The world beyond the palace.

Just as the Buddha's teachings were compiled by his followers, the teachings of Mahavira were also recorded by his disciples. These were often in the form of stories, which could appeal to ordinary people. Here is one example, from a Prakrit text known as the UttaradhyayanaSutta, describing how a queen named Kamalavati tried to persuade her husband to renounce the world: If the whole world and all its treasures were yours, you would not be satisfied, nor would all this be able to save you. When you die, O king and leave all things behind, dhamma alone, and nothing else, will save you. As a bird dislikes the cage, so do I dislike (the world). I shall live as a nun without offspring, without desire, without the love of gain, and without hatred ...Those who have enjoyed pleasures and renounced them, move about like the wind, and go wherever they please, unchecked like birds in their flight ... Leave your large kingdom ... abandon what pleases the senses, be without attachment and property, then practise severe penance, being firm of energy

One of the simplest methods of preventing corrosion is to prevent the surface of the metallic object to come in contact with atmosphere

#### Case Study Based Questions

- 29 **Read the following paragraph and answers the questions:** 4  
 A pure semiconductor like Ge or Si, when doped with a small amount of suitable impurity, becomes an extrinsic semiconductor. In thermal equilibrium, the electron and hole concentration in it are related to the concentration of intrinsic charge carriers. A p-type or n-type semiconductor can be converted into a p-n junction by doping it with suitable impurity. Two processes, diffusion and drift take place during formation of a p-n junction. A semiconductor diode is basically a p-n junction with metallic contacts provided at the ends for the application of an external voltage. A p-n junction diode allows currents to pass only in one direction when it is forward biased. Due to this property, a diode is widely used to rectify alternating voltages, in half-wave or full wave configuration.
- (i) When Ge is doped with pentavalent impurity, the energy required to free the weakly bound electron from the dopant is about  
 (A) 0.001 eV (B) 0.01 eV  
 (C) 0.72 eV (D) 1.1 eV
- (ii) At a given temperature, the number of intrinsic charge carriers in a semiconductor is  $2 \times 10^{10} \text{ cm}^3$ . It is doped with pentavalent impurity atoms. As a result, the number of holes in it becomes  $8 \times 10^3 \text{ cm}^{-3}$ . The number of electrons in the semiconductor is  
 (A)  $2 \times 10^{24} \text{ m}^{-3}$  (B)  $4 \times 10^{23} \text{ m}^{-3}$   
 (C)  $1 \times 10^{22} \text{ m}^{-3}$  (D)  $5 \times 10^{22} \text{ m}^{-3}$

(A) electrons diffuse from p-region into n-region and holes diffuse from n-region into p-region.

(B) both electrons and holes diffuse from n-region into p-region.

(C) electrons diffuse from n-region into p-region and holes diffuse from p-region into n-region.

(D) both electrons and holes diffuse from p-region into n-region.

30 **Read the following paragraph and answers the questions:**

**Photoelectric emission:-** The photoelectric emission experiment involves shining a monochromatic light of sufficient frequency onto a photosensitive metal plate inside an evacuated glass tube, which causes electrons to be ejected. The emitted electrons (photoelectrons) flow to a collector plate, creating a photoelectric current that can be measured by a micro-ammeter. The experiment allows for controlling the light's intensity and frequency and the potential difference between the plates to study how these factors affect the ejected electrons. A crucial condition is that the light's frequency must be above a certain "threshold frequency" for the metal, below which no emission will occur, regardless of the light's intensity.

