

WRITEUP PHYSICS LABORATORY

The Laboratory of Physics imparts the physical basics of engineering science by means of meaningful experimental setups that provide valid quantitative measurement results. The focus is on kinematics, dynamics, vibration theory, fluid mechanics, thermodynamics, acoustics and optics.

Physics laboratory is a place where experiments of Physics are carried out. As we know physics is that branch of science where experimentation is an integral part of the core subject.

Physics is an experimental science. To provide an experimental foundation for the theoretical concepts introduced in the lectures. It is important that students have an opportunity to verify some of the ideas for themselves.

PM SHRI KV RRC FATEHGARH has a well-equipped Physics laboratory to demonstrate the theoretical concepts experimentally. We have apparatus as per CBSE and KVS guidelines. KVS provided us a lab equipment to modernize our labs.
