

WATER CONSERVATION – AWARENESS PROGRAM

JAL PAKHWADA 16TH APRIL TO 30TH APRIL 2025

Water is one of the most fundamental natural resource required by all human beings. But it has always been taken as granted by all. Water is required for agriculture and is a natural habitat for all aquatic animals. We require water for our survival to promote and sustain good health.

Water conservation awareness among human beings is very important for preserving this precious resource. Simple actions like fixing leaks using low flow fixtures and harvesting rain water can help in reducing water wastage. Being mindful of water usage while bathing, cooking and cleaning is also very essential. Water efficient bathroom accessories like low flow shower heads, dual flush toilets systems, water saving faucets can be used. Instead of using water to defrost any refrigerator items, we should keep them outside prior to when we require it so that it defrosts by itself under room temperature.

Thus by adopting water saving practices sustainable future for generations to come. So let us all work together to conserve water and protect our planet's most valuable resource.