(i) What is the value of stopping potential at threshold frequency? **(1 Mark)**

(ii) The work function of a substance is 1.6 eV. Find the longest wavelength of light that can produce photoemission from the surface of substance. **(1 Mark)**

#### SECTION D-Case Study Based Questions

- 29 **Read the following paragraph and answers the questions:** 4

**Semiconductor:** A pure semiconductor like Ge or Si, when doped with a small amount of suitable impurity, becomes an extrinsic semiconductor. In thermal equilibrium, the electron and hole concentration in it are related to the concentration of intrinsic charge carriers. A p-type or n-type semiconductor can be converted into a p-n junction by doping it with suitable impurity. Two processes, diffusion and drift take place during formation of a p-n junction. A semiconductor diode is basically a p-n junction with metallic contacts provided at the ends for the application of an external voltage. A p-n junction diode allows currents to pass only in one direction when it is forward biased. Due to this property, a diode is widely used to rectify alternating voltages, in half-wave or full wave configuration.

(i) When Ge is doped with pentavalent impurity, the energy required to free the weakly bound electron from the dopant is about

- (A) 0.001 eV                      (B) 0.01 eV  
 (C) 0.72 eV                        (D) 1.1 eV

(ii) At a given temperature, the number of intrinsic charge carriers in a semiconductor is  $2 \times 10^{10} \text{ cm}^{-3}$ . It is doped with pentavalent impurity atoms. As a result, the number of holes in it becomes  $8 \times 10^3 \text{ cm}^{-3}$ . The number of electrons in the semiconductor is

- (A)  $2 \times 10^{24} \text{ m}^{-3}$                       (B)  $4 \times 10^{23} \text{ m}^{-3}$   
 (C)  $1 \times 10^{22} \text{ m}^{-3}$                         (D)  $5 \times 10^{22} \text{ m}^{-3}$

(iii) During the formation of a p-n junction -

(A) electrons diffuse from p-region into n-region and holes diffuse from n-region into p-region.

(B) both electrons and holes diffuse from n-region into p-region.

(C) electrons diffuse from n-region into p-region and holes diffuse from p-region into n-region.

(D) both electrons and holes diffuse from p-region into n-region.

(v) An ac voltage  $V = 0.5 \sin(100 \pi t)$  volt is applied, in turn, across a half-wave rectifier and a full-wave rectifier. The frequency of the output voltage across them respectively will be

(A) 50 Hz, 100 Hz

(C) 50 Hz, 50 Hz

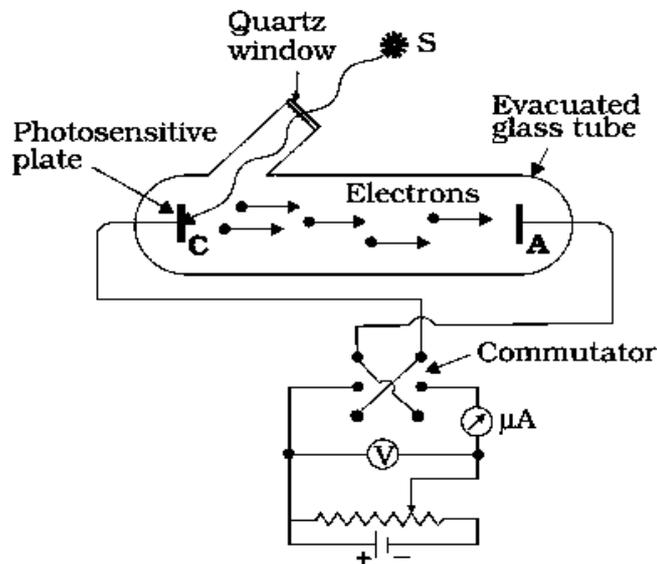

(B) 25 Hz, 100 Hz

(D) 25 Hz, 50 Hz

30 **Read the following paragraph and answers the questions:**

4

**Photoelectric Emission:** - The photoelectric emission experiment involves shining a monochromatic light of sufficient frequency onto a photosensitive metal plate inside an evacuated glass tube, which causes electrons to be ejected. The emitted electrons (photoelectrons) flow to a collector plate, creating a photoelectric current that can be measured by a micro-ammeter. The experiment allows for controlling the light's intensity and frequency and the potential difference between the plates to study how these factors affect the ejected electrons. A crucial condition is that the light's frequency must be above a certain "threshold frequency" for the metal, below which no emission will occur, regardless of the light's intensity.

