

Brief Report on Trainings and Workshops

KV KANKINARA Conducted a training session on basic electrical items for students in classes 6 to 8. The objective was to introduce them to fundamental electrical concepts and safety practices. The training covered essential topics such as understanding circuits, identifying different electrical components, and learning about their functions. Practical demonstrations included assembling simple circuits and using basic tools like multimeters. The students showed keen interest and actively participated in hands-on activities, enhancing their understanding through practical application. Safety guidelines were emphasized throughout to ensure responsible handling of electrical items. The session concluded with a Q&A segment, where students clarified their doubts. Overall, the training was successful in imparting foundational electrical knowledge and skills.
