

Skill education focuses on imparting practical skills that are directly applicable to real-world situations. It helps students develop competencies in areas such as communication, problem-solving, critical thinking, teamwork, adaptability, and leadership.

In KV Keshavpuram students are taught through Work Education subject. This subject deals in imparting education of handling and repairing various electrical and electronics devices.

Artificial intelligence (AI) is also introduced in our school. From classes 8th to 10th is subjects taught. AI's integration into school education offers numerous benefits, from personalized learning experiences to more efficient administrative processes, ultimately contributing to a more effective and inclusive educational system.