(i) What is the value of stopping potential at threshold frequency? **(1 Mark)**

(ii) The work function of a substance is 1.6 eV. Find the longest wavelength of light that can produce photoemission from the surface of substance. **(1 Mark)**

बालमन तकनीक के जाल में बुरी तरह उलझ गया है। खेल, सूचनाएँ, अध्ययन से जुड़ी सामग्री, विद्यालयी गतिविधियों की जानकारीयाँ और मित्रता तक सब कुछ बच्चे तकनीकी संसाधनों के माध्यम से ले रहे हैं। तकनीक के सीमित क्षेत्र में मासूम मन ने अपनी एक अलग दुनिया बना ली है। पल-पल अवतरित होती सामग्री बालमन को बहला ही नहीं, भटका भी रही है। हर तरह के रंग लिए इस सामग्री में रमे बच्चों को कोई हिदायत या अभिभावकों की सहज सलाह भी स्वीकार नहीं। इन माध्यमों ने बच्चों की मासूमियत ही नहीं समझ भी छीन ली है।

विश्व स्वास्थ्य संगठन ने मोबाइल गेमिंग की लत को एक डिसऑर्डर माना है। इस आभासी व्यस्तता के कारण एकाग्रता के साथ-साथ बच्चों की बाल सुलभ रचनात्मकता भी खो रही है।

गेमिंग की लत के कारण शारीरिक गतिविधियाँ घटने से बच्चों को मोटापा, आलस और अनिद्रा की समस्याएँ घेर रही हैं। एम्स के चिकित्सकों के अनुसार हमारे यहाँ 2050 तक लगभग 40 से 45 फीसदी बच्चे मायोपिया का शिकार हो जाएँगे। बच्चों की इस बदलती दुनिया में अभिभावकों का समय रहते चेतना आवश्यक है। बच्चों और बड़ों के बीच नियमित संवाद ज़रूरी है। घर का माहौल बदलना और माता-पिता का भी स्मार्टफोन की चकाचौंध से दूर रहना पहला क़दम है। मोबाइल फोन की लत के शिकार बच्चों को धीरे-धीरे संयम के साथ सहज जीवन की ओर मोड़ना होगा।

- बीते दिनों फ्रांस में स्नायु विज्ञानी, मनोवैज्ञानिक और अन्य विशेषज्ञों की समिति ने अपनी रिपोर्ट में सिफारिश की है कि बच्चों को तेरह वर्ष की आयु तक स्मार्टफोन का प्रयोग नहीं करने देना चाहिए और 18 वर्ष की आयु तक सोशल मीडिया मंचों के प्रयोग पर भी पूरी तरह रोक लगा देनी चाहिए। तकनीक के इस जाल में उलझने से बचाने या उलझने के बाद फिर सहज जीवन से जोड़ने का पहलू हो, दोनों मोर्चों पर माता-पिता का संयमित और समझ भरा बर्ताव बच्चों का जीवन सहेज सकता है।
- (i) वर्तमान समय में बालमन किसमें उलझा हुआ है ? 1
- (A) खेलकूद के जाल में (B) परीक्षाओं की तैयारी में  
(C) तकनीक के जाल में (D) आभासी मित्रों के जाल में

