Calculations:

Value of total goodwill of the firm= Rs. 48,000

C's share of goodwill=  $48,000 \times 1/4 = \text{Rs.} 12,000$ 

Calculation of Sacrificing ratio: Sacrifice Ratio = Old ratio – New Ratio

A = 3/5 - 5/12 = (36-25)/60 = 11/60

B = 2/5 - 4/12 = (24-20)/60 = 4/60

Sacrifice Ratio = 11:4

- Retirement of a partner means a partner willingly moving out of a partnership firm.
- It is a case of Reconstitution of partnership hence all the provisions of Reconstitution will be applied here.
- When a partner retires from a firm, some adjustments are done as their economic relations have changed. The changes are:

Calculation of New Profit-Sharing Ratio and Gaining Ratio

Treatment of Goodwill as per AS-26

Treatment of Accumulated Profits and Reserves

Revaluation of Assets and Reassessment of Liabilities

Preparation of partners' capital A/c and Balance Sheet

Preparation of Retiring partner's Loan A/c

Adjustment of Capitals.

- Gaining Ratio = New Ratio Old Ratio
- When Either New Ratio is given or Gain of the remaining partners is given in the question, we calculate Gaining Ratio.
- If nothing of that type is discussed, Old Ratio will be the Gaining Ratio.
- Gaining Ratio is calculated in order to compensate the retiring partner, his share of Goodwill of the firm.

#### **Death of a Partner**

The partnership comes to an end immediately, whenever a partner dies although the firm may continue with the remaining partners. The deceased partner is entitled to get his share in the firm as per the provision of a partnership agreement. His share in the firm is calculated in the same manner as in the case of a retiring partner.

#### Computation of Deceased Partner's Share of Profit up to date of death:

#### • On the basis of time:

If a partner dies on any date after the date of the balance sheet, then his share of profits is calculated from the beginning of the year to the date of death on the basis of time of sales.

Deceased Partners' share of profit till date of death = (Number of Days or Months from the Date of last balance Sheet to the Date of Death/365 Days or 12 Months)

× Previous Year's Profits or Average Profits of a given Number of Past Years × Profit Share

#### • On the Basis of Turnover Sales:

Deceased Partner's share of profit till date of death = (Sales from the Date of the Last Balance Sheet to the Date of Death/Previous Year's Sales or Average Sales of a Given Number of Past Years)

× Previous Year's Profits of Average Profits of a Given Number of Past Years × Profit Share

Total Asset to Debt Ratio: Total Assets Long-Term Debts	This ratio measures the safety margin available to the suppliers of long-term debts.
Proprietary Ratio  Shareholder Funds X 100	This ratio shows the extent to which the total assets have been financed by the proprietor. Higher the ratio, greater the satisfaction for lenders and

Total Assets	creditors. Standard Ratio – 2:1.
<b>Interest Coverage Ratio</b>	Net Profit before Interest & Tax / Interest on long-term debts
= PBIT / Interest on LTD	<ul> <li>Higher ratio ensures safety of interest on debts</li> </ul>
	• It reveals the number of times interest on long-term debts is covered
	by the profits available for interest
Debt to Capital	Debt / (Debt + Shareholders' Equity)
<b>Employed Ratio</b>	
<b>Stock Turnover Ratio:</b>	This ratio measures how fast the stock is moving through the firm and
Cost of Goods Sold	generating sales. Higher the ratio, the more efficient management of
Average Stock	inventories and vice-versa. It is expressed in times.
<b>Debtors Turnover ratio:</b>	This ratio indicates economy and efficiency in the collection of amount due
Net Credit Sales	from debtors. Higher the ratio, better it is since it indicates that debts are
Average Accts Receivables	being collected more quickly.
Payable Turnover Ratio:	It indicates the number of times the creditors are turned over in relation to
Net Credit Purchases	purchases. A higher turnover ratio or shorter payment period shows the
Average Payable	availability of less credit or yearly payments.
Working Capital	This ratio shows the number of times the working capital has been
Turnover:	employed in the process of carrying on of business. Higher the ratio, better
COGS / Net Sales	the efficiency in the utilization of working capital.

#### **Answer to questions of CBSE 2024 (Compartment)**

- 01. (B) Sold inventory on credit ₹ 50,000
- 02. (B) Turnover ratios
- 03. Let the current liabilities be X then Current Assets = 3.5 X and Quick Assets = 2 X

Current Assets – Quick Assets = Inventories + Prepaid expenses

3.5X - 2.5X = 16,000 + 8,000;

1.5X = 24,000;

X = 24,000 / 1.5 = 16,000

- (1) Current Liabilities = X i.e. ₹ 16,000
- (2) Current Assets = 3.5X i.e.  $3.5 \times 16,000 = ₹ 56,000$

Net profit after tax was ₹ 3,00,000 and the tax amounted to ₹ 1,00,000.

