help you understand AI's role in technology and society.
During the upcoming autumn break, special extra classes will be conducted for students of classes X and XI to help them better prepare for their Board Examinations, so no separate holiday homework will be provided during these holidays. Instead, homework and assignments will be given after school on the day of the extra classes, ensuring that students can focus on revision and doubt clearance while attending these sessions. This approach allows students to make the best use of the autumn break for academic enrichment and targeted learning support.