- कथन : आभासी दुनिया में रमे बच्चों को बड़ों की सहज सलाह भी स्वीकार्य नहीं है।  
कारण : तकनीकी संसाधनों ने बच्चों की मासूमियत के साथ-साथ उनके सोचने समझने की शक्ति को भी प्रभावित किया है।
- विकल्प :**
- (A) कथन तथा कारण दोनों ग़लत हैं।  
(B) कारण सही है. किंतु कथन ग़लत है।  
(C) कथन सही है. किंतु कारण. कथन की ग़लत व्याख्या करता है।  
(D) कथन तथा कारण दोनों सही हैं तथा कारण. कथन की सही व्याख्या करता है।
- (iii) निम्नलिखित कथनों पर विचार कीजिए : 1
- कथन I : तकनीकी सामग्री से बालमन भटक रहा है।  
कथन II : तकनीकी सामग्री का बच्चों की मासूमियत पर कोई असर नहीं पड़ता ।  
कथन III : तकनीकी सामग्री के कारण बच्चे कुशाग्र बुद्धि बन रहे हैं।  
कथन IV : तकनीकी सामग्री के कारण बच्चों की एक अलग दुनिया बन चुकी है।  
गद्यांश के अनुसार कौन-से कथन सही हैं ?
- (A) केवल कथन I, II और III सही हैं।  
(B) केवल कथन II और III सही हैं।  
(C) केवल कथन I, II और IV सही हैं।  
(D) केवल कथन I और IV सही हैं।

- (v) मोबाइल गेमिंग का बच्चों पर क्या प्रभाव पड़ रहा है ? 2
- (vi) आभासी दुनिया के दुष्प्रभावों से बच्चों को बचाने के लिए अभिभावकों को क्या-क्या कदम उठाने चाहिए ? 2

जीवन का अभियान दान-बल से अजस्र चलता है,  
उतनी बढ़ी ज्योति, स्नेह जितना अनल्प जलता है।  
और दान में रोकर या हँसकर हम जो देते हैं,  
अहंकारवश उसे स्वत्व का त्याग मान लेते हैं।  
यह न स्वत्व का त्याग, दान तो जीवन का झरना है,  
रखना उसको रोक, मृत्यु से पहले ही मरना है,  
किस पर करते कृपा वृक्ष यदि अपना फल देते हैं ?  
गिरने से उसको सँभाल, क्यों रोक नहीं लेते हैं ?  
ऋतु के बाद फलों का रुकना डालों का सड़ना है,  
मोह दिखाना देय वस्तु पर आत्मघात करना है।  
देते तरु इसलिए कि रेशों में मत कीट समाएँ  
रहें डालियाँ स्वस्थ कि उनमें नये-नये फल आएँ  
जो नर आत्मदान से अपना जीवन घट भरते हैं  
वही मृत्यु के मुख में भी पड़कर न कभी मरते हैं  
जहाँ कहीं है ज्योति जगत में, जहाँ कहीं उजियाला  
वहाँ खड़ा है कोई अंतिम मोल चुकाने वाला।

- (i) दान को जीवन का झरना क्यों कहा गया है ? 1
- (A) दान कभी व्यर्थ नहीं जाता  
(B) दान देने से कीर्ति बनी रहती है  
(C) दान को रोकने से मृत्यु से पहले ही मृत्यु हो जाती है

बालमन तकनीक के जाल में बुरी तरह उलझ गया है। खेल, सूचनाएँ, अध्ययन से जुड़ी सामग्री, विद्यालयी गतिविधियों की जानकारीयाँ और मित्रता तक सब कुछ बच्चे तकनीकी संसाधनों के माध्यम से ले रहे हैं। तकनीक के सीमित क्षेत्र में मासूम मन ने अपनी एक अलग दुनिया बना ली है। पल-पल अवतरित होती सामग्री बालमन को बहला ही नहीं, भटका भी रही है। हर तरह के रंग लिए इस सामग्री में रमे बच्चों को कोई हिदायत या अभिभावकों की सहज सलाह भी स्वीकार नहीं। इन माध्यमों ने बच्चों की मासूमियत ही नहीं समझ भी छीन ली है।

विश्व स्वास्थ्य संगठन ने मोबाइल गेमिंग की लत को एक डिसऑर्डर माना है। इस आभासी व्यस्तता के कारण एकाग्रता के साथ-साथ बच्चों की बाल सुलभ रचनात्मकता भी खो रही है। गेमिंग की लत के कारण शारीरिक गतिविधियाँ घटने से बच्चों को मोटापा, आलस और अनिद्रा की समस्याएँ घेर रही हैं। एम्स के चिकित्सकों के अनुसार हमारे यहाँ 2050 तक लगभग 40 से 45 फीसदी बच्चे मायोपिया का शिकार हो जाएँगे।