#### **Answer to questions of CBSE 2025**:

- 01. (A) Comparative Statements OR (C) Turnover Ratios
- 02. (C) Issue of Debentures ₹ 6,00,000
- 03. Trade Payables Turnover Ratio = Net Purchases / Average Trade Payables

Let the credit purchases be X then cash purchases = 25% of X = X/4

Total purchases = Credit purchases + Cash purchases; 15,00,000 = X + X/4; = 15,00,000 = 5X/4 (15,00,000 x 4) / 5 = X; = 12,00,000 i.e. Credit Purchases = ₹ 12,00,000.

Trade Payables Turnover Ratio 4 times = Credit Purchases 12,00,000 / Average Trade Payables Average Trade Payables = 12,00,000 / 4 = ₹ 3,00,000.

Average Trade Payables = (Opening Trade Payables + Closing Trade Payables) / 2
Let the Opening Trade Payables be X then Closing Trade Payables = 2XAverage Trade Payables 3,00,000 = (X + 2X) / 2; 3,00,000 = 3X/2;  $3,00,000 \times 2 = 3X$  6,00,000 / 3 = X; Opening Trade Payables ₹ 2,00,000 and Closing Trade Payables ₹ 4,00,000.

OR

Return on Investments = (Profit before Interest and Tax / Capital Employed) x 100Profit before interest & tax = Net profit after tax + Tax + Interest on Debentures = 3,00,000 + 1,00,000 + 80,000 = ₹ 4,80,000Capital employed = Shareholders funds + Debentures; = 16,00,000 + 8,00,000 = ₹ 24,00,000

#### Ratio will improve, decline or no change: HINTS

- (1) Only Numerator increased or only Denominator decreased than ratio will improve. Current Ratio 2:1 i.e. 20,000 / 10,000 >> 25,000 / 10,000 Increase. >> 20,000 / 5,000 Increase
- (2) Only Numerator decreased or only Denominator increased than ratio will decline.
- (3) Numerator and Denominator increased with same figures, ratio will decline.

 $ROI = (4.80,000 / 24.00,000) \times 100 = 20\%$ 

(4) Numerator and Denominator decreased with same figures, ratio will improve.

#### Current Assets are Numerator & Current Liabilities are Denominator in Current Ratio.

☐ Current ratio is 2:1. State whether ratio will improve, decline or no change if a creditor of ₹ 5,000 has been paid.

**Ans.** & Hints: Assumed as the Current Assets is ₹ 20,000 & Current Liabilities ₹10,000.

Payment to creditor of ₹ 5,000 will reduce the current assets and current liabilities too.

Therefore, the proportion between them will be 15,000: 5,000. Thus, the new Current ratio will be 3:1. Hence, Current Ratio will be Improve.

- (a) Purchase of machinery for cash
- (b) Purchase of goods on credit
- (c) Sale of furniture at cost
- (d) Sale of goods at a profit
- (e) Redemption of debentures at a premium

#### **Solution**:

Question: (2) A Ltd has a current ratio 3.5:1 and quick ratio 2:1. If excess of current assets over quick assets represented by stock in ₹ 24,000. What is the value of Current Assets and Current Liabilities? **Answer:** Current Assets 56,000 & Current Liabilities 16,0000

Current Ratio = Current Assets / Current Liabilities:

3.5 / 1 = CA / CL;CA = 3.5 CL

Quick Ratio = Quick Assets / Current Liabilities;

2/1 = QA / CL;QA = 2 CL1.5 CL = 24,000;

Stock = CA - QA;24,000 = 3.5 CL - 2 CL;

CL = 24,000 / 1.5 = 16,000

3.5 / 1 = CA / 16,000;

 $CA = 3.5 \times 16,000$  $2/1 = QA/16,000; QA = 2 \times 16,000$ 

CA = 56,000OA = 32,000

Question: (3) Gross profit on cost of a firm is 40%. Working Capital Turnover Ratio is 5 times. Current Ratio is 2 and Current liabilities ₹ 40,000. Find the Gross Profits of the firm.

**Answer:** Working Capital Turnover Ratio = Cost of Goods Sold / Working Capital

Current ratio is 2 and Current liabilities is  $\stackrel{?}{\underset{?}{?}}$  40,000 then Current Assets = 40,000 x 2 =  $\stackrel{?}{\underset{?}{?}}$  80,000.

Working Capital = Current Assets – Current Liabilities; = 80,000 – 40,000 = ₹ 40,000

WCR = COGS/WC; 5 = COGS/40,000; COGS = 2,00,000

Gross profits = 40% of COGS = 40% of 2,00,000 = ₹80,000.