बच्चों की इस बदलती दुनिया में अभिभावकों का समय रहते चेतना आवश्यक है। बच्चों और बड़ों

के बीच नियमित संवाद ज़रूरी है। घर का माहौल बदलना और माता-पिता का भी स्मार्टफोन की चकाचौंध से दूर रहना पहला कदम है। मोबाइल फोन की लत के शिकार बच्चों को धीरे-धीरे संयम के साथ सहज जीवन की ओर मोड़ना होगा। बीते दिनों फ्रांस में स्नायु विज्ञानी, मनोवैज्ञानिक और अन्य विशेषज्ञों की समिति ने अपनी रिपोर्ट में सिफारिश की है कि बच्चों को तेरह वर्ष की आयु तक स्मार्टफोन का प्रयोग नहीं करने देना चाहिए और 18 वर्ष की आयु तक सोशल मीडिया मंचों के प्रयोग पर भी पूरी तरह रोक लगा देनी चाहिए। तकनीक के इस जाल में उलझने से बचाने या उलझने के बाद फिर सहज जीवन से जोड़ने का पहलू हो, दोनों मोर्चों पर माता-पिता का संयमित और समझ भरा बर्ताव बच्चों का जीवन सहेज सकता है।

 (D) कथन तथा कारण दोनों सही हैं तथा कारण. कथन की सही व्याख्या करता है।

जीवन का अभियान दान-बल से अजस्र चलता है,  
 उतनी बढ़ी ज्योति, स्नेह जितना अनल्प जलता है।  
 और दान में रोकर या हँसकर हम जो देते हैं,  
 अहंकारवश उसे स्वत्व का त्याग मान लेते हैं।  
 यह न स्वत्व का त्याग, दान तो जीवन का झरना है,  
 रखना उसको रोक, मृत्यु से पहले ही मरना है,  
 किस पर करते कृपा वृक्ष यदि अपना फल देते हैं?  
 गिरने से उसको सँभाल, क्यों रोक नहीं लेते हैं?  
 ऋतु के बाद फलों का रुकना डालों का सड़ना है,  
 मोह दिखाना देय वस्तु पर आत्मघात करना है।  
 देते तरु इसलिए कि रेशों में मत कीट समाएँ  
 रहें डालियाँ स्वस्थ कि उनमें नये-नये फल आएँ  
 जो नर आत्मदान से अपना जीवन घट भरते हैं  
 वही मृत्यु के मुख में भी पड़कर न कभी मरते हैं  
 जहाँ कहीं है ज्योति जगत में, जहाँ कहीं उजियाला  
 वहाँ खड़ा है कोई अंतिम मोल चुकाने वाला।

**1. Read the following passage carefully:**

12

1. Willpower determines whether and how long we can follow through on our decisions. Interestingly, research suggests the general population is indeed aware of how essential willpower is to their wellbeing; survey participants routinely identify a 'lack of willpower' as the major impediment to making beneficial life changes. There are, however, misunderstandings surrounding the nature of willpower and how we can acquire more of it. There is a widespread misperception, for example, that increased leisure time would lead to subsequent increase in willpower.
2. Although the concept of willpower is often explained through single-word terms, such as 'resolve' or 'drive', it refers in fact to a variety of behaviours and situations. There is a common perception that willpower entails resisting some kind of a 'treat', such as a sugary drink or a lazy morning in bed, in favour of decisions that we know are better for us, such as drinking water or going to the gym. Of course this is a familiar phenomenon for all. Yet willpower also involves elements such as overriding negative thought processes, biting your tongue in social situations, or persevering through a difficult activity. At the heart of any

exercise of willpower, however, is the notion of 'delayed gratification', which involves resisting immediate satisfaction for a course that will yield greater or more permanent satisfaction in the long run.

3. Scientists are making general investigations into why some individuals are better able than others to delay gratification and thus employ their willpower, but the genetic or environmental origins of this ability remain a mystery for now. Some groups who are particularly vulnerable to reduced willpower capacity, such as those with addictive personalities, may claim a biological origin for their problems. What is clear is that levels of willpower typically remain consistent over time. A research by Matthew Gailliot suggests that willpower, even in the absence of physical activity, both requires and drains blood glucose levels, suggesting that willpower operates more or less like a 'muscle', and, like a muscle, requires fuel for optimum functioning.
4. Strengthening willpower thus relies on a two-pronged approach: reducing negative influences and improving positive ones. One of the most popular and effective methods simply involves avoiding willpower depletion triggers, and is based on the old adage, 'out of sight, out of mind'. In one study, workers who kept a bowl of enticing candy on their desks were far more likely to indulge than those who placed it in a desk drawer. It also appears that finding sources of motivation from within us may be important. (452 words)

- I. Air pollution is a major threat to human health. The United Nations Environment Programme has estimated that, globally, 1.1 billion people breathe in unhealthy air. The World Health Organization (WHO) has estimated that urban air pollution is responsible for approximately 800,000 deaths and 4.6 million people lose their lives every year around the globe.
- II. Traffic and transportation problems, inadequate drainage facilities, lack of open spaces, carbon emission, and the accumulation of waste aggravate the problem. Air pollution is associated with increased risk of acute respiratory infections (ARI), the principal cause of infant and child mortality in developing countries.
- III. Urban air quality in most mega cities has been found to be critical and Kolkata is no exception to this. An analysis of ambient air quality in Kolkata was done by applying the Exceedance Factor (EF) method, where the presence of listed pollutants' (RPM, SPM, NO<sub>2</sub> and SO<sub>2</sub>,) annual average concentration are classified into four different categories; namely critical, high, moderate, and low pollution. Out of a total of 17 ambient air quality monitoring stations operating in Kolkata, five fall under the critical category, and the remaining 12 locations fall under the high category of NO<sub>2</sub>, concentration, while for RPM, four record critical, and 13 come under the high pollution category. The causes of high concentration of pollutants in the form of NO<sub>2</sub> and RPM have been identified in earlier studies as vehicular emission (51.4%), followed by industrial sources (24.5%) and dust particles (21.1%).
- IV. Later, a health assessment was undertaken with a structured questionnaire at some nearby dispensaries which fall under areas with different ambient air pollution levels. Three dispensaries have been surveyed with 100 participants. It shows that respondents with respiratory diseases (85.1%) have outnumbered waterborne diseases (14.9%) and include acute respiratory infections (ARI) (60%), chronic obstructive pulmonary diseases (COPD) (7.8%), upper track respiratory infection (UTRI) (1.2%), Influenza (12.76), and acid-fast bacillus (AFB) (3.4%).

V. To live a healthy life and have better well-being, practicing pollution averting activities in one's day-to-day activities is needed. These pollution-averting practices can only be possible when awareness among the masses is generated that the air, they breathe outdoors, is not found to be safe.

## SECTION A: READING SKILLS – 22 MARKS

### 1. Read the following passage carefully:

12

1. Willpower determines whether and how long we can follow through on our decisions. Interestingly, research suggests the general population is indeed aware of how essential willpower is to their wellbeing; survey participants routinely identify a 'lack of willpower' as the major impediment to making beneficial life changes. There are, however, misunderstandings surrounding the nature of willpower and how we can acquire more of it. There is a widespread misperception, for example, that increased leisure time would lead to subsequent increase in willpower.
2. Although the concept of willpower is often explained through single-word terms, such as 'resolve' or 'drive', it refers in fact to a variety of behaviours and situations. There is a common perception that willpower entails resisting some kind of a 'treat', such as a sugary drink or a lazy morning in bed, in favour of decisions that we know are better for us, such as drinking water or going to the gym. Of course this is a familiar phenomenon for all. Yet willpower also involves elements such as overriding negative thought processes, biting your tongue in social situations, or persevering through a difficult activity. At the heart of any exercise of willpower, however, is the notion of 'delayed gratification', which involves resisting immediate satisfaction for a course that will yield greater or more permanent satisfaction in the long run.
3. Scientists are making general investigations into why some individuals are better able than others to delay gratification and thus employ their willpower, but the genetic or environmental origins of this ability remain a mystery for now. Some

groups who are particularly vulnerable to reduced willpower capacity, such as those with addictive personalities, may claim a biological origin for their problems. What is clear is that levels of willpower typically remain consistent over time. A research by Matthew Gailliot suggests that willpower, even in the absence of physical activity, both requires and drains blood glucose levels, suggesting that willpower operates more or less like a 'muscle', and, like a muscle, requires fuel for optimum functioning.

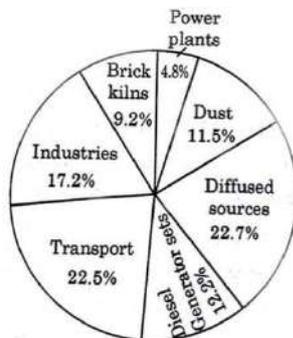

4. Strengthening willpower thus relies on a two-pronged approach: reducing negative influences and improving positive ones. One of the most popular and effective methods simply involves avoiding willpower depletion triggers, and is based on the old adage, 'out of sight, out of mind'. In one study, workers who kept a bowl of enticing candy on their desks were far more likely to indulge than those who placed it in a desk drawer. It also appears that finding sources of motivation from within us may be important. (452 words)

| I. Air pollution is a major threat to human health. The United Nations Environment Programme has estimated that, globally, 1.1 billion people breathe in unhealthy air. The World Health Organization (WHO) has estimated that urban air pollution is responsible for approximately 800,000 deaths and 4.6 million people lose their lives every year around the globe. |    |

- II. Traffic and transportation problems, inadequate drainage facilities, lack of open spaces, carbon emission, and the accumulation of waste aggravate the problem. Air pollution is associated with increased risk of acute respiratory infections (ARI), the principal cause of infant and child mortality in developing countries.
- III. Urban air quality in most mega cities has been found to be critical and Kolkata is no exception to this. An analysis of ambient air quality in Kolkata was done by applying the Exceedance Factor (EF) method, where the presence of listed pollutants' (RPM, SPM, NO<sub>2</sub> and SO<sub>2</sub>,) annual average concentration is classified into four different categories; namely critical, high, moderate, and low pollution. Out of a total of 17 ambient air quality monitoring stations operating in Kolkata, five fall under the critical category, and the remaining 12 locations fall under the high category of NO<sub>2</sub> concentration, while for RPM, four record critical, and 13 come under the high pollution category. The causes of high concentration of pollutants in the form of NO<sub>2</sub> and RPM have been identified in earlier studies as vehicular emission (51.4%), followed by industrial sources (24.5%) and dust particles (21.1%).
- IV. Later, a health assessment was undertaken with a structured questionnaire at some nearby dispensaries which fall under areas with different ambient air pollution levels. Three dispensaries have been surveyed with 100 participants. It shows that respondents with respiratory diseases (85.1%) have outnumbered waterborne diseases (14.9%) and include acute respiratory infections (ARI) (60%), chronic obstructive pulmonary diseases (COPD) (7.8%), upper track respiratory infection (UTRI) (1.2%), Influenza (12.76), and acid-fast bacillus (AFB) (3.4%).
- V. To live a healthy life and have better well-being, practicing pollution averting activities in one's day-to-day activities is needed. These pollution-averting practices can only be possible when awareness among the masses is generated that the air, they breathe outdoors, is not found to be safe.
